# ORGANIZATION OF COURSE CONTENTS & CREDIT REQUIREMENTS

#### **Code Numbers**

- All courses are divided into two series: 500-series courses pertain to Master's level, and 600-series to Doctoral level. A Ph. D. student must take a minimum of two 600 series courses, but may also take 500-series courses if not studied during Master's programme.
- Credit seminar for Master's level is designated by code no. 591, and the two seminars for Doctoral level are coded as 691 and 692, respectively.
- Similarly, 599 and 699 codes have been given for Master's research and Doctoral research, respectively.

#### **Course Contents**

The contents of each course have been organized into:

- Objective to elucidate the basic purpose.
- Theory units to facilitate uniform coverage of syllabus for paper setting.
- Suggested Readings to recommend some standard books as reference material. This does not unequivocally exclude other such reference material that may be recommended according to the advancements and local requirements.
- A list of journals pertaining to the discipline is provided at the end which may be useful as study material for 600-series courses as well as research topics.
- E-Resources for quick update on specific topics/events pertaining to the subject.
- Broad research topics provided at the end would facilitate the advisors for appropriate research directions to the PG students.

#### **Minimum Credit Requirements**

Subject	Master's programme	Doctoral programme
Major	20	15
Minor	09	08
Supporting	05	05
Seminar	01	02
Research	20	45
<b>Total Credits</b>	55	75
Compulsory Non Credit Courses	See relevant section	

Major subject: The subject (department) in which the students takes admission

**Minor subject:** The subject closely related to students major subject (e.g., if the major subject is Entomology, the appropriate minor subjects should be Plant Pathology & Nematology).

**Supporting subject:** The subject not related to the major subject. It could be any subject considered relevant for student's research work.

**Non-Credit Compulsory Courses**: Please see the relevant section for details. Six courses (PGS 501-PGS 506) are of general nature and are compulsory for Master's programme. Ph. D. students may be exempted from these courses if already studied during Master's degree.

#### **COMPULSORY NON-CREDIT COURSES**

(Compulsory for Master's programme in all disciplines; Optional for Ph.D. scholars)

CODE	COURSE TITLE	CREDITS
PGS 501	LIBRARY AND INFORMATION SERVICES	0+1
PGS 502	TECHNICAL WRITING AND COMMUNICATIONS SKILLS	0+1
PGS 503 (e-Course)	INTELLECTUAL PROPERTY AND ITS MANAGEMENT IN AGRICULTURE	1+0
PGS 504	BASIC CONCEPTS IN LABORATORY TECHNIQUES	0+1
PGS 505 (e-Course)	AGRICULTURAL RESEARCH, RESEARCH ETHICS AND RURAL DEVELOPMENT PROGRAMMES	1+0
PGS 506 (e-Course)	DISASTER MANAGEMENT	1+0

#### **Course Contents**

#### PGS 501 LIBRARY AND INFORMATION SERVICES 0+1

#### **Objective**

To equip the library users with skills to trace information from libraries efficiently, to apprise them of information and knowledge resources, to carry out literature survey, to formulate information search strategies, and to use modern tools (Internet, OPAC, search engines etc.) of information search.

#### **Practical**

Introduction to library and its services; Role of libraries in education, research and technology transfer; Classification systems and organization of library; Sources of information- Primary Sources, Secondary Sources and Tertiary Sources; Intricacies of abstracting and indexing services (Science Citation Index, Biological Abstracts, Chemical Abstracts, CABI Abstracts, etc.); Tracing information from reference sources; Literature survey; Citation techniques/Preparation of bibliography; Use of CD-ROM Databases, Online Public Access Catalogue and other computerized library services; Use of Internet including search engines and its resources; e-resources access methods.

### PGS 502 TECHNICAL WRITING AND COMMUNICATIONS SKILLS 0+1 Objective

To equip the students/scholars with skills to write dissertations, research papers, etc.

To equip the students/scholars with skills to communicate and articulate in English (verbal as well as writing).

#### **Practical**

**Technical Writing** - Various forms of scientific writings- theses, technical papers, reviews, manuals, etc; Various parts of thesis and research communications (title page, authorship contents page, preface, introduction, review of literature, material and methods, experimental results and discussion); Writing of abstracts, summaries, précis, citations commonly used abbreviations in the theses and research communications; illustrations, photographs and drawings with suitable captions; pagination, numbering of tables and illustrations; Writing of numbers and dates in scientific write-ups; Editing and proof-reading; Writing of a review article. Communication Skills - Grammar (Tenses, parts of speech, clauses, punctuation marks); Error analysis (Common errors): Concord: Collocation; Phonetic symbols and transcription; Accentual pattern: Weak forms in connected speech: Participation in group discussion: Facing an interview: presentation of scientific papers.

#### **Suggested Readings**

Collins' Cobuild English Dictionary. 1995. Harper Collins.

Gordon HM & Walter JA. 1970. *Technical Writing*. 3<sup>rd</sup> Ed. Holt, Rinehart & Winston.

Hornby AS. 2000. Comp. Oxford Advanced Learner's Dictionary of Current English. 6<sup>th</sup> Ed. Oxford University Press.

James HS. 1994. Handbook for Technical Writing. NTC Business Books.

Joseph G. 2000. *MLA Handbook for Writers of Research Papers*. 5<sup>th</sup> Ed. Affiliated East-West Press.

Mohan K. 2005. Speaking English Effectively. MacMillan India.

Richard WS. 1969. Technical Writing. Barnes & Noble.

Robert C. (Ed.). 2005. Spoken English: Flourish Your Language. Abhishek.

Sethi J & Dhamija PV. 2004. *Course in Phonetics and Spoken English*. 2<sup>nd</sup> Ed. Prentice Hall of India.

Wren PC & Martin H. 2006. High School English Grammar and Composition. S. Chand & Co.

#### PGS 503 (e-Course)

### INTELLECTUAL PROPERTY AND ITS MANAGEMENT IN AGRICULTURE

1+0

#### **Objective**

The main objective of this course is to equip students and stakeholders with knowledge of intellectual property rights (IPR) related protection systems, their significance and use of IPR as a tool for wealth and value creation in a knowledge-based economy.

#### **Theory**

Historical perspectives and need for the introduction of Intellectual Property Right regime; TRIPs and various provisions in TRIPS Agreement; Intellectual Property and Intellectual Property Rights (IPR), benefits of securing IPRs; Indian Legislations for the protection of various types of Intellectual Properties; Fundamentals of patents, copyrights, geographical indications, designs and layout, trade secrets and traditional knowledge, trademarks, protection of plant varieties and farmers' rights and biodiversity protection; Protectable subject matters, protection in

biotechnology, protection of other biological materials, ownership and period of protection; National Biodiversity protection initiatives; Convention on Biological Diversity; International Treaty on Plant Genetic Resources for Food and Agriculture; Licensing of technologies, Material transfer agreements, Research collaboration Agreement, License Agreement.

#### **Suggested Readings**

- Erbisch FH & Maredia K.1998. *Intellectual Property Rights in Agricultural Biotechnology*. CABI.
- Ganguli P. 2001. Intellectual Property Rights: Unleashing Knowledge Economy. McGraw-Hill.
- Intellectual Property Rights: Key to New Wealth Generation. 2001. NRDC & Aesthetic Technologies.
- Ministry of Agriculture, Government of India. 2004. *State of Indian Farmer*. Vol. V. *Technology Generation and IPR Issues*. Academic Foundation.
- Rothschild M & Scott N. (Ed.). 2003. Intellectual Property Rights in Animal Breeding and Genetics. CABI.
- Saha R. (Ed.). 2006. Intellectual Property Rights in NAM and Other Developing Countries: A Compendium on Law and Policies. Daya Publ. House.

The Indian Acts - Patents Act, 1970 and amendments; Design Act, 2000; Trademarks Act, 1999; The Copyright Act, 1957 and amendments; Layout Design Act, 2000; PPV and FR Act 2001, and Rules 2003; National Biological Diversity Act, 2003.

#### PGS 504 BASIC CONCEPTS IN LABORATORY TECHNIQUES 0+1

#### **Objective**

To acquaint the students about the basics of commonly used techniques in laboratory.

#### **Practical**

Safety measures while in Lab; Handling of chemical substances; Use of burettes, pipettes, measuring cylinders, flasks, separatoryfunnel, condensers, micropipettes and vaccupets; washing, drying and sterilization of glassware; Drying of solvents/chemicals. Weighing and preparation of solutions of different strengths and their dilution; Handling techniques of solutions; Preparation of different agro-chemical doses in field and pot applications; Preparation of solutions of acids; Neutralisation of acid and bases; Preparation of buffers of different strengths and pH values. Use and handling of microscope, laminar flow, vacuum pumps, viscometer, thermometer, magnetic stirrer, micro-ovens, incubators, sandbath, waterbath, oilbath; Electric wiring and earthing. Preparation of media and methods of sterilization; Seed viability testing, testing of pollen viability; Tissue culture of crop plants; Description of flowering plants in botanical terms in relation to taxonomy

#### **Suggested Readings**

Furr AK. 2000. CRC Hand Book of Laboratory Safety. CRC Press.

Gabb MH & Latchem WE. 1968. A Handbook of Laboratory Solutions. Chemical Publ. Co.

#### PGS 505 (e-Course)

#### AGRICULTURAL RESEARCH, RESEARCH ETHICS AND RURAL DEVELOPMENT PROGRAMMES

#### **Objective**

To enlighten the students about the organization and functioning of agricultural research systems at national and international levels, research ethics, and rural development programmes and policies of Government.

#### Theory

#### UNIT I

History of agriculture in brief; Global agricultural research system: need, scope, opportunities; Role in promoting food security, reducing poverty and protecting the environment; National Agricultural Research Systems (NARS) and Regional Agricultural Research Institutions; Consultative Group on International Agricultural Research (CGIAR): International Agricultural Research Centres (IARC), partnership with NARS, role as a partner in the global agricultural research system, strengthening capacities at national and regional levels; International fellowships for scientific mobility.

#### UNIT II

Research ethics: research integrity, research safety in laboratories, welfare of animals used in research, computer ethics, standards and problems in research ethics.

#### UNIT III

Concept and connotations of rural development, rural development policies and strategies. Rural development programmes: Community Development Programme, Intensive Agricultural District Programme, Special group – Area Specific Programme, Integrated Rural Development Programme (IRDP) Panchayati Raj Institutions, Co-operatives, Voluntary Agencies/Non-Governmental Organisations. Critical evaluation of rural development policies and programmes. Constraints in implementation of rural policies and programmes.

#### **Suggested Readings**

Bhalla GS & Singh G. 2001. *Indian Agriculture - Four Decades of Development*. Sage Publ.

Punia MS. Manual on International Research and Research Ethics. CCS, Haryana Agricultural University, Hisar.

Rao BSV. 2007. Rural Development Strategies and Role of Institutions - Issues, Innovations and Initiatives. Mittal Publ.

Singh K.. 1998. Rural Development - Principles, Policies and Management. Sage Publ.

### PGS 506 (e-Course)

#### **DISASTER MANAGEMENT**

1+0

1+0

#### **Objectives**

To introduce learners to the key concepts and practices of natural disaster management; to equip them to conduct thorough assessment of hazards, and risks vulnerability; and capacity building.

#### Theory

#### UNIT I

Natural Disasters- Meaning and nature of natural disasters, their types and effects. Floods, Drought, Cyclone, Earthquakes, Landslides, Avalanches, Volcanic eruptions, Heat and cold Waves, Climatic Change: Global warming, Sea Level rise, Ozone Depletion

#### UNIT II

Man Made Disasters- Nuclear disasters, chemical disasters, biological disasters, building fire, coal fire, forest fire. Oil fire, air pollution, water pollution, deforestation, Industrial wastewater pollution, road accidents, rail accidents, air accidents, sea accidents.

#### UNIT III

Disaster Management- Efforts to mitigate natural disasters at national and global levels. International Strategy for Disaster reduction. Concept of disaster management, national disaster management framework; financial arrangements; role of NGOs, Community-based organizations, and media. Central, State, District and local Administration; Armed forces in Disaster response; Disaster response: Police and other organizations.

#### **Suggested Readings**

- Gupta HK. 2003. *Disaster Management*. Indian National Science Academy. Orient Blackswan.
- Hodgkinson PE & Stewart M. 1991. Coping with Catastrophe: A Handbook of Disaster Management. Routledge.
- Sharma VK. 2001. *Disaster Management*. National Centre for Disaster Management, India.

## NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

### Basic sciences

Biochemistry Microbiology Plant Physiology

Gujarat Agricultural Universities, Gujarat (Anand, Sardarkrushinagar, Navsari, Junagadh) May 2010

#### **EXECUTIVE SUMMARY**

#### **Biochemistry**

- O Course curricula and course outlines in biochemistry are designed in view of the fact that biochemistry courses are offered by students from almost all disciplines of faculties of agriculture, veterinary sciences, home science, forestry, fisheries and even technology. Thus the course Biochem 501 is a basic course to be offered to students taking biochemistry as a major or minor subject and also to students from other disciplines, who offer only one course in biochemistry.
- O All courses are designed as per NCG guidelines and to cover all basic topics. New courses on Immunochemistry, Advanced Molecular Biology, Biochemistry of Biotic and Abiotic Stress, Functional Genomics and Metabolomics, Carbon and Nitrogen Metabolism, Current TopicsinBiochemistry and Advanced Techniques in Biochemistry are framed in view of the recent developments in the subject.
- o More emphasis is given on practicals at M. Sc level courses; the ratio of lectures to lab is 23:8 for 500 series and 14:2 for 600 series courses.
- o Biochemistry courses are offered by a large number of students hence need small equipment in multiple numbers. To do quality teaching and research, sophisticated equipments like ultra low freezers, high speed refrigerated and ultra-centrifuges, automated bioseparation systems like GLC or HPLC and UV-Vis spectrophotometers suitable for enzyme studies, PCRs, electrophoresis systems for proteins and DNA are required for Biochemistry lab. Consumables will also be needed accordingly. In most of the SAUs, the biochemistry labs may also need renovation as per GLP norms. An approximate total budget of Rs. 5.0 lacs per annum apart from one time equipment grant of Rs. 50.00 lacs will be required.

#### Chemistry

- The present day scenario is to encourage the growth of high quality interdisciplinary research, which now thrives in many institutions. The interfaces between Chemistry (as a strong core discipline) and Physics, Biology, Materials and Engineering have strengthened. The interaction with biology for example, involves not just Synthetic Organic Chemistry but Spectroscopy, Physical, Inorganic, The oretical and Computational Chemistry. Such interactions are essential since the major task of deriving scientific and commercial value from recent advances in genomics and proteomics require massive inputs from chemistry and computing. Similar comments apply to Photonics, Molecular Electronics, Biomaterials and Nanotechnology. In view of useful interdisciplinary research, it is essential to revise the Chemistry Courses so that the outgoing student has a better grip on interdisciplinary teaching and research.
- There are several recent advances in Chemistry including Green Chemistry which deals with environmental like issues involving: chemical technology of waste, pollution, solventless reactions, catalysis, biocatalysis, benign syntheses and alternate energy sources. Another recent area is modern spectroscopy, which deals with techniques like GCMS, LCMS, FABMS, which enable us to determine the molecular mass from a pinch of the compound. It is possible to arrive at the structure of the naturally occurring organic molecule by using modern techniques like <sup>1</sup>H NMR, CMR and DNMR. The present courses have been revised to take care of the various such new areas.
- o The revised courses cover the areas: Green Chemistry, Dynamics of Inorganic

Reactions, Spectroscopy, Organic Syntheses, Computers in Chemistry, Quantum Mechanics, Polymers, Macromolecules, Catalysis, Bioorganic Chemistry, Drugs and Dyes, Reactions and Rearrangements, Photochemistry, Preparations, Analysis, Nuclear Chemistry, Nonaqueous Solvents, Colloidal Chemistry, Biophysical Chemistry; Experiments on pH meter, conductometer, potentiometer, flamephotometry, refractometer, polarography, chromatography; Natural Products Chemistry, Physical Organic Chemistry, Coordination Chemistry, Chemical Kinetics, Surface Chemistry and Thermodynamics.

- The UGC recommendations for PG courses have been taken into consideration in framing these courses. It is hoped that these will prove very useful to the future students.
- Chemistry courses are offered by a large number of students of Engineering stream besides Basic Science students. To do quality teaching and research, sophisticated equipments like GCMS, LCMS to determine molecular masss of a compound from a pinch of sample is required. NMR, CMR, can be used to determine the structure of naturally occurring organic molecule. An approximate total budget of Rs. 5.0 lacs per annum apart from one time equipment grant of Rs. 1 Crore will be required.

#### Microbiology

- Microbes are indispensable to our life. Interactions of microbes involved in soil, environment, food, fermentation, medical, or agriculture has been studied using modern techniques. New antibiotics, vaccines are also being produced. Moreover genome sequence of important genes of interest or complete sequence of microbes, plants, human beings or animals has further paved the ways for detailed study of interactions and their manipulations in the desired direction. Molecular analysis of relevant factors in the plant and microbes and components that modulate plant-microbe interactions for soil and plant health for sustaining crop productivity is now being revealed using different molecular techniques. Microbial diagnostic micro arrays has beendeveloped for the parallel, high-throughput identification of many microorganisms.
- O Great emphasis is also being given on integrated use of chemical fertilizers, pesticides, herbicides along with biofertilizers, biopesticides and biocontrol agents for sustaining modern agriculture and soil health. Biocontrol agents for control of plant diseases, insects, nemotodes have been developed and some of these are commercially available & being used by the farmers. Microbe plant symbiosis within plant rhizosphere have come up as an effective clean up technology. Increased attention has been directed towards use of microorganisms (bioremediation) for wastewater treatment mainly decolorization of different industrial effluents, which include distillery waste, textile industries & paper & pulp industries. Microbial degradation & decolorization holds promise and can be exploited. But genetic improvement of strains can be explored in future for improving their decolorization efficiency. Some of the agro wastes are being used for the production of biofuels. Use of recombinant microorganisms for industrial production of useful compounds has reached at commercial levels. All these aspects are covered in the course curricula.
- O Microbiology courses are offered by a large number of students hence need small equipment in multiple numbers. To do quality teaching and research, sophisticated equipment like ultra low freezers, high speed refrigerated-automated bioseparation systems like GLC or HPLC and UV-Vis spectrophotometers suitable for enzyme studies, PCRs, electrophoresis systems for proteins and DNA are required for Microbiology lab.

Consumables will also be needed accordingly. An approximate total budget of Rs. 5.0 lacs per annum apart from one time equipment grant of Rs. 50.00 lacs will be required.

#### **Plant Physiology**

- o In agricultural universities and crop specific Institutes, the major mandate is crop improvement. Therefore, post graduate degree programme in plant physiology / crop Physiology was started in many Agricultural Universities with an objective to impart required training and adequate exposure to the graduates who ultimately assist in national and state level crop improvement programmes. From this context the course curricula is constantly being modified over the years to address the issues of crop improvement by exploiting well characterized crop physiological processes. Since, last 20 years phenomenal progress has taken place in understanding the plant physiological processes at molecular level and provided several comprehensive molecular biology options to modify growth and developmental processes. Adoption of these developments necessitates a strong exposure to tools of modern biology to addressspecific issues of crop growth and developments. This emphasizes the need for reorientation of the courses to encompass molecular biology also as an integral component of plant and crop physiology. The course structure thus consists of:
- o A basic course for both majoring in plant Physiology as a beginner course as well as for students choosing Plant physiology as minor subject or offering only single course.
- Ocurses are framed on various aspects of plant physiology that include physiology (with molecular bias) of plant growth and yield modeling, physiology of development, stress, post harvest, seed and weed, photosynthesis, mineral nutrition, morphogenesis, signal transduction, genome structure and functional genomics.
- Separate Courses on Climate Change and Crop Growth, Molecular Approaches for Improving Physiological Traits and Techniques in Plant Physiology are included as Ph. D. level courses.
- Plant Physiology courses are offered by a large number of students hence need small equipment in multiple numbers. To do quality teaching and research, sophisticated equipment like ultra low freezers, high speed refrigerated-centrifuge, IRGA, Consumables will also be needed accordingly.. An approximate total budget of Rs. 5.0 lacs per annum apart from one time equipment grant of Rs. 50.00 lacs will be required.

#### **BIOCHEMISTRY**

#### Course Structure -at a Glance

CODE	COURSE TITLE	CREDITS
BIOCHEM 501*^	BASIC BIOCHEMISTRY	3+1
BIOCHEM 502*	INTERMEDIARY METABOLISM	3+0
BIOCHEM 503*	ENZYMOLOGY	2+1
BIOCHEM 504	MOLECULAR BIOLOGY	2+1
BIOCHEM 505*	BIOCHEMICAL TECHNIQUES	1+2
BIOCHEM 506	IMMUNO CHEMISTRY	2+1
BIOCHEM 507	PLANT BIOCHEMISTRY	3+0

BIOCHEM 606	BIOMEMBRANES	2+0
BIOCHEM 607**	ADVANCED TECHNIQUES IN BIOCHEMISTRY	0+2
BIOCHEM 691	DOCTORAL SEMINAR I	1+0
BIOCHEM 692	DOCTORAL SEMINAR II	1+0
BIOCHEM 699	DOCTORAL RESEARCH	45

<sup>\*</sup>Compulsory for Master's programme; \*\* Compulsory for Doctoral programme ^ Open for PG students of other discipline

**Note:** BBIOCHEM 501 BASIC BIOCHEMISTRY be considered as optional course for those who had obtained degree in Biochemistry /Microbiology /Biotechnology at B.Sc /M.Sc level

### BIOCHEMISTY Course Contents

#### BIOCHEM 501 BASIC BIOCHEMISTRY

3+1

#### **Objective**

To provide elementary knowledge/overview of structure and functions and metabolism of biomolecules.

#### **Theory**

#### UNIT I

Scope and importance of biochemistry in agriculture; Fundamental principles governing life; structure of water; acid base concept and buffers; pH; hydrogen bonding; hydrophobic, electrostatic and Van der Waals forces; General introduction to physical techniques for determination of structure of biopolymers.

#### UNIT II

Classification, structure and function of carbohydrates, lipids and biomembranes, amino acids, proteins, and nucleic acids.

#### UNIT III

Structure and biological functions of vitamins, enzymes classification and mechanism of action; regulation, factors affecting enzyme action. Hormones animal plants and insects, Fundamentals of thermodynamic principles applicable to biological processes, Bioenergetics.

#### UNIT IV

Metabolism of carbohydrates, photosynthesis and respiration, oxidative phosphorylation, lipids, proteins and nucleic acids. DNA replication, transcription and translation; recombinant DNA technology

#### **Practical**

Preparation of standard and buffer solutions, Extraction and estimation of sugars, Amino acids, Estimation of Proteins by Lowry's method,

Estimation of DNA and RNA by diphenylamine and orcinol methods

Estimation of Ascorbic acid, Separation of biomolecules by TLC and Paper chromatography.

#### **Suggested Readings**

Conn EE & Stumpf PK. 1987. Outlines of Biochemistry. John Wiley.

Metzler DE. 2006. Biochemistry. Vols. I, II. Wiley International.

Nelson DL & Cox MM. 2004. *Lehninger Principles of Biochemistry*. 4<sup>th</sup> Ed. MacMillan.

Voet D, Voet JG & Pratt CW. 2007. Fundamentals of Biochemistry. John Wiley.

#### BIOCHEM 502 INTERMEDIARY METABOLISM

3+0

#### **Objective**

To teach metabolic pathways, their regulation and engineering, and methods used in their elucidation.

#### Theory

#### <u>UNIT I</u>

The living cell a unique chemical system, Introduction to metabolism, methods of studying metabolism, transport mechanism, bioenergetics, biological oxidation, signal transduction.

#### UNIT II

Catabolic and anabolic pathways of carbohydrates, lipids, regulation and their metabolic disorders. Energy transduction and oxidative phosphorylation.

#### UNIT III

General reactions of amino acid metabolism, Degradative and biosynthetic pathways of amino acids and their metabolic disorders. Sulphur metabolism, Metabolic engineering concepts.

#### **UNIT IV**

Compartmentation of metabolic pathways, metabolic profiles of major organs and regulation of metabolic pathways.

#### **Suggested Readings**

Berg JM, Tymoczko JL, Stryer L & Clarke ND 2000. *Biochemistry*. 5<sup>th</sup> Ed. WH Freeman & Co.

Metzler DE. 2006. Biochemistry. Vols. I, II. John Wiley.

Voet D, Voet JG & Pratt CW. 2007. Fundamentals of Biochemistry. John Wiley.

Zubey GL. 1998. Biochemistry. 4<sup>th</sup> Ed. WCB London.

#### BIOCHEM 503 ENZYMOLOGY

2+1

#### **Objective**

To impart knowledge about the catalytic role of enzymes, their structure, physico-chemical, kinetic and regulatory properties and mechanism of action.

#### Theory

#### UNIT I

Introduction and historic perspective, Enzyme nomenclature and classification, enzyme compartmentalization in cell organelles, isolation and purification of enzymes, measurement of enzyme activity. ribozymes, isozymes, abzymes,

#### UNIT II

Enzyme structure, enzyme specificity, active site, active site mapping, mechanism of enzyme catalysis. cofactors, coenzymes- their structure and role.

#### **UNIT III**

Enzyme kinetics, enzyme inhibition and activation, multienzyme complexes, allosteric enzymes and their kinetics, regulation of enzyme activity.

#### UNIT IV

Isolation and purification of enzymes, Applications of enzymes in chemical and food industry, enzyme immobilization, biosensors and clinical applications of enzymes.

#### **Practical**

Enzyme assay by taking any model enzyme like alpha-amylase or acid phosphatase, isolation and purification of any model enzyme like alpha-amylase or acid phosphatase, study of the effect of enzyme and substrate concentrations and determination of Km and Vmax, determination of pH

and temperature optima and effect of various inhibitors, determination of the pH and temperature stability of enzyme.

#### **Suggested Readings**

Bergmeyer HU. 1983. *Methods of Enzymatic Analysis*. Vol. II. Verlag Chemie, Academic Press.

Dixon M, Webb EC, Thorne CJR & Tipton KF. 1979. *Enzymes*. 3<sup>rd</sup> Ed. Longman.

Wilson K & Walker J. (Eds.). 2000. *Principles and Techniques of Practical Biochemistry*. 5<sup>th</sup> Ed. Cambridge Univ. Press.

#### BIOCHEM 504 MOLECULAR BIOLOGY

2+1

**Objective** 

To provide knowledge regarding genes, their functions, expression, regulation and transfer in heterologous systems.

#### **Theory**

#### UNIT I

Historical development of molecular biology, nucleic acids as genetic material, chemistry and structure of DNA and RNA, Genome organization in prokaryotes and eukaryotes, chromatin structure and function.

#### UNIT II

DNA replication, DNA polymerases, topoisomerases, DNA ligase, reverse transcriptase, repetitive and non-repetitive DNA, satellite DNA; transcription process, RNA editing, RNA processing.

#### UNIT III

Ribosomes structure and function, organization of ribosomal proteins and RNA genes, genetic code, aminoacyl tRNA synthases' inhibitors of replication, transcription and translation; translation and Post translational modification; nucleases and restriction enzymes, regulation of gene expression in prokaryotes and eukaryotes, molecular mechanism of mutation.

#### **UNIT IV**

DNA sequencing, recombinant DNA technology, vectors, isolation of genes, recombinants vector, selection of recombinants, PCR; general features of replication, transcription, site directed mutagenesis and translation in eukaryotes.

#### **Practical**

Isolation and purification of DNA and RNA from different sources, check of purity of isolated DNA and RNA, restriction fragmentation and separation of oligos by agarose electrophoresis,RAPD analysis of DNA, cDNA synthesis using PCR, Southern and Northern blotting experiments

#### **Suggested Readings**

### BIOCHEM 505 TECHNIQUES IN BIOCHEMISTRY 1+2 Objective

To impart practical knowledge about various techniques used in purification and characterization and estimation of cellular constituents.

#### Theory

#### UNIT I

Chromatographic and electrophoretic methods of separation, Principles and applications of Paper, Thin layer & HPTLC, Gas, Gas-liquid, Liquid chromatography, HPLC and FPLC; Paper and gel electrophoresis, Different variants of polyacrylamide gel electrophoresis (PAGE) like native and SDS-PAGE, 2D-PAGE, capillary electrophoresis.

#### UNIT II

Spectrophotometry: Principles and applications UV-Visible, Fluorescence, IR and FTIR, Raman, NMR and FTNMR, ESR and X-Ray spectroscopy.

#### <u>UNIT III</u>

Hydrodyanmic methods of separation of biomolecules such as viscosity and sedimentation- their principles, variants and applications.

#### **UNIT IV**

Tracer techniques in biology: Concept of radioactivity, radioactivity counting methods with principles of different types of counters, concept of  $\alpha$ ,  $\beta$  and  $\gamma$  emitters, scintillation counters,  $\gamma$ -ray spectrometers, autoradiography, applications of radioactive tracers in biology, principles and applications of phosphor imager.

#### **Practical**

Determination of absorption maxima of some important chemicals from their absorption spectra, estimation of biomolecule using spectrophotometer, Separation of carbohydrates and amino acids by paper chromatography, Separation of lipids by thin layer and column chromatography, Separation of proteins by ion exchange and gel filtration chromatography, Electrophoretic techniques to separate proteins and nucleic acids ,Centrifugation- Cell fractionation, Application of GLC,

HPLC, FPLC in separation of biomolecules, Use of radioisotopes in metabolic studies.

#### BIOCHEM 506 IMMUNOCHEMISTRY

2+1

#### **Objective**

To give an insight into the biochemical basis of immunity.

#### Theory

#### UNIT I

History and scope of immunology, antigens, adjuvants, immune system, organs, tissues and cells, immunoglobulins, molecular organization of Immunoglobulin.

#### UNIT II

Classes of antibodies, Antibody diversity, theories of generation of antibody diversity, Vaccine, Monoclonal antibodies, polyclonal antibodies, Hybridoma, Recombinant antibodies, complement system- classical and alternate.

#### UNIT III

Cellular interactions in the immune response, major histocompatibility complex, cell mediated immune response, cytokines.

#### UNIT IV

Immunoregulation, immunological tolerance, hypersensitivity, mechanisms of immunity, innate resistance and specific immunity. Current immunological techniques-ELISA, RIA

#### **Practical**

Handling, inoculation and bleeding of laboratory animals, Preparation of antigens and antisera, natural antibodies, Carbon clearance test, lymphoid organs of the mouse, Morphology of the blood leucocytes, separation of lymphocytes from blood, viable lymphocyte count, Antigen-antibody agglutination, interaction, precipitation, direct and indirect haemagglutination, Immunoelectrophoresis, Complement fixation, Quantitation of immunoglobulins by zinc sulphate turbidity and single radial immunodiffusion.

#### **Suggested Readings**

Male D, Brostoff J, Roth DB & Roitt I. 2006. *Immunology*. 7<sup>th</sup> Ed. Elsevier.

#### BIOCHEM 507 PLANT BIOCHEMISTRY

3+0

#### **Objective**

Detailed information about biochemical and molecular basis of various plant processes and plant growth regulatory substances.

#### Theory

#### UNIT I

Scope and importance of biochemistry in Agriculture, Plant cell organelles and their separation, structure and function of cell organelle. Photosynthetic pigments in relation to their functions, photosynthesis,  $C_3$ ,  $C_4$  and CAM pathways, photorespiration.

#### UNIT II

Sucrose-starch interconversion, biosynthesis of structural carbohydrates, storage proteins and lipids. Biochemistry of nitrogen fixation and nitrate assimilation, sulphate reduction and incorporation of sulphur in to amino acids.

#### **UNIT III**

Biochemistry of seed germination and development, Biochemistry of fruit ripening, phytohormones and their mode of action, signal transduction.

#### UNIT IV

Biochemistry and significance of secondary metabolites-cyanogenic glycosides, glucosinolates, phenolic compounds, terpenoids, alkaloids, plant defense system.

#### **Suggested Readings**

Buchanan BB, Gruissem W & Jones RL. 2000. *Biochemistry and Molecular Biology of Plants*. 2<sup>nd</sup> Ed. John Wiley.

Dey PM & Harborne JB. 1997. *Plant Biochemistry*. Academic Press. Goodwin TW & Mercer EI. 1983. *Introduction to Plant Biochemistry*. Pergamon Press.

Heldt HS. 1997. *Plant Biochemistry and Molecular Biology*. Oxford Univ. Press.

Lea PJ & Leegood RC. 1993. *Plant Biochemistry and Molecular Biology*. 2<sup>nd</sup> Ed. John Wiley.

#### BIOCHEM 508 ANIMAL BIOCHEMISTRY

3+0

#### **Objective**

To impart knowledge regarding biochemistry of various physiological processes, specialized tissues and hormone action in animal system.

#### **Theory**

#### UNIT I

Digestion and absorption of food, Vitamins,, Detoxification, biochemistry of specialized tissues – connective tissue, skin, muscle, nervous tissue and blood and other body fluids.

#### UNIT II

Water, electrolyte and acid-base balance, biochemistry of respiration, structure, function and mechanism of major trace elements.

#### UNIT III

Hormones of thyroid, hypothalamus, pituitary, pancreas, adrenals and sex hormones, Membrane receptors of hormones, signal transduction, biochemistry of reproduction.

#### UNIT IV

Immune systems, immunoglobulins, monoclonal antibodies, formation of antibody, antibody diversity, complement system – classical and alternate, major histocompatibility complexes, cell mediated immune response, mechanisms of immunity.

#### **Suggested Readings**

Devlin TM. 2006. *Text Book of Biochemistry with Clinical Correlations*. 6<sup>th</sup> Ed. John Wiley.

Goldsby RA, Kindt TJ, Kuby J & Osborne BA. 2003. *Immunology*. 4<sup>th</sup> Ed. WH Freeman. & Co.

Harper H. A. 2000. Physiological Chemistry. MacMillan.

Buchanan BB, Gruissem W & Jones RL. 2000. *Biochemistry and Molecular Biology of Plants*. 2<sup>nd</sup> Ed. John Wiley.

### BIOCHEM 509 FOOD AND NUTRITIONAL BIOCHEMISTRY

2+1

#### **Objective**

To impart knowledge regarding the biochemical aspects of various nutrients and their interactions in foods during processing, storage and deterioration.

#### Theory

#### UNIT I

Fundamentals of humam nutrition, concept of balanced diet, biochemical composition, energy and food value of various food grains (including cereals, pulses, oilseeds), fruits and vegetables. Physico-chemical, functional and nutritional characteristics of carbohydrates, proteins and fats and their interactions (emulsions, gelation, browning etc.).

#### UNIT II

Biochemical and nutritional aspects of vitamins, minerals Nutraceuticals, antinutritional factors, biochemistry of post harvest storage.

#### UNIT III

Effect of cooking, processing and preservation of different food products on nutrients, biochemical aspects of food spoilage, role of lipase and lipoxygenase, oxidative rancidity and antioxidants.

#### **UNIT IV**

Enzymes in food industry, food additives (coloring agents, preservatives etc.), biogenesis of food flavours and aroma, nutritional quality of plant, dairy, poultry and marine products.

#### **Practical**

Estimation of starch, lipid/oil, phenols in plant tissue/sample, Estimation of carotenoids, Estimation of Trypsin and chymotrypsin inhibitor activities in

seeds, Estimation of Vitamin C in fruits, Reducing & non reducing sugar in fruits, Estimation of protein contents, Estimation of dietary fibre, Determination of limiting amino acids, Estimation of Phytate/Oxalate.

#### **Suggested Readings**

Alais C & Lindel G. 1995. Food Biochemistry. Amazon Springer.

DeMan JM. 1999. Principles of Food Chemistry. 3<sup>rd</sup> Ed. Springer.

Fennema OR. 1996. Food Chemistry. 3rd Ed. CRC Press.

Hulme AC. (Ed.). 1970. *Biochemistry of Fruits and Vegetables and their Products*. Vols. I, II. Academic Press.

Ranganna S. (Ed.). 1986. *Handbook of Analysis and Quality for Fruits and Vegetable Products*. Tata McGraw Hill.

Robinson DS. 1987. Food Biochemistry and Nutritional Value. Longman.

#### BIOCHEM 510 CARBON AND NITROGEN METABOLISM 2+1

#### **Objective**

To impart knowledge of general carbon and nitrogen metabolism in plants with special reference to starch and cell wall polysaccharides and biological nitrogen fixation and assimilatory pathways.

#### **Theory**

#### UNIT I

Carbon metabolism: Synthesis of sucrose, Regulation of sucrose phosphate synthesis, Transport of sucrose, phloem loading and unloading, synthesis of starch in leaves and seeds, concept of transitory starch.

#### UNIT II

Synthesis of fructose, galactomannans raffinose series oligosaccharides and trehalose.

#### **UNIT III**

Nitrogen cycle- Biochemistry of nitrate assimilation and its regulation, GS/GOGAT and GDH pathway, ureides and amides as nitrogen transport compounds, chemoautotrophy in denitrifying bacteria.

#### UNIT IV

Biological nitrogen fixation; structure function and regulation of nitrogenase; nif genes and their regulation; biochemical basis of legume-Rhizobium symbiosis, genes involved in synthesis.

#### **Practical**

Estimation of nitrite content, Estimation of protein by Lowry's method, Estimation of starch, Estimation of nitrate content by hydrazine sulphate reduction method, in vivo assay of nitrate reductase activity, in vitro assay of nitrate reductase activity, in vitro assay of glutamine synthetase activity, in vitro assay of glutamate synthase and glutamate dehydrogenase activity, Estimation of ureides and amides, Assay of nitrogenase activity by acetylene reduction method, Estimation of hydrogen evolution by legume nodules.

#### **Suggested Readings**

Beevers L. 1979. *Nitrogen Metabolism in Plants*. Gulab Vazirani for Arnold-Heinermann.

Bergersen FJ. (Ed.). 1980. *Methods for Evaluating Biological Nitrogen Fixation*. John Wiley & Sons.

Bray CM. 1983. Nitrogen Metabolism in Plants. Longman.

Buchanan BB, Gruissem W & James RL. (Eds.). 2000. *Biochemistry and Molecular Biology of Plants*. American Society of Plant Physiologists.

Mehta SL, Lodha ML & Sane PV. (Eds.). 1993. Recent Advances in Plant Biochemistry. ICAR.

### BIOCHEM 601 BIOCHEMISTRY OF CEREALS, OILSEEDS AND PULSES 2+0 Theory

Biochemical changes during germination, development and maturation of cereals, oilseeds and pulses, Chemical composition and nutritive values of cereals (rice, wheat, maize, sorghum and bajra), oilseeds (groundnut, cotton seed, castor, sesamum rape and mustard) and pulses crop (bengal gram, pigeonpea). Phytotoxin, aflatoxins, gossypol, naturally occurring protenase inhibitors and other plant toxins. Chemical changes and nutritional deterioration in infested cereals, oilseeds and pulses crop. Prospect of genetic upgrading of grain quality.

#### **Practical**

Proximate analysis, essential amino acids fatty acids profile, antinutritional factors, biochemical changes during seed development and germination.

### BIOCHEM 601 ADVANCED ENZYMOLOGY 2+0 Objective

To provide advanced knowledge about the structure, mechanism, kinetics and regulation of enzymes and their use as biosensors.

#### **Theory**

#### UNIT I

Theory of enzymatic catalysis, specificity, concept of active site and enzyme substrate complex, active site mapping, acid-base and covalent catalysis, factors associated with catalytic efficiency, proximity and orientation, distortion and strain, induced fit hypothesis, Mechanism of enzyme reactions.

#### UNIT II

Effect of different factors affecting enzyme activity, transition state theory, Arrhenius equation, Determination of energy of activation, kinetics of pH and temperature and determination of pKa and  $\Delta H$  of active site amino acids.

#### UNIT III

Kinetics of bisubstrate reactions, mechanism determination by radioisotope exchange, kinetics of mixed inhibitions, substrate and product inhibition. <u>UNIT</u> IV

Role of enzymes in regulation of metabolism, allosteric enzymes and their kinetics, enzyme engineering, Bifunctional enzymes, enzyme engineering,

#### **Suggested Readings**

Dixon M & Web EC. 1979. *Enzymes*. 3<sup>rd</sup> Ed. Longmans Green. Seigel IH. 1975. *Enzyme Kinetics*. John Wiley.

#### BIOCHEM 602 ADVANCED MOLECULAR BIOLOGY

**Objective** 

To impart latest information on the molecular biochemistry of isolation, transfer and expression of genes in plants and biochemical approaches employed in gene therapy.

#### **Theory**

#### UNIT I

Organization of prokaryotic genome, nuclear and organelle genes, concept of genome mapping, molecular evolution, cell development and differentiation.

#### UNIT II

Prokaryotic and eukaryotic gene regulation, RNA editing, molecular biology of viruses.

#### UNIT III

Methods of gene isolation and transfer in plants and animals, molecular basis of male sterility, Application of genetic engineering in different fields.

#### UNIT IV

Site directed mutagenesis, gene targeting and gene therapy, bioethics and biosafety guidelines and IPR in recombinant DNA research.

#### **Suggested Readings**

Alberts B, Bray D, Lewis J, Raff M, Roberts K & Watson JD. 2006. Molecular Biology of the Cell. 6<sup>th</sup> Ed. Garland Publ.

Lewin B. 2007. *Gene IX*. 9<sup>th</sup> Ed. Pearson Publ.

Selected articles from journals.

### BIOCHEM 603 BIOCHEMISTRY OF BIOTIC AND ABIOTIC STRESSES

3+0

3+0

#### **Objective**

To impart latest development about biochemistry of biotic and abiotic stresses in plants.

#### Theory

#### UNIT I

Plant-pathogen interaction and disease development; molecular mechanisms of fungal and bacterial infection in plants; changes in metabolism, cell wall composition and vascular transport in diseased plants.

Plant defence response, antimicrobial molecules; genes for resistance, hypersensitive response and cell death; systemic and acquired resistance. <u>UNIT</u>

Plant viruses, host-virus interactions, disease induction, virus movement, and host range determination; viroids, pathogen-derived resistance.

#### **UNIT IV**

Biochemical basis of abiotic stresses namely osmotic (drought, salinity), temperature, heavy metals, air and water pollutants, synthesis and functions of proline and glycine betaine in stress tolerance interaction between biotic and abiotic stresses; stress adaptation.

#### UNIT V

Reactive oxygen species and biotic and abiotic stress, antioxidants, enzymes defense system. Role of calcium, nitric oxide and salicylic acid in plant

development. Molecular strategies for imparting tolerance against biotic and abiotic stress.

#### **Suggested Readings**

Basra AS. 1997. Stress Induced Gene Expression in Plants. Harwood Academic Publ.

Chessin M, DeBorde D & Zipf A. 1995. *Antiviral Proteins in Higher Plants*. CRC Press.

Crute IR, Burdon JJ & Holub EB. (Eds.). 1997. Gene-for-Gene Relationship in Host-Parasite Interactions. CABI.

### BIOCHEM 604 CURRENT TOPICS IN BIOCHEMISTRY 1+0 Objective

To acquaint the students with the advanced developments in the field of biochemistry and to inculcate the habit of searching and reading the topics of current importance.

#### **Theory**

#### UNIT I

Advanced topics related to Nutrition and metabolism.

#### UNIT II

Advanced topics related to enzymology and industrial biochemistry.

#### UNIT III

Advanced topics related to molecular biochemistry and immunology.

#### UNIT IV

Advanced topics related to metabolic engineering and bioprospecting.

#### **Suggested Readings**

Selected articles from journals.

### BIOCHEM 605 GENOMICS, PROTEOMICS AND METABOLOMICS

#### **Objective**

To impart knowledge in the upcoming areas of biochemistry, and to acquaint the students with the recent developments of job opportunities in pharmaceutical and other industries.

#### Theory

#### UNIT I

Protein and nucleic acid sequencing: Various methods of sequencing including automated sequencing and microarrays, whole genome sequence analysis.

#### UNIT II

Comparative genomics, functional genomics, transcriptomics, gene identification, gene annotation, pairwise and multiple alignments, application of genomics, Quantitative PCR, SAGE, MPSS, microarray. <u>UNIT III</u> Proteome technology- 2D-PAGE, MSMS, MALDI-TOF, protein microarray, comparative proteomics and structural proteomics.

#### UNIT IV

Metabolic pathway engineering, vitamin A engineering in cereals, micro-array analysis, role of bioinformatics in functional genomics.

#### **Suggested Readings**

Baxevanis AD & Ouellette BFF. 2004. *Bioinformatics - A Practical Guide to the Analysis of Genes and Proteins*. 3<sup>rd</sup> Ed. Wiley InterScience.

Dale JW & Schantz MV. 2002. From Genes to Genomes. John Wiley.

Lieber DC. 2002. *Introduction to Proteomics - Tools for the New Biology*. Humana Press.

Suhai S. 2002. Genomics and Proteomics - Functional and Computational Aspects. Kluwer.

#### BIOCHEM 606 BIOMEMBRANES

2+0

Objective

To teach structure and functions of biomembranes, structure-function relationships, membrane biogenesis.

#### **Theory**

#### UNIT I

Concept of biomembranes and their classification based on cellular organelles; physico-chemical properties of different biological and artificial membranes, cell surface receptors and antigen.

#### UNIT II

Membrane biogenesis and differentiation; membrane components-lipids, their distribution and organization; proteins, intrinsic and extrinsic, their arrangement; carbohydrates in membranes and their function.

#### UNIT III

Various membrane movements; transport across membrane and energy transduction.

#### **UNIT IV**

Role of membrane in cellular metabolism, cell recognition and cell -to - cell interaction; signal transduction, recent trends and tools in membrane research.

#### **Suggested Readings**

Lodish H, Berk A, Zipursky SA, Matsudaira P, Baltimore D & Darnel J. 1999. *Molecular Cell Biology*. WH Freeman.

Nelson DL & Cox MM. 2000. *Lehninger Principles of Biochemistry*. 3<sup>rd</sup> Ed. Printed in India by Replika Press Pvt. Ltd., New Delhi for Worth Publ., New York.

Smallwood M, Knox JP & Bowls BJ. 1996. *Membranes: Specialized Functions in Plants*. Bros. Scientific Publ.

### BIOCHEM 607 ADVANCED TECHNIQUES IN BIOCHEMISTRY

0+2

#### **Objective**

To impart students a hands on training of techniques of biochemistry and molecular biology.

#### Theory

#### UNIT I

Isolation and purification of protein from microbial/plant/animal source. Electrophoretic separation of protein. Determination of molecular weight of protein using PAGE/ gel filtration method.

#### UNIT II

Experiments on DNA: Isolation, agarose gel electrophoresis and restriction

analysis of DNA.

#### UNIT III

Isolation of chloroplast and mitochondria by differential centrifugation and their purification by density gradient centrifugation.

#### UNIT IV

Isolation and purification of enzymes, isozymic analysis and enzyme immobilization

#### **Suggested Readings**

#### Suggested Broad Topics for Master's and Doctoral Research

- Immobilization of industrially important enzymes
- Manipulation of metabolic pathways for reserve biosynthesis and utilization.
- Biochemistry and molecular biology of biotic and abiotic stresses in plants.
- Biochemistry of fruits and vegetables during ripening and post ripening.
- Manipulation of metabolic pathways at molecular level to increase shelf life of fruits and to increase contents of alkaloids, flavones and isoflavones, PUFA etc.
- Use of molecular markers for identification and improvement of crop plants.
- Enzyme engineering and functional genomics/proteomics.
- Biochemical and molecular evaluation of varieties for quality improvement.
- Use of biomolecules as biosensors.
- Study of metabolome and elucidation of metabolic pathway of secondary metabolites.

\* Compulsory for M.Sc. programme; \*\* Compulsory for Ph.D. programme

(Students have to take at least 3 courses of 600 series)

The courses other than marked as \* / \*\* can be taken by the students of other departments

### MICROBIOLOGY Course Contents

#### MICRO 501 PRINCIPLES OF MICROBIOLOGY

3+1

#### **Objective**

To teach the students about basics in development of microbiology, differences in prokaryotes and eukaryotic cell and classification of prokaryotes.

#### **Theory**

#### UNIT I

Development of Microbiology in the 18<sup>th</sup> and 19<sup>th</sup> century. Morphology, structure and function of prokaryotic and eukaryotic cell. Archea. Classification of prokaryotes – Basic principles and techniques used in bacterial classification.

#### UNIT II

Evolutionary relationship among prokaryotes. Phylogenetic and numerical taxonomy. Use of DNA and r-RNA sequencing in classifications.

#### UNIT III

Study of major groups of bacteria belonging to Gracilicutes, Firmicutes, Tanericutes and Mendosicutes.

#### UNIT IV

Viruses – morphology, classification and replication of plant, animal and bacterial viruses. Cultivation methods of viruses. Immune response – specific and non-specific resistance. Normal microflora of human body; some common bacterial and viral diseases of humans and animals.

#### **Practical**

Methods of isolation, purification and maintenance of microorganisms from different environments (air, water, soil, milk and food). Enrichment culture technique — isolation of asymbiotic, symbiotic nitrogen fixing bacteria. Isolation of photosynthetic bacteria. Use of selective media, antibiotic resistance and isolation of antibiotic producing microorganisms. Morphological, physiological and biochemical characterization of bacteria.

#### **Suggested Readings**

Pelczar MJ, Chan ECS & Kreig NR. 1997. *Microbiology: Concepts and Application*. Tata McGraw Hill.

Stainier RY, Ingraham JL, Wheelis ML & Painter PR. 2003. *General Microbiology*. MacMillan.

Tauro P, Kapoor KK & Yadav KS. 1996. *Introduction to Microbiology*. Wiley Eastern.

### MICRO 502 MICROBIAL PHYSIOLOGY AND METABOLISM 3+1 (Pre-requisite Micro 401, Micro 501)

#### **Objective**

To teach students about cell cycle, growth and practical training on methods to determine microbial growth.

#### Theory

#### UNIT I

Structure, function, biosynthesis and assembly of various cellular components of prokaryotes. Archea and fungi. Transport of solutes across the membrane.

#### UNIT II

Microbial growth. Cell cycle and cell division. EMP, HMP, ED, TCA pathways, Aerobic and anaerobic respiration. Fermentative metabolism. Biosynthesis of macromolecules. Regulation of microbial metabolism.

#### UNIT III

Effect of chemicals and other environmental factors on growth. Morphogenesis and cellular differentiation.

#### UNIT IV

Important metabolic patterns in photoautotrophs, photoheterotrophs, chemoautotrophs and chemoheterotrophs.

#### **Practical**

Use of simple techniques in laboratory (Colorimetry, Centrifugation, Electrophoresis and GLC). Determination of viable and total number of cells. Measurement of cell size. Gross cellular composition of microbial cell. Growth — Factors affecting growth. Sporulation and spore germination in bacteria. Protoplasts formation. Induction and repression of enzymes.

#### **Suggested Readings**

Doelle HW. 1969. Bacterial Metabolism. Academic Press.

Gottschalk G. 1979. Bacterial Metabolism. Springer Verlag.

Moat AG. 1979. Microbial Physiology. John Wiley & Sons.

Sokatch JR. 1969. Bacterial Physiology and Metabolism. Academic Press.

#### MICRO 503 MICROBIAL GENETICS

2+1

(Pre-requisite Micro 401, Micro 501)

#### **Objective**

To acquaint the learners regarding molecular concepts of bacteria and viruses and impact of gene cloning on human welfare.

#### Theory

#### <u>UNIT I</u>

Prokaryotic, eukaryotic and viral genome. Replication of Eukaryotic, Prokaryotic and Viral DNA. Structure, classification and replication of plasmids.

#### UNIT II

Molecular basis of mutation. Biochemical genetics and gene mapping by recombination and complementation. Fine gene structure analysis. Fungal genetics.

#### UNIT III

Gene transfer in bacteria through transformation, conjugation and transduction; gene mapping by these processes. Transposable elements.

#### UNIT IV

Gene cloning and gene sequencing. Impact of gene cloning on human welfare. Regulation of gene expression. Recent advances in DNA repair and mutagenesis, Genetic basis of Cancer and cell death.

#### **Practical**

Inactivation of microorganisms by different mutagens. Production, isolation and characterization of mutants. Determination of mutation rate. Isolation, characterization and curing of plasmids. Transfer of plasmid by conjugation, electroporation. Tetrad and random spore analysis.

#### **Suggested Readings**

Birge EA. 1981. *Bacterial and Bacteriophage Genetics*. Springer Verlag. Gardner JE, Simmons MJ & Snustad DP. 1991. *Principles of Genetics*. John Wiley& Sons.

Lewin B.1999. Gene. Vols. VI-IX. John Wiley & Sons.

Scaife J, Leach D & Galizzi A 1985. *Genetics of Bacteria*. Academic Press. William Hayes 1981. *Genetics of Bacteria*. Academic Press.

#### MICRO 504 SOIL MICROBIOLOGY

2+1

#### **Objective**

Objective of this course is to teach students regarding basics of microbiology related to soil including biogeochemical cycles, plant growth promoting rhizobacteria, microbial interactions in soil and other soil activities.

#### **Theory**

#### UNIT I

Soil biota, Soil microbial ecology, types of organisms in different soils; Soil microbial biomass; Microbial interactions: unculturable soil biota.

#### UNIT II

Microbiology and biochemistry of root-soil interface; phyllosphere, Biofertilizers, soil enzyme activities and their importance.

#### UNIT III

Microbial transformations of nitrogen, phosphorus, sulphur, iron and manganese in soil. Siderophores and antimicrobials. Biochemical composition and biodegradation of soil organic matter and crop residues.

#### UNIT IV

Biodegradation of pesticides, Organic wastes and their use for production of biogas and manures: Biotic factors in soil development.

#### **Practical**

Determination of soil microbial population; Soil microbial biomass; Decomposition studies in soil, Soil enzymes; Measurement of important soil microbial processes such as ammonification, nitrification.  $N_2$  fixation, S oxidation, P solubilization and mineralization of other micro nutrients; Study of rhizosphere effect.

#### **Suggested Readings**

Paul EA. 2007. Soil Microbiology, Ecology and Biochemistry. 3<sup>rd</sup> Ed. Academic Press.

Sylvia et al. 2005. Principles and Applications of Soil Microbiology. 2<sup>nd</sup> Ed. Pearson Edu.

van Elsas JD, Trevors JT & Wellington EMH. 1997. *Modern Soil Microbiology*. Marcel Dekker.

#### **MICRO 505**

#### MICROBIAL BIOTECHNOLOGY

2+1

(Pre-requisite Micro 401, Micro 402, Micro 501)

#### **Objective**

To teach students about industrially useful microorganisms and use of fermentor for the production of various primary and secondary metabolites.

#### Theory

#### UNIT I

Introduction, scope and historical development; Isolation, screening and genetic improvement of industrially important microorganisms.

#### UNIT II

Types of fermentation systems; production of various primary and secondary metabolities, e.g. amino acids, organic acids, alcohols, enzymes, organic solvents, antibiotics, etc.

#### UNIT III

Process scale up steps: laboratory, pilot plant and industrial scales. Down stream processing; Over-production of metabolities; Bioreactor operations, process control.

#### UNIT IV

Fermented beverages; Production of single cell protein; Steroid transformation; Immobilization of cells/enzymes; Silage production; Waste water treatment.

#### UNIT V

Use of genetically-engineered microorganisms in biotechnology; Bioinsecticides, biofertilizers, etc. Microbiologically-produced food colours and flavours. Retting of flax.

#### **Practical**

Isolation of industrially important microorganisms, their maintenance and improvement. Production of industrial compounds such as alcohol, beer, citric acid, lactic acid and their recovery; Study of bio-reactors and their operation: Production of biofertilizers.

#### **Suggested Readings**

Cruger W & Cruger A. 2004. *Biotechnology - A Textbook of Industrial Microbiology*. 2<sup>nd</sup> Ed. Panima.

Ward OP. 1989. Fermentation Biotechnology. Prentice Hall.

Wiseman A. 1983. Principles of Biotechnology. Chapman & Hall.

#### MICRO 506 FOOD AND DAIRY MICROBIOLOGY

2+1

(Pre-requisite Micro 401, Micro 403, Micro 501)

#### **Objective**

To familiarize the students with recent advances in food microbiology including fermented foods, dairy, food preservation, detection of foodborne diseases, their control measures.

#### Theory

#### UNIT I

Introduction and scope; Food Microbiology – A many faceted science; Interrelationship of food microbiology with other sciences; Perspectives on food safety and Food Biotechnology.

# UNIT II

Factors of special significance in Food Microbiology – Principles influencing microbial growth in foods; Spores and their significance; Indicator organisms and Microbiological criteria; Microbial spoilage of foods- meat, milk, fruits, vegetables and their products; Food poisoning and food-borne pathogenic bacteria.

#### **UNIT III**

Food fermentation; Fermented dairy, vegetable, meat products; Preservatives and preservation methods – physical methods, chemical preservatives and natural antimicrobial compounds. Bacteriocins and their applications; Biologically based preservation systems and probiotic bacteria.

### UNIT IV

Advanced techniques in detecting food-borne pathogens and toxins. Hurdle technology and Hazard analysis. Critical control point systems in controlling microbiological hazards in foods.

#### **Practical**

Statutory, recommended and supplementary tests for microbiological analysis of various foods: Baby foods, canned foods, milk and dairy products, eggs, meat, vegetables, fruits, cereals, surfaces, containers and water.

### **Suggested Readings**

Bibek Ray.1996. Fundamentals of Food Microbiology. CRC Press.

Frazier WC & Westhoff DC. 1991. *Food Microbiology*. 3<sup>rd</sup> Ed. Tata McGraw Hill.

George J Banwart. 1989. Basic Food Microbiology. AVI.

James M Jay. 1987. Modern Food Microbiology. CBS.

Peppler HJ & Perlman D.1979. *Microbial Technology*. 2<sup>nd</sup> Ed. Academic Press.

# MICRO 507 BACTERIOPHAGES

1+1

#### **Objective**

To familiarize students about phages and phage- bacterial interactions.

#### Theory

#### <u>UNIT I</u>

Historical developments and classification of bacteriophages.

#### UNIT II

Physiology, biochemistry, enzymology and molecular biology of phage-bacterial interactions.

# UNIT III

Structure, functions and life cycles of different DNA, RNA, lytic and lysogenic phages.

### **UNIT IV**

Phages in the development of molecular biology and genetic engineering.

### **Practical**

Titration of phages and bacteria. Absorption of phages. Preparation of phage stocks. Isolation of new phages and phage resistant bacteria. One step growth curve, phage bursts. Induction of lambda. Complementation of  $T_4$  rII mutants etc.

#### **Suggested Readings**

Birge EA. 2000. Bacterial and Bacteriophage Genetics. Springer-Verlag.

Mathew CK. 1972. Bacteriophage Biochemistry. Am. Chemical Soc.

Mathew CK, Kutter EM, Mosig G & Berget P. 1988. *Bacteriophage T4*. Plenum Press.

Winkler U & Ruhr W. 1984. Bacteria, Phage and Molecular Genetics. ALA.

# MICRO 508 ENVIRONMENTAL MICROBIOLOGY

2+1

(Pre-requisite Micro 502)

# **Objective**

To teach and create awareness regarding environment, water, soil, air pollution and bioremediation.

# **Theory**

#### UNIT I

Scope of environmental microbiology. An overview of microbial niches in global environment and microbial activities. Microbiology of air, outdoor and indoor environment in relation to human, animal and plant health and economic activities.

#### UNIT II

Microbiology of natural waters. Environmental pollution – Deleterious and beneficial role of microorganisms. Environmental microbiology in public health. Microorganism in extreme environments, Environmental determinants that govern extreme environment- Air water interface, extreme of pH, Temperature, Salinity, Hydrostatic pressure.

#### UNIT III

Microbial technology in pollution abatement, waste management and resource recovery in metal, petroleum and bioenergy fields. Biofuels. Global environmental problems

#### UNIT IV

Microbial upgradation of fossil fuels and coal gas. Microbial interaction in rumen and gastrointestinal tract. Biodeterioration and Bioremediation. Biodegradation and xenobiotic compounds

### **Practical**

Analysis of natural waters, waste waters and organic waste in relation to water pollution assessment, pollution strength and resource quantification; Quality control tests, waste treatment and anaerobic digestion; Demonstration of waste water treatment processes such as activated sludge processes, biofilter and fluidized bed process.

# **Suggested Readings**

Campbell R. 1983. Microbial Ecology. Blackwell.

Hawker LE & Linton AH. 1989. *Microorganisms Function, Form and Environment*. 2<sup>nd</sup> Ed. Edward Arnold.

Mitchell R. 1992. Environmental Microbiology. John Wiley & Sons.

Richards BN. 1987. Microbes of Terrestrial Ecosystem. Longman.

#### MICRO 509

#### PLANT-MICROBE INTERACTIONS

3+0

(Open for: Microbiology, Biotechnology & Molecular Biology, Genetics, Pl. Physiology, Biochemistry, Plant Breeding & Plant Pathology students; Pre-requisite Micro503/Equiv., Micro 504)

### **Objective**

To familiarize the students with the biochemical and biophysical mechanisms, genetics, genomics, proteomics and advanced microscopy, spectroscopy of different interfaces of beneficial and pathogenic plant microbe interactions. Molecular analysis of relevant factors in the plant and microbes, and components that modulate plant-microbe interactions for soil and plant health for sustaining crop productivity.

# **Theory**

#### UNIT I

Different interfaces of interactions - Plant-microbe, microbe-microbe, soil-microbe, soil-plant-microbe interactions leading to symbiotic (rhizobial and mycorrhizal), associative, endophytic and pathogenic interactions. Types of ecosystems: Concept and dynamics of ecosystem, Food chain and energy flow, Microbial communities in the soil. Community dynamics and population interactions employing DGGE, TGGE, T-RFLP.

#### UNIT II

Quorum-sensing in bacteria, flow of signals in response to different carbon or other substrates and how signals are recognized.

#### UNIT III

Methodology/resources to study plant-microbe interaction, recombinant inbred lines, biosensors, transcriptome profiling, metabolic profiling, genomics, proteomics and advanced microscopy, spectroscopy of different interfaces.

### **UNIT IV**

Plant and microbial gene expression and signal exchange, global and specific regulators for different interactions. Molecular diversity of microbes, plants and their interactions including transgenic microbes and plants.

# **Suggested Readings**

Kosuge T & Nester EW. 1989. *Plant-Microbe Interactions: Molecular and Genetic Perspectives*. Vols I-IV. McGraw Hill.

Verma DPS & Kohn TH. 1984. Genes Involved in Microbe-Plant Interactions. Springer Verlag.

Molecular Plant-Microbe Interactions. Journal Published by APS.

#### MICRO 510 INDUSTRIAL MICROBIOLOGY

2+1

(Open for: Microbiology, Biotechnology, Biochemistry, Soil Science, Agronomy, Plant Pathology, Horticulture students; prerequisite Micro 504, Micro 506)

#### **Objective**

To expose the students to the commercial exploitation of microorganisms for production of useful products. Focus will be on understanding of the techniques involved and the application of microorganisms for agribusiness purpose.

#### **Theory**

#### UNIT I

Biofermentor; Production of wine, beer, lactic acid, acetic acid (vinegar), citric acid, antibiotics, enzymes, vitamins and single cell proteins. Biofuels: Production of ethanol, biogas and hydrogen production.

#### UNIT II

Brief introduction to bacterial, fungal and insect diseases, Types of chemicals/pesticides used for disease control. Vaccines. Bioagents and Biopesticides Biocontrol agents and their scope in control of plant diseases, nematodes and insect pests. Introduction to phytopathogens, symptoms, pathogenesis molecular aspects of plant pathogens, host-pathogens interactions, host defense mechanisms, disease forecasting and assesment of losses, prevention of epidemics, and disease control. Detailed study of the representative examples of plant diseases casuad by fungi and bacteria

#### UNIT III

Bioplastics and biopolymers: Microorganisms involved in synthesis of biodegradable plastics, other pigments, Biosensors: Development of biosensors to detect food contamination and environment pollution, Biodiversity: Structural, biochemical and molecular systematics, Numerical taxonomy. Magnitude and distribution of biodiversity.

#### **UNIT IV**

Biofertilizers, Genetic engineering of microbes for enhanced pesticide degradation Mechanisms of pesticide degradation by microbes. Biomining: Coal, mineral and gas formation, prospecting for deposits of crude, oil and gas, recovery of minerals from low-grade ores.

#### **Practical**

Production of industrial compounds such as alcohol, beer, citric acid, lactic acid and their recovery. Detection of food-borne pathogens, pesticide degradation. Demonstration of biogas production. Production of biocontrol agents.

# **Suggested Readings**

Alexander M. 1977. Soil Microbiology. John Wiley.

Hawker LE & Linton AH. 1989. *Microorganisms Function, Form and Environment*. 2<sup>nd</sup> Ed. Edward Arnold.

James M Jaq 1987. Modern Food Microbiology. CBS.

Sylvia DM, Fuhrmann JJ, Hartlly PT & Zuberer D. 2005. *Principles and Applications of Soil Microbiology*. 2<sup>nd</sup> Ed. Pearson Prentice Hall Edu.

# MICRO 511 BIOFERTILIZER TECHNOLOGY

#### **Objective**

To familiarize the students and farmers with mass scale production of different agriculturally important microorganisms which are being used as biofertilizers for maintaining the soil and plant health for sustaining crop productivity and their importance in organic farming.

1+1

#### Theory

#### UNIT I

Different agriculturally important beneficial microorganisms – free living, symbiotic (rhizobial, actinorhizal), associative and endophytic nitrogen fixers including cyanobacteria, taxonomic classification, nodule formation, competitiveness and quantification of  $N_2$  fixed.

# UNIT II

Different agriculturally important beneficial microorganisms – phosphate solubilizing bacteria and fungi, including mycorrhiza.

#### UNIT III

Different agriculturally important beneficial microorganisms – plant growth promoting rhizobacteria.

#### UNIT IV

Different agriculturally important beneficial microorganisms – Biocontrol microbial inoculants.

#### UNIT V

Different agriculturally important beneficial microorganisms for recycling of organic waste and compositing, bioremediators and other related microbes.

## UNIT VI

Different agriculturally important beneficial microorganisms - selection, establishment, competitiveness, crop productivity, soil & plant health, mass scale production and quality control of bio inoculants. Biofertilizer inoculation and microbial communities in the soil.

#### **Practical**

Isolations of symbiotic, asymbiotic, associative nitrogen fixating bacteria. Development and production of efficient microorganisms, Determination of beneficial properties in important bacteria to be used as biofertilizer, Nitrogen fixing activity, indole acetic acid (IAA), siderophore production etc, Bioinoculant production and quality control

# **Suggested Readings**

Alexander M. 1977. Soil Microbiology. John Wiley.

Bergerson FJ. 1980. *Methods for Evaluating Biological Nitrogen Fixation*. John Wiley & Sons.

Sylvia DM, Fuhrmann JJ, Hartlly PT & Zuberer D. 2005. *Principles and Applications of Soil Microbiology*. 2<sup>nd</sup> Ed. Pearson Prentice Hall Edu

van Elsas JD, Trevors JT & Wellington EMH. 1997. *Modern Soil Microbiology*. CRC Press.

# MICRO 512 CYANOBACTERIAL AND ALGAL BIOTECHNOLOGY

# 2+0

#### **Objective**

To teach students about this upcoming fascinating field of microbes develoed at a faster pace, mainly due to photoautotrophic nature of Cyanobacteria, their ability to survive under a variety of habitats and wide diversity of thallus structure and functions. Their importance for mankind is enormous including their role as biofertilizers, nutraceuticals,

experimental models, dyes, biofuels and a variety of biochemicals. regarding structure, molecular evolution and properties of cyanobacteria and algae

#### Theory

#### UNIT I

Introduction to Cyanobacteria and algae. Definition, occurrence and distribution, thallus structure, reproduction, life cycles, origin and evolution of Cyanobacteria, molecular evolution; role of algae in evolution of land plants and horizontal transfer of genes.

#### UNIT II

Algal pigments, storage products, carbon metabolism, photosynthesis. Algal culturing and cultivation. Culture types, culture conditions, culture vessels, culture media, sterilization, culture methods, synchronous cultures, photobioreactors, algal density and growth, seaweed cultivation.

#### UNIT III

Cyanobacterial and algal fuels, Fine chemicals (restriction enzymes etc) and nutraceuticals from algae; UV absorbing pigments Industrial products from macro algae - seaweed biotechnology, sustainable aquaculture. Ecology of algae- distribution in soil and water; primary colonizers, carbon sequestration and cycling in soil and water. Cellular differentiation and nitrogen fixation, nitrogen metabolism.

### UNIT IV

Algae in pollution - as pollution indicators, eutrophication agents and role in Bioremediation. Cyanobacterial and algal toxins, allelopathic interactions, Algae in global warming and environmental sustainability. Cyanobacteria and selected microalgae in agriculture – biofertilizers & algalization; soil conditioners; reclamation of problem soils.

# **Suggested Readings**

# MICRO 601 ADVANCES IN FERMENTATION 2+1 Objective

To teach students regarding fermentation industry using industrially useful microorganisms including yeast technology.

# Theory

#### UNIT I

An overview of fermentation - current status of fermentation industry. Fermentor design, high performance bioreactors, mass and energy transfer

in bioreactors. Instrumentation and control in fermentors – on line measurements systems, computer application.

#### UNIT II

Media for microbial fermentation; Criteria in media formulation. An overview of downstream processing.

#### UNIT III

New strategies for isolation of industrially important microbes and their genetic manipulations; Microbial production of health care products. Antibiotic fermentation research; steroid transformation.

#### UNIT IV

Recent developments on production of primary and secondary metabolites, Treatment of biological wastes, microbial inoculants and enzymes for waste treatment.

#### UNIT V

Yeast technology – classification, genetics, strain improvement for brewing, baking and distilleries and topics of current interest in fermentations.

#### **Practical**

Industrially important microbes and their genetic manipulations, Fermentation by improved strains of yeast for production of alcohol and beer, Microbial production of important antibiotics, enzymes and organic acids, Bioremediation of industrial effluents

# **Suggested Readings**

Peppler HJ & Perlman D. 1979. *Microbial Technology*. 2<sup>nd</sup> Ed. Academic Press.

Reed G. 1987. *Presscott & Dunn's Industrial Microbiology*. 4<sup>th</sup> Ed. CBS. Stanbury PF & Whitaker A. 1987. *Principles of Fermentation Technology*. Pergamon Press.

Wiseman A. 1983. Principles of Biotechnology. Chapman & Hall.

## MICRO 602 ADVANCED MICROBIAL PHYSIOLOGY 2+0

(Pre-requisite Micro 502)

### **Objective**

To acquaint students with current topics in molecular microbiology

# **Theory**

#### UNIT I

Origin, evolution, structure, function and molecular aspects of various cell components.

#### UNIT II

Differentiation in bacteria, slime molds, yeasts.

#### UNIT III

Molecular biology of bioluminescence, bacterial virulence. Heat shock response. Extracellular protein secretion in bacteria.

#### UNIT IV

Topics of current interest in molecular microbiology.

## **Suggested Readings**

Selected articles from journals.

#### MICRO 603 REGULATION OF MICROBIAL BIOSYNTHESIS 2+0

(Pre-requisite Micro 502, Micro 503)

# **Objective**

Course imparts thorough knowledge about the synthesis of biomolecules in microorganisms by various pathways and their regulation.

# **Theory**

#### UNIT I

Regulation of initiation, termination and anti-termination of transcription. Global regulation and differentiation by sigma factor. Regulatory controls in bacteria - inducible and biosynthetic pathways.

#### UNIT II

Ribosomal RNA and ribosomal proteins regulation under stress condition. Specific regulatory systems; SOS regulatory control; Antisense RNA regulation of gene expression.

#### <u>UNIT III</u>

Oxidative stress control. Fermentative and respiratory regulatory pathways. Regulation of cell cycle. Lytic and lysogenic cascade.

#### **UNIT IV**

Global nitrogen control and regulation of nitrogen fixation and other recent topics of regulatory systems of current interest.

# **Suggested Readings**

Selected articles from journals.

# MICRO 604 CURRENT TOPICS IN SOIL MICROBIOLOGY 2+0

(Pre-requisite Micro 504)

# **Objective**

To make students learn the latest trends in soil microbiology like diversity, biological control and bioremediation.

#### Theory

#### UNIT I

Molecular ecology and biodiversity of soil microorganisms; Survival and dispersal of microorganisms.

#### UNIT II

Microbial successions and transformation of organic matter; Role of microorganisms in soil fertility.

# UNIT III

Bioremediation of polluted soils; Biological control.

#### UNIT IV

Other topics of current interest.

#### **Suggested Readings**

Selected articles from journals.

#### MICRO 6054 SPECIAL PROBLEM

0+2

#### **Objective**

To allot short research programme to PG students based on current issues of farmers and/or industry oriented problems as per the regional research priorities.

# PLANT PHYSIOLOGY Course Contents

# PP 501 PRINCIPLES OF PLANT PHYSIOLOGY

3+1

# **Objective**

To acquaint the students with the basic concepts of plant physiology and their application in agriculture.

#### **Theory**

UNIT I

Cell organelles and their physiological functions, structure and physiological functions of cell wall, cell inclusions; cell membrane structure and functions.

UNIT II

Soil and plant water relations, water and its role in plants, properties and functions of water in the cell water relations-cell water terminology, water potential of plant cells.

**UNIT III** 

Mechanism of water uptake by roots-transport in roots, aquaporins,movement of water in plants – Mycorhizal association on water uptake.

**UNIT IV** 

Water loss from plants-Energy balance-Solar energy input-energy dissipation at crop canopy level- evapotranspiration transpiration —Driving force for transpiration, plant factors influencing transpiration rate.

UNIT V

Stomata structure and function – mechanism of stomatal movement, antitranspirants.

**UNIT VI** 

Physiology of water stress in plants: Influence of water stress at cell, organ, plant and canopy levels. Indices for assessment of drought resistance.

**UNIT VII** 

The role of mineral nutrients in plant metabolism: Essential elements, classification based on function of elements in plants.

**UNIT VIII** 

Uptake of mineral elements in plants –Mechanisms of uptake-translocation of minerals in plants.

**UNIT IX** 

Physiological and metabolic functions of mineral elements, critical levels, deficiency symptoms, nutrient deficiency and toxicity. Foliar nutrition.

UNIT X

Photorespiration and its relevance. Photosynthesis as a diffusive process and effect of environmental factors on photosynthetic rates. Photosynthesis and translocation of photosynthates and its importance in bio productivity. Photochemical process, photochemical reactions, CO2 reduction in Calvin cycle, supplementary pathway of C fixation in C4 and CAM plants and its significance. Impact of climate change on photosynthesis. Photorespiration and its relevance.

**UNIT XI** 

Mitochondrial respiration, growth and maintenance respiration, cyanide resistant respiration and its significance.

**UNIT XII** 

Growth and differentiation. Hormonal concept of growth and differentiation, plant growth hormones and their physiological role synthetic growth regulators, growth

retardants., Apical dominanace, senescence, fruit growth, development, ripening and abscission.

**UNIT XIII** 

Photo morphogenesis: Photo receptors, phytochrome, cryptochrome, physiology of flowering- Photoperiodism and Vernalisation.

**UNIT XIV** 

Classification of Plant Movements. Physiology of Plant Movements – nastic and tropic movements.

#### **Practical**

Measurement of soil water status: Theory and principle of pressure plate apparatus, neutron probe, Measurement of plant water status: Relative water content, water saturation deficits Chardakov's test. Theory and principle of pressure bomb, psychrometer and osmometer, Measurement of transpiration rate. Measurement of vapour pressure deficits, theory and principle of porometry, diffusion prometer and Steady state porometer, Stomatal physiology, influence of ABA on stomatal closing. Mineral nutrients: Demonstration of energy requirement for ion uptake. Deficiencysymptoms of nutrients, Radiant energy measurements, separation and quantification of chlorophylls, O2 evolution during photosynthesis, Measurement of gas exchange parameters, conductance, photosynthetic rate, photorespiration, Respiration rates, Bioassays for different growth hormones- Auxins, Gibberellins, Cytokinins, ABA and ethylene. Demonstration of photoperiodic response of plants in terms of flowering.

# **Suggested Readings**

Hopkins WG & Huner NPA. 2004. *Introduction to Plant Physiology*. John Wiley & Sons.

Salisbury FB & Ross C. 1992. *Plant Physiology*. 4th Ed. Wadsworth Publ.

Taiz L & Zeiger E. 2006. Plant Physiology. 4th Ed. Sinauer Associates.

# PP 502 PLANT DEVELOPMENTAL BIOLOGY - PHYSIOLOGICAL 2 +0 AND MOLECULAR BASIS

# **Objective**

To explain about basic physiological and molecular processes concerning various facets of growth and development of plants.

#### **Theory**

UNIT I

Plant Biodiversity, Concept of evolution in plants.

**UNIT II** 

General Aspects – Novel features of plant growth and development; Concept of plasticity in plant development; Analysing plant growth.

UNIT III

Seed Germination and Seedling Growth – Mobilization of food reserves during seed germination; tropisms; hormonal control of seed germination and seedling growth.

**UNIT IV** 

Shoot, Leaf and Root Development – Organization of shoot apical meristem (SAM); Control of cell division and cell to cell communication; Molecular analysis of SAM; Leaf development and differentiation; Organization of root apical meristem (RAM); Root hair and trichome development; Cell fate and lineages.

**UNIT V** 

Floral Induction and Development –Photoperiodism and its significance; Vernalization and hormonal control; Inflorescence and floral determination; Molecular genetics of floral development and floral organ differentiation; Sex determination.

**UNIT VI** 

Seed Development and Dormancy – Embryo and endosperm development; Cell lineages during late embryo development; Molecular and genetic determinants; Seed maturation and dormancy.

**UNIT VII** 

Senescence and Programmed Cell Death (PCD) – Senescence and its regulation; Hormonal and environmental control of senescence; PCD in the life cycle of plants.

**UNIT VIII** 

Light Control of Plant Development – Discovery of phytochromes and cryptochromes, their structure, biochemical properties and cellular distribution; Molecular mechanisms of light perception, signal transduction and gene regulation; Biological clocks and their genetic and molecular determinants

**UNIT IX** 

Embryonic Pattern Formation – Maternal gene effects; Zygotic gene effects; Homeotic gene effects in Drosophila; Embryogenesis and early pattern formation in plants.

UNIT X

Regeneration and totipotency; Organ differentiation and development; Cell lineages and developmental control genes in maize.

**UNIT XI** 

Special Aspects of Plant Development and Differentiation – Pollen germination and pollen tube guidance; Phloem differentiation; Sex determination in plants;

**UNIT XII** 

Self-incompatibility and its genetic control; Heterosis and apomixis.

# **Suggested Readings**

Kabita Datta 2007. Plant Physiology. Mittal Publ.

Srivastava L.M. 2002. Plant Growth and Development: Hormones and Environment. Academic Press.

Taiz L & Zeiger E. 2006. Plant Physiology. 4th Ed. Sinauer Associates.

Wilkins MB. 1969. *Physiology of Plant Growth and Development*. Tata McGraw-Hill.

# PP 503 PHYSIOLOGICAL AND MOLECULAR RESPONSES OF 2+1 PLANTS TO ABIOTIC STRESSES

#### **Objective**

To apprise the students regarding abiotic stress to plant and its molecular basis.

# **Theory**

UNIT I

Response of plants to abiotic stresses: Abiotic stresses affecting plant productivity. Basic principles of a crop improvement programme under stress, Interactions between biotic and abiotic stresses.

**UNIT II** 

Drought-characteristic features, Water potential in the soil-Plant air continuum. Development of water deficits, energy balance concept.

**UNIT III** 

Transpiration and its regulation – stomatal functions.

**UNIT IV** 

Physiological processes affected by drought. Drought resistance mechanisms: Escape Dehydration postponement (Drought avoidance), Dehydration tolerance and characteristics of resurrection plants. Osmotic adjustment, Osmoprotectants, Stress proteins. Water use efficiency as a drought resistant trait.

#### UNIT V

Molecular responses to water deficit: Stress perception, Expression of regulatory and functional genes and significance of gene products.

#### **UNIT VI**

Stress and hormones- ABA as a signaling molecule- Cytokinin as a negative signal. Oxidative stress: Reactive Oxygen Species (ROS). Role of scavenging systems (SOD catalase etc.).

#### **UNIT VII**

High temperature stress: Tolerance mechanisms- role of membrane lipids in high temperature tolerance. Functions of HSP's.

#### **UNIT VIII**

Chilling stress: Effects on physiological processes. Crucial role of membrane lipids.

### **UNIT IX**

Salinity: Species variation in salt tolerance. Salinity effects at – Cellular and whole plant level, tolerance mechanisms. Salt tolerance in – Glycophytes and halophytes. UNIT X

Heavy metal stress: Aluminium and cadmium toxicity in acid soils. Role of Phytochelatins (heavy metal binding proteins).

#### **Practical**

Measurement of water status of plants, determination of osmotic potential by vapour pressure and freezing point depression, Determination of soil water potential and content by psychrometry and other systems. Stress imposition and quantification, Stress –stomatal conductance. Canopy temperature as a reflection of transpiration and root activity, Water use – efficiency, Determination at whole plant and single leaf level, Root- shoot signals-ABA and cytokinin effect on stomatal behavior, Heat tolerance and membrane integrity. Sullivans heat tolerance test, chilling tolerance- Galactolipase and free fatty acid levels as biochemical markers for chilling damage, Cold induced inactivation of O2 evolution of chloroplasts- as a screening technique for chilling tolerance.

### **Suggested Readings**

Hopkins WG & Huner NPA. 2004. *Introduction to Plant Physiology*. John Wiley & Sons.

Salisbury FB & Ross C. 1992. *Plant Physiology*. 4th Ed. Wadsworth Publ. Taiz L & Zeiger E. 2006. *Plant Physiology*. 4th Ed. Sinauer Associates.

# PP 504 HORMONAL REGULATION OF PLANT GROWTH AND 2+1 DEVELOPMENT

#### **Objective**

To apprise the students about structure function of plant growth regulator on growth and development of plant.

#### **Theory**

# UNIT I

Definition and classifiacation of palnt growth regulators- Hormones, endogenous growth substances and synthetic chemicals, Endogenous growth regulating substances other than hormones. tricontanol, Phenols – polyamines, jasmonates, concept of death hormone.

**UNIT II** 

Site of synthesis, biosynthetic pathways and metabolism and the influence on plant growth development of individual group of hormones- Auxins, Gibberlins, cytokinins, Abscisic acid and Ethylene Brassinosteroids.

UNIT III

Hormone mutants and transgenic plants in understanding role of hormones.

**UNIT IV** 

Signal perception.transduction, and effect at functional gene level of different hormones- Auxins- cell elongation, Gibberellins -, germination of dormant seeds, cytokinins- cell division. Retardation of senescence of plant parts, Abscisic acid-Stomatal closure and induction of drought resistance, Ethylene- fruit ripening.

UNIT V

Interaction of hormones in regulation of plant growth and development processes. Rooting of cuttings-Flowering. Apical dominance, molecular aspects of control of reproductive growth and development.

**UNIT VI** 

Synthetic growth regulators- Classification, their effect on plant growth and development. Practical utility in agriculture and horticulture.

#### Practical

Quantification of Hormones- Principles of bioassays, physico chemical techniques and immunoassay, Extraction of hormones from plant tissue. Auxins- bioassays-auxins effect onrooting of cuttings, abscission, apical dominance, Gibberellins-bioassays-GA effect on germination of dormant seeds, cytokinin- bioassays-estimation using immunoassay technique cytokinin effect on apical dormance and senescence, ABA bioassaysestimation using immunoassay technique. ABA effect on somatal movement, Ethylene bioassays, estimation using physico chemical techniques- effect on breaking dormancy in sunflower and groundnut.

# **Suggested Readings**

Hopkins WG & Huner NPA. 2004. *Introduction to Plant Physiology*. John Wiley & Sons.

Salisbury FB & Ross C. 1992. *Plant Physiology*. 4th Ed. Wadsworth Publ.

Taiz L & Zeiger E. 2006. Plant Physiology. 4th Ed. Sinauer Associates.

# PP 506 PHYSIOLOGY OF GROWTH AND YIELD AND MODELING 1+1 Objective

To impart knowledge regarding crop growth analysis and different yield prediction models.

#### **Theory**

UNIT I

Crop growth analysis, key growth parameters. Analysis of factors limiting crop growth and productivity- the concept of rate limitation

UNIT II

Phenology- Growth stages, internal and external factors influencing flowering. Photoperiodic and thermo-periodic responses and the concept of Degree days and crop growth duration.

**UNIT III** 

Canopy architecture, light interception, energy use efficiency of different canopies. LAI, LAD. concept of optimum LAI.

**UNIT IV** 

Source-sink relationships. Translocation of photosynthates and factors influencing transport of sucrose. Physiological and molecular control of sink activity – partitioning efficiency and harvest index.

UNIT V

Plant growth analysis techniques, yield structure analysis, theoretical and actual yields.

**UNIT VI** 

Plant ideotypes,

**UNIT VII** 

Simple physiological yield models- Duncan's. Monteith's, and Passioura's UNIT VIII

Crop growth models-empirical models testing and yield prediction.

#### **Practical**

Plant sampling for leaf area and biomass estimation; analysis of growth and yield parameters – LAD, NAR. CGR, LAI, LAR, SLA portioning efficiency HI, Measurement of light interception, light extinction coefficient, energy utilization efficiency based energy intercepted, and realized, Computer applications in plant physiology, crop productivity and modeling.

### **Suggested Readings**

Functional-Structural Plant Modelling in Crop Production. Vol. XXII. Springer.

# PP 507 GENOME ORGANIZATION IN HIGHER PLANTS 2+1

### **Objective**

To impart basic concept on genome organization in prokaryotic and eukaryotic system.

#### **Theory**

UNIT I

Introduction: Basic discoveries in molecular genetics; basic concepts on genome organization and its replication in prokaryotic systems including cyanobacteria; genome organization in diploids, tetraploids, autoptetraploids and polyploids.

**UNIT II** 

Gene & gene expression: Diversity in DNA polymerases; control of plasmid copy number; Regulation of transcription in prokayotes; Promoters and terminators; Positive and negative control of transcription; Repression and activation-operon concept.

**UNIT III** 

Mitochondrial and chloroplastic genome organization and regulation of gene expression.

**UNIT IV** 

Eukaryotic genome structure: Organization and replication; control of gene expression-transcription and post-transcriptional; promoter analysis; concept of cis elements; transcription factors, function and role of RNA polymerases.

**UNIT V** 

Genetic code and translation-deciphering the genetic code; Codon bias; tRNAs, ribosomes; Initiation and termination of translation; Translational and post-translational controls; Attenuation; Suppressor tRNAs.

#### **UNIT IV**

Mobile genetic elements; Structure and function of transposable elements; Mechanism of transposition; Special features of retroptransposans; Repair and recombination.

#### **Practical**

Culturing and transformation of bacteria; genomic DNA and plasmid DNA isolation from bacteria, restriction enzyme digestion and analysis by agarose gel electrophoresis, isolation of genomic DNA and RNA from plants and quantification; Culture of bactriophage; studis on lytic and lysogenic phages.

#### **Suggested Readings**

Bruce Alberts, Alexander Johnson, Julian Lewis, Martin Raff, Keith Roberts & Peter Walter. *Molecular Biology of the Cell*. 3rd Ed. Garland Science.

# PP 508 MORPHOGENESIS, TISSUE CULTUREAND TRANSFORMATION2+1 Objective

To impart knowledge about cellular basic of growth and morphogenesis in plants.

#### **Theory**

UNIT I

Morphogenesis: The cellular basis of growth and morphogenesis cytodifferentiation.

UNIT II

The cell cycle-cell division and cell organization, cell structure, tissue and organ differentiation. Control of cell division and differentiation in selected cell types, Introductory history, morphogenesis and cellular totipotency.

**UNIT III** 

Introduction to in vitro methods: Terms and definitions, Use of growth regulators, Beginning of in vitro cultures in our country (ovary and ovule culture, in vitro pollination and fertilization), Embryo culture, embryo rescue after wide hybridization and its application, Endosperm culture and production of triploids.

# **UNIT IV**

Introduction to the processes of **somatic** embryogenesis, **synthetic seeds.** And organogenesis and their practical applications. **Methods of micropropagation and** clonal Multiplication of elite species (micropropagation) – axillary bud, shoot – tip and meristem culture. Haploids and their applications. Somaclonal variations and applications (treasure your exceptions).

#### UNIT V

Introduction to protoplast isolation: Principles and applications. Testing of viability of isolated protoplast. Various steps in the regeneration of protoplast. Somatic hybridization – an introduction, Various methods for fusing protoplast, chemical and electrical. Use of makers for selection of hybrid cells. Practical applications of somatic hybridization (hybrids vs cybrids)

#### **UNIT VI**

Use of plant cells, protoplast and tissue culture for genetic manipulation of plant: Introduction to *A. tumefaciens*. Tumour formation on plants using *A. tumefaciens* (Monocots vs Dicots), Root – formation using *A.rhizogenes* 

# **Practical**

*In vitro* culture of different explants such as leaf, stem, shoot apex, cotyledonary nodes; Effect of explant age on propagation potential, Effect of growth regulators auxin, cytokinins and ethlyne on callus induction, organogenesis; Somatic embryogenesis, Effect of growth conditions such as temperature and photoperiod on organogenesis, Single – cell suspension cultures.

# **Suggested Readings**

Bajaj YPS. (Ed.). 1991. *Biotechnology in Agriculture and Forestry*. Vol. XIV. Springer-Verlag.

Rajdan MK. 1993. Plant Tissue Culture. Oxford & IBH.

# PP 509 PHYSIOLOGY OF CROP PLANTS – SPECIFIC 2+0 CASE STUDIES

#### **Objective**

To impart knowledge of physiological aspects of different crop plants.

## **Theory**

UNIT I

Crop physiological aspects of rice, wheat, maize, sorghum, millets, sugarcane, pulses, oil seeds, cotton and potato Crops. Six to Eight Species could be chosen based on local importance.

**UNIT II** 

Crop specific topics.

**UNIT III** 

Seed dormancy, photoperiodic and thermoperiodic responses.

**UNIT IV** 

Source-sink relationship, Yield structure and factors influencing yield, Nutrients and other resource requirements and crop specific features.

# **Suggested Readings**

Gardner FP, Pearce RB & Mitchell RL. 1988. *Physiology of Crop Plants*. Scientific Publ.

Pessarakli M. Handbook of Plant and Crop Physiology. CRC Press.

Selected reviews and articles from Periodicals and Journals.

# PP 510 PHYSIOLOGICAL AND MOLECULAR ASPECTS 2+1 OF PHOTOSYNTHESIS-CARBON AND NITROGEN ASSIMILATION Objective

To impart knowledge about physiological and molecular aspects of carbon reduction cycle and nitrogen assimilation.

#### **Theory**

UNIT I

Photosynthesis- its significance in plant growth, development and bio productivity. Gaseous fluxes in atmosphere.

**UNIT II** 

Physiological and biochemical aspects: chloroplast structure development and replication, ultra structure of thylakoids, photo systems, mechanism of light absorption, chloroplast electron transport chain, Coupling factors and mechanisms of ATP synthesis, and concept of quantum yield.

**UNIT III** 

Photosynthetic carbon reduction cycle and its regulation. CO2 Concentration Mechanism (CCM) as a complementary strategy for carbon fixation. CCM in photosynthetic bacteria, micro algae, Submerged Aquatic macrophages (SAM), C4, CAM and single celled C4 organisms, C3-C4 intermediates. Ecological significance of CCM.

**UNIT IV** 

Rubisco structure, assembly and kinetics, photorespiration and its significance.

UNIT V

Carbon fluxes between chloroplast and cytoplasm and Carbon fixation as a diffusive process, the concept of ra, rs and rm. Pi recycling, starch and sucrose

synthesis and export. Concept of canopy photosynthesis, influence of environmental factors such as water stress, high light stress VPD etc.

#### **UNIT VI**

Molecular aspects: chloroplast genome organization, expression and regulation of plastid genes Genes regulating potential traits of photosynthesis, biotechnological approaches for improving photosynthetic rate and productivity – transgenics. Conceptual approaches of expressing C4 photosynthesis genes in C3 species.

#### **UNIT VII**

Photosynthesis and crop productivity, energy utilization efficiency by crops. Photo inhibition, photo oxidation, excitation energy dissipation mechanisms, photochemical and no-photochemical quenching of chlorophyll fluorescence. Photosynthesis and transpiration interaction, significance of WUE, carbon isotope discrimination concept.

#### **UNIT VIII**

Prospects of improving photo synthetic rate and productivity – potential traits of photosynthesis- biotechnological approaches.

#### **UNIT IX**

Nitrogen assimilation in photosynthesizing cells - NO3 -, NO2 - reduction, GS-GOGAT pathway. Photorespiration loss of Ammonia and its reassimilation and NUE.

# **Practical**

Extraction and separation of plant pigments, Isolation of chloroplasts ETC reactions- O2 evolution, Determination of rubisco content (western and ELISA), activity and activation state, Enzymatic determination of starch and sucrose, Determination of photosynthetic rates —gas exchange. A, gs, Ci, A/gs, C/gs-intrinsic WUE by gas exchange rates. Light, CO2, VPD response curves, Determination of photorespiration by gas exchange- (TPSAPS). Genotypic/species differences in photosynthetic rates. Measurement of radiation, Eu% light interception, Determination of NH4 +, reduction of inorganic nitrogen species.

# **Suggested Readings**

Hopkins WG & Huner NPA.2004. *Introduction to Plant Physiology*. John Wiley & Sons.

Salisbury FB & Ross C.1992. Plant Physiology. 4th Ed. Wadsworth Publ.

Taiz L & Zeiger E. 2006. Plant Physiology. 4th Ed. Sinauer Associates.

#### PP 511 MINERAL NUTRITION 2+1

#### **Objective**

To impart knowledge about physiological and molecular aspects of carbon reduction cycle and nitrogen assimilation

# **Theory**

UNIT I

Overview of essential mineral elements, kinetics of nutrient uptake by plants. Biological actions influencing nutrient availability near the root system.

**UNIT II** 

Nutrient uptake by root cells, long distance transport in plants and movement into developing grains. Nutrient transport from vegetative to reproductive organs during reproductive stage of growth and maturity.

**UNIT III** 

Molecular mechanism of ion uptake, ion transporters, specific examples of transporters for Nitrate, Phosphate, Potassium and other nutrients. Multiple transporters for a single ion and their functional regulation.

#### **UNIT IV**

Molecular physiology of micronutrient acquisition. Examples of genes encoding mineral ion transporters. Strategies plants adopt to acquire and transport minerals under deficient levels.

#### UNIT V

Physiological and molecular mechanisms underlying differential nutrient efficiency in crop genotypes, Examples of Phosphorous, Iron and Zinc efficient crop varieties.

UNIT VI

Physiological screening methods of crop varieties for improved nutrient efficiency. Plant responses to mineral toxicity.

#### **Practical**

Physiological and biochemical changes in plants under nutrient sufficiency and deficiency levels. Quantification of pigment levels, enzyme activities.

## **Suggested Readings**

Barker AB & Pilbeam DJ. 2007. Handbook of Plant Nutrition. CRC

Epstein E. 2007. Mineral Nutrition of Plants. John Wiley & Sons.

Marschner H. 1995. Mineral Nutrition of Higher Plants. Academic Press.

# PP 512 PLANT CELL METABOLISM

### **Objective**

To apprise the students regarding various metabolic events at cellular level and its impact on crop physiology.

UNIT I

Compartmentation of cellular metabolism in the cell and role of various cell organelles-plastids, mitochondria, ribosomes, endoplasmic reticulum, nucleus etc. in cell metabolism.

UNIT II

Carbohydrate metabolism: Synthesis of sucrose, oligo, starch and polysaccharides.

UNIT III

Nitrogen metabolism: Inorganic nitrogen species (N2, NO3 and NH3) and their reduction to aminoacids, protein synthesis and nucleic acids.

**UNIT IV** 

Lipid metabolism- Storage, protective and structural lipids. Biosynthesis of fattyacids, diacyl and triacyl glycerol, fatty acids of storage lipids. Secondary metabolites and their significance in plant defence mechanism.

**Practical** 

Estimation of reducing sugars and starch. Estimation of NO3, free aminoacids in the xylem exudates, quantification of soluble proteins and sugars. Estimation of key enzymes of different metabolic pathways under study.

# **Suggested Readings:**

Hopkins WG & Huner NPA. 2004. *Introduction to Plant Physiology*. John Wiley & Sons.

Salisbury FB & Ross C. 1992. Plant Physiology. 4th Ed. Wadsworth Publ.

Taiz L & Zeiger E. 2006. Plant Physiology. 4th Ed. Sinauer Associates.

Atkinson, D. E. (1977). Cellular energy metabolism and its regulation. Academic Press, New York.

2 + 1

# PP 513 Physiological responses of plants to Biotic Stresses 1+1

## **Objective**

To apprise the students regarding biotic stress to plant and its physiological basis.

UNIT I

Response of plants to biotic stresses and their effect on plant productivity. Interaction between biotic and abiotic stresses.

UNIT II

Plant-pathogen interaction and disease development; molecular mechanisms of fungal and bacterial infection an plants; changes in metabolism, cell wall composition and vascular transport on diseased plants.

UNIT III

Plant defense response, morphological, structural, biochemical and physiological resistance mechanisms, antimicrobial molecules; genes for resistance, hypersensitive response and cell death; systemic and acquired resistance, phytoalexins, altered respiration in defense mechanisms.

**UNIT IV** 

Plant viruses, host-virus interactions, disease induction, virus movement, and host range determination; viriods, pathogen-derived resistance.

UNIT V

Mechanism of resistance against insect-pests.

#### **Practicals:**

Morphological and Physiological symptoms related to bacterial, fungal and viral diseases. Total phenol from diseased and healthy plants. Polyphenol oxidase assay and isozymes plant species differing in tolerance. Peroxidase assay and isozymes plant species differing in tolerance. Chitinase assay from tolerant and susceptible plant genotypes. Assay and SDS PAGE of native and PR proteins.

# **Suggested Readings:**

# PP 601 FUNCTIONAL GENOMICS AND GENES 2+0 ASSOCIATED WITH A FEW PHYSIOLOGICAL PROCESSES Objective

To impart knowledge about physiological process of plant at molecular level.

#### Theory

UNIT I

Gene discovery: Finding Genes in Complex Plant System, Constructing Gene-Enriched Plant Genomic Libraries, In Silico Prediction of plant Gene Function, Quantitative Trait Locus Analysis as a Gene Discovery Tool.

#### **UNIT II**

Genetic tools for plant development- Understanding the importance of mutants in unraveling the physiological processes – T-DNA insertion mutants, Gain in function, Transposon mutagens, Transposition, Physical and Chemical mutagenesis, Gene and Enhancer Traps for Gene Discovery, High-Throughput TAIL-PCR as a Tool to identify DNA Flanking insertions, High-Throughput TILLING for functional Genomics.

#### **UNIT III**

Gene knock out approaches: Antisense technology, Virus induced gene silencing (VIGS), Custom Knock-outs with Haripin RNA-mediated Gene Silencing and other silencing tools, Complementation studies, DNA micro arrays.

#### **UNIT IV**

Gene Over expression approaches: Vector Construction for Gene Overexpression as a Tool to Elucidate Gene Function; Transient expression, Transgenics.

#### **UNIT VI**

Proteomics: Networking of Biotechnology for interpreting gene functions. Yeast two hybrid systems to study protein –protein interaction to study gene functions, Proteomics as a Functional Genomics Tool, Crystallographic and NMR approaches to determine protein structures.

#### **UNIT VII**

Functional characterization of genes associated with important cellular processes influencing crop growth and development.

#### **UNIT VIII**

Case studies of genes controlling photosynthesis, respiration, photorespiration, fatty acid biosynthesis, nutrient uptake, flowering, seed protein quality and quantity.

# **Suggested Readings**

Selected articles from various journals

# PP 602 SIGNAL PERCEPTIONS AND TRANSDUCTION 2+0 AND REGULATION OF PHYSIOLOGICAL PROCESSES Objective

To impart the knowledge about signal ling of hormones and regulation of physiological processes.

# Theory

#### UNIT I

General aspects: Introduction to signaling-Long range (Diffusible) signaling and short range (contact) signaling. Components of signaling- Upstream components: receptor and ligands concept-types of ligands and its relevance-receptor kinases-Two component sensing system. Down stream components: G. proteins-second messengers-Cyclic AMP, adenylate cyclase cascade, cyclic GMP, calcium-calmodulin-Kinases-Effector molecules (transcription factor).

#### **UNIT II**

Hormone signaling: Hormone binding receptors-Transduction process.Effector molecules and gene expression.

#### **UNIT III**

Specific signaling pathways of Auxins, Cytokinisn, Gibberllins, Ethylene, ABA, Brassinosteroids which leads to formative effects. The cross talk in the signaling of different hormones-significance of studies with hormone action mutants.

#### **UNIT IV**

Light signaling: Perception of light-pigments involved-activation of phytochrome/cryptochrome (study of mutants). Light signal transduction-Multiple signaling cascades-identification of signaling components through mutant analysis-changes in gene expression.

#### **UNIT V**

Abiotic stress signaling: Sensing of environmental factors (Temperature-Osmoticum-Ionic stress) Activation of specific molecules and secondary messengers-Activation of Down stream components-leading to stress gene expression. Case studies with different abiotic stresses.

#### **UNIT VI**

Cross talk between signaling pathways.

#### UNIT VII

Signal perception and transduction in plant defense responses: Role of salicylic acid and active oxygen species.

#### **UNIT VIII**

Signaling cascade during leaf senescence, abscission, flowering and tuberisation UNIT IX

Transcription factor as signaling regulatory tools for improving growth processes—Case studies: Tbi- lateral branch development, Shi 4- grain shattering, GA1–Dwarfing.MADS, KNOX- flowering development, HAT 4- Shade development, AP2-EREBP- biotic/abiotic stresses.

#### **Suggested Readings**

Selected articles from various journals.

# PP 603 MOLECULAR APPROACHES FOR IMPROVING PHYSIOLOGICAL TRAITS

# **Objective**

To impart knowledge to improve the physiological traits using molecular approaches.

# **Theory**

## UNIT I

Importance of Molecular Breeding for complex multi-gene controlled physiological traits and its relevance in augmenting trait based breeding. Physiological traits with relevance to growth, development, abiotic stress tolerance, nutrient acquisition, Approaches for accurate phenotyping of large germplasm accessions and/or mapping populations.

#### UNIT II

The advantages of "Trait based" breeding approaches. Concept of segregation, independent assortment and linkage. The concept of molecular markers, various types of Dominant and Co-dominant marker systems.

#### **UNIT III**

Relevance and development of mapping populations and genetic analysis using marker systems. Advantages of association mapping and the concept of linkage, LD decay and population structure.

#### **UNIT IV**

Statistical analysis to assess the variance in phenotypic traits and molecular data. Assessment of genetic parameters such as heritability, genetic advance etc.

#### **UNIT V**

Strategies for QTL introgression and Marker Assisted Selection (MAS). Map based cloning of novel genes and alleles. Allele mining

#### **UNIT VI**

2+1

Transgenic approach in improving physiological processes- Introduction to GMOs and application in crop improvement; gene mining, sequence structure & function analysis using bioinformatics tools, identification of candidate genes for various physiological process associated with specific traits (such as stress tolerance) and their potential benefits in transgenic

crops.

**UNIT VII** 

Cloning full-length candidate genes, stress inducible promoters, strategies to clone and characterize and make constructs for specific crops, gene stacking strategies, tissue specific expression and functional validation of genes.

**UNIT VIII** 

Transformation of crop plants-*Agrobacterium* and use of other organisms for transformation-particle gun transformation and other methods.

**UNIT IX** 

Selection of transformants- molecular analysis on the basis of qRT-PCR, Southern, Northern analysis and immunoassays; estimation of copy number. Concept of desirable number of independent events.

**UNIT X** 

Evaluation of transgenics on basis of empirical/physiological/biochemical process under specific conditions on the basis of gene function. Generation of T1 populations, event characterization and generation of molecular data as per the regulatory requirements.

**UNIT XI** 

Issues related to Biosafety and Registration of Transgenic Agricultural Organisms, methods to detect GMOs from agricultural products.

#### **Practical**

Phenotyping approaches for the different physiological traits. Genotyping options using gene-scan systems. Development of SSR, SNP and SCAR markers, resolution of polymorphism on agarose gels and PAGE, genotyping using a DNA sequencing machine, scoring of gels and assessment of polymorphism, Statistical approaches to assess genetic variability, heritability and other parameters, Phylogenic analysis, Principal component analysis and construction of dendrograms. Construction of Linkage map, QTL maps, population structure, LD decay etc leading to identification of QTLs, Bioinformatics – sequence analysis, structure analysis, Molecular biology - genomic/plasmid DNA isolation, RNA isolation. Full-length gene cloning, vector construction with specific promoter, gene stacking & transient assays. Transformation in model system,Crop transformation - *Agrobacterium* mediated transformation (inplanta & invitro), particle-gun transformation, Evaluation of transgenics –semiquantitative & quantitative RT-PCR, southern blot, northern blot, western blot and ELISA, biochemical/physiological assay based on the function of gene & testing LOD.

# **Suggested Readings**

Selected articles from various journals.

## PP 604 TECHNIQUES IN PLANT PHYSIOLOGY 1+2

#### **Objective**

To impart recent practical training to study various physiological processes in plants.

#### **Theory**

UNIT I

Recent experimental techniques to study various physiological processes, Photosynthetic gas exchange measurements, light and CO2 response curvesdetermination of relative limitations to photosynthesis; chlorophyll fluorescence measurements. Measurement of respiration and photorespiration.

**UNIT II** 

Estimation of water use efficiency at whole plant and single leaf level. Use of stable isotopes to understand physiological processes.

UNIT III

Radio isotopes in plant biology.

**UNIT IV** 

Tools and techniques (molecular and biochemical) to study physiological processes and to screen & assess stress responses in plants, such as (a) DNA & RNA isolation, cDNA synthesis & library construction, semiquantitative & quantitative RT-PCR, northern blot, immunoassays; (b) techniques for defined physiological processes.

UNIT V

Methods to phenotype germplasm for specific physiological traits.

**UNIT VI** 

Quantification of mineral nutrients using advanced instruments like AAS, & ICP.

**UNIT VII** 

Techniques in plant transformation & analysis of transgenic plants

**UNIT VIII** 

Molecular markers- genetic distance and mapping population concept of linkage maps and identification of QTLS.

**UNIT IX** 

Instrumentation: Acquaintance of the operation of specific instruments important in physiological research like Mass spec., phosphor-imager, DNA sequencer, spectro-fluorometer, oxygen electrode, etc.

#### **Practical**

Photosynthetic gas exchange measurements, light and CO2 response curves-determination of relative limitations to photosynthesis; chlorophyll fluorescence measurements. Estimation of water use efficiency at whole plant and single leaf level. Use of stable and radioactive isotopes to understand physiological processes. DNA & RNA isolation, cDNA synthesis & library construction, semiquantitative & quantitative RT-PCR, northern blot, immunoassays; techniques for defined physiological processes, Quantification of mineral nutrients using advanced instruments like AAS.

#### **Suggested Readings**

Dhopte MA & Manuael Livera M. 1986. *Useful Techniques for Plant Scientists*. Forum for Plant Physiologists, R. D. G., Aloka.

#### PP 605 CLIMATE CHANGE AND CROP GROWTH 2+0

# **Objective**

To impart knowledge about climate change and its implication to crop growth.

#### **Theory**

UNIT I

History and evidences of climate change and its implications. Effect of climate change on monsoons, hydrological cycle and water availability.

**UNIT II** 

Natural and anthropogenic activities and agricultural practices on GHG production, Monitoring of greenhouse gases and their influence on global warming and climate change, Ozone depletion leading to increased ionizing radiations and its implications on crop growth.

**UNIT III** 

Long-term and short-term projections of climate change effects on natural vegetations and ecosystems, crop-pest interaction, area shift, food production and supply.

**UNIT IV** 

Approaches to mitigate climate change through studies on plant responses.

UNIT V

Direct and indirect effects of climate change on plant processes –phenology, net carbon assimilation, water relations, grain development and quality, nutrient acquisition and yield.

**UNIT VI** 

Conventional and biotechnological approaches to improve the crop adaptation to climate change. Relevance of "Genome wide mutants" to identify genes/processes for improved adaptation to changing environments

**UNIT VII** 

Introduction to carbon sequestration. International conventions and global initiatives on Carbon sequestration, carbon trading.

#### **Suggested Readings**

Abrol YP & Gadgil S. (Eds.). 1999. Rice in a Changing Climate.

Reddy KR & Hodges HF. 2000. Climate Change and Global Crop Productivity. CABI.

Watson RT, Zinyowera MC & Moss RH. 1998. *The Regional Impacts of Climate Change - an Assessment of Vulnerability*. Cambridge Univ. Press.

#### PP 606 POST HARVEST PHYSIOLOGY 2+0

# **Objective**

To impart knowledge about physiological changes during senescence and ripening. **Theory** 

UNIT I

Environmental factors influencing senescence, ripening and post harvest life of flowers, vegetables and seeds.

UNIT II

Molecular mechanism of senescence and ageing. Physiological, biochemical and molecular aspects of senescence and fruit ripening.

UNIT III

Senescence associated genes and gene products.

**UNIT IV** 

Functional and ultrastructural changes in chloroplast membranes, mitochondria and cell wall during senescence and ripening.

**UNIT V** 

Regulatory role of ethylene in senescence and ripening, ethylene biosynthesis, perception and molecular mechanism of action.

**UNIT VI** 

Post harvest changes in seed and tubers biochemical constituent's quality parameters. Effect of environmental factors on post harvest changes in seed and tubers.

**UNIT VII** 

Biotechnological approaches to manipulate ethylene biosynthesis and action.

**UNIT VIII** 

Alternate post harvest methodology and quality attributes. Scope for genetic modification of post harvest life of flowers and fruits.

**UNIT IX** 

Uses of GM crops and ecological risk assessment.

#### UNIT X

Concepts of physiological maturity of seeds, post harvest changes in biochemical constituents in field crops, loss of nutritive value, environmental factors influencing post harvest deterioration of seeds and fruits.

#### **Practical**

Physiological and biochemical changes during senescence and ripening, Estimation of ethylene during senescence and ripening, determination of Reactive Oxygen Species and scavenging enzymes, Measurement of dark and alternate respiration rates during senescence and ripening. Estimation of ripening related enzyme activity, Cellulases pectin methyl esterases, polygalacturonase etc.

# **Suggested Readings**

Jeffrey K Brecht & Weichmann J. 2003. Post Harvest Physiology and Pathology of Vegetables. CRC Press.

# PP 607 WEED PHYSIOLOGY AND HERBICIDE ACTION 1+1 Objective

To apprise students regarding weed and crop competition, and physiological and molecular aspects of herbicides.

# **Theory**

UNIT I

Weed biology, ecology and physiology. Weed and crop competition, allelochemicals, their nature and impact. Weed-seed physiology.

UNIT II

Classification of herbicides and selectivity. Recent concepts on entry, uptake, translocation and metabolism of soil and foliar applied herbicides. Environmental and plant factors influencing entry, uptake and translocation of herbicides.

**UNIT III** 

Classification and chemistry of common herbicides. Physiological, biochemical and molecular mechanism of action of different groups of herbicides; ACC synthase inhibitors, ALS inhibitors, Mitotic inhibitors, Cellulose biosynthesis inhibitors, Inhibitors of fatty acid biosynthesis, inhibitors of Photosynthesis, Auxinic Herbicides, New herbicides,

**UNIT IV** 

Metabolic pathway of herbicide degradation in plants and soil. Herbicide adjuvants and their classification.

**UNIT V** 

Molecular mechanism of action of herbicide synergists and antagonists.

**UNIT VI** 

Physiological and molecular mechanism of herbicide selectivity.

**UNIT VII** 

Herbicide resistant crops; transgenic & tissue culture approaches to develop herbicide tolerant varieties

#### **Practical**

Adjuvants and their effect on spray droplets, chemical entry and transport. Determination of physiological and biochemical processes like photosynthesis, respiration, cell division, Protein & fatty acid synthesis, membrane permeability as affected by herbicides. Quantification of pigment levels in leaves, specific enzyme activities affected by herbicides. Demonstration of translocating type of herbicides by radio labeling studies.

### **Suggested Readings**

Devine MD, Duke SO & Fedtake C. 1993. *Physiology of Herbicide Action*. Prentice Hall.

Monaco TJ, Weller SC & Ashton FM. 2002. Weed Science - Principles and Practices. Wiley.com Publ.

# PP 608 SEED PHYSIOLOGY 2+1

# **Objective**

To apprise students regarding seed germination, dormancy and physiological processes involved in regulation of seed development

# Theory

UNIT I

Seed and fruit development, seed and fruit abortion, proximate mechanism of seed and fruit abortion. Hereditary and environmental effect on seed development. Gene imprints and seed development.

UNIT II

Importance of seeds, seed structure and function, physiological and biochemical changes, environmental influences, physiology of seed and fruit development; seed and fruit abortion and means to overcome it; proximate mechanisms of seed and fruit abortion.

**UNIT III** 

Structure of seeds and their storage resources, seed developmental patterns and source of assimilates for seed development.

**UNIT IV** 

Pathway of movement of assimilates in developing grains of monocots and dicots, Chemical composition of seeds, Storage of carbohydrates, proteins and fats in seeds and their biosynthesis.

**UNIT V** 

Seed respiration, mitochondrial activity, Seed ageing, Mobilization of stored resource in seeds, Chemistry of oxidation of starch, proteins and fats, Utilization of breakdown products by embryonic axis.

UNIT VI

Control processes in mobilization of stored resources, Role of embryonic axes, Gibberllin and a-amylase and other hydrolytic activity. Seed maturation phase and desiccation damage, Role of LEA proteins.

**UNIT VII** 

Seed viability, Physiology of and means to prolong seed viability, Seed vigour: concept, importance, measurement; invigoration: methods and physiological basis of it, Seed dormancy, types and regulation, Means to overcome seed dormancy.

#### **Practical**

Determination of seed storage proteins, Sink drawing ability of ovules, empty ovule technique, Alpha-amylase activity in germinating seeds, Role of GA in inducing amylase activity, Role of embryo in GA induced aamylase activity, Protease and lipase activity in germinating seeds, Seed viability test and accelerated ageing test. Seed hardening/osmotic priming of seeds, Seed respiration rates, Seed viability losses through membrane leakage studies.

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

# **Biotechnology & Bioinformatics**

Plant Molecular Biology & Biotechnology

Gujarat Agricultural Universities (Anand, Sardarkrushinagar, Navsari, Junagadh) May 2010

### **EXECUTIVE SUMMARY**

#### Plant Molecular Biology & Biotechnology

- In the last thirty years, a revolution has taken place that has put molecular biology and biotechnology at the heart of all the biological sciences with extensive applications in agriculture, health, industry and environment. Keeping these developments in view, the new course curriculum for PG program in 'Plant Molecular Biology and Biotechnology' has been developed
- The curriculum now includes courses on 'Plant Tissue Culture and Genetic Transformation', 'Molecular Breeding', 'Genomics and Proteomics', 'Bioinformatics', 'Nano-biotechnology', 'Biosafety, IPR and Bioethics', 'Biostatistics and Computers', 'Environmental Biotechnology', 'Immunology and Molecular Diagnostics', which have direct application in improving agriculture and industry.
- The curriculum also includes seven advanced courses (for Ph.D.) on Molecular Biology, 'Genetic Engineering', 'Microbial Biotechnology', 'Crop Biotechnology', 'Functional Genomics and Proteomics", "Commercial Plant Tissue Culture" and "Animal Biotechnology', which are meant to provide the latest developments in the respective fields of Biotechnology.
- The curriculum also includes two practical courses namely 'Techniques in Molecular Biology I and II' that includes exhaustive hands-on training on various techniques of molecular biology and genomics.
- Highly specialized faculty in different areas of Molecular Biology and Biotechnology, well-equipped laboratories and other resources shall be required for teaching of the courses and conducting practicals given in the new course curriculum. While teaching and research skills of the already employed faculty needs to be improved, new young faculty from advanced Institutes/Universities in India or abroad may be appointed. Exchange of faculty among the various Universities could also be a viable option.
- The new course curriculum shall provide ample opportunity to the students to specialize in several different areas of Biotechnology including 'Plant Tissue Culture', 'Genomics', 'Microbial Biotechnology', 'Animal Biotechnology', 'Molecular Breeding' and 'Genetic Transformation'.
- The proposed curriculum is now tuned with fast evolving area of 'Molecular Biology' and likely to generate qualified human resource at par with those from other elite National and International institutions.
- Training of the faculty is required to teach new courses.
- Approximately, Rs. 10 crores are required for building laboratories, equipment, furniture, etc. for effective implementation of both Ph. D. and M. Sc. Programmes.

# PLANT MOLECULAR BIOLOGY AND BIOTECHNOLOGY

# Course Structure – at a Glance

CODE	COURSE TITLE	CREDITS
MBB 501**	PRINCIPLES OF BIOTECHNOLOGY	2+1
MBB 502**	FUNDAMENTALS OF MOLECULAR BIOLOGY	3+0
MBB 503**	MOLECULAR CELL BIOLOGY	3+0
MBB 504	PLANT TISSUE CULTURE & GENETIC	1+2
	TRANSFORMATION	
MBB 505**	TECHNIQUES IN MOLECULAR BIOLOGY I	0+3
MBB 506	MICROBIAL/ INDUSTRIAL BIOTECHNOLOGY	2+1
MBB 507	MOLECULAR BREEDING	2+0
MBB 508	GENOMICS & PROTEOMICS	2+0
MBB 509	TECHNIQUES IN MOLECULAR BIOLOGY II	0+3
MBB 510*	BIOSAFETY, IPR AND BIOETHICS	2+0
MBB 511*	ANIMAL BIOTECHNOLOGY	3+0
MBB 512*	IMMUNOLOGY AND MOLECULAR DIAGNOSTICS	2+1
MBB 513*	NANO-BIOTECHNOLOGY	3+0
MBB 551*^	PRINCIPLES OF GENETICS	2+1

<sup>#</sup> cross listed with Biochemistry 501

<sup>\$</sup> cross listed with MICRO 501

# PLANT MOLECULAR BIOLOGY AND BIOTECHNOLOGY **Course Contents**

#### **MBB 501** PRINCIPLES OF BIOTECHNOLOGY 2+1

# **Objective**

To familiarize the students with the fundamental principles of Biotechnology, various developments in Biotechnology and its potential applications.

### Theory

#### UNIT I

History, scope and importance; DNA structure, function and metabolism.

#### UNIT II

DNA modifying enzymes and vectors; Methods of recombinant DNA technology; Nucleic acid hybridization; Gene libraries; PCR amplification; Plant and animal cell and tissue culture techniques and their applications.

#### UNIT III

Molecular markers and their applications; DNA sequencing; Applications of gene cloning in basic and applied research; Genetic engineering and transgenics; Genomics, transcriptomics and proteomics.

#### UNIT IV

General application of biotechnology in Agriculture, Medicine, Animal husbandry, Environmental remediation, Energy production and Forensics; Public perception of biotechnology; Bio-safety and bioethics issues; Intellectual property rights in biotechnology.

### **Practical**

- i. Isolation of genomic and plasmid DNA
- ii. Gel electrophoresis techniques
- iii. Restriction enzyme digestion, ligation, transformation and screening of transformants
- iv. PCR and molecular marker analysis
- Plant tissue culture: media preparation, cell and explant culture, regeneration and transformation.

# Suggested Readings

Becker JM, Coldwell GA & Zachgo EA. 2007. Biotechnology - a Laboratory Course. Academic Press.

Brown CM, Campbell I & Priest FG. 2005. Introduction to Biotechnology. Panima Pub.

Brown TA. Gene Cloning and DNA Analysis. 5th Ed. Blackwell Publishing. Dale JW & von Schantz M. 2002. From Genes to Genomes: Concepts and Applications of DNA Technology. John Wiley & Sons.

Gupta PK. 2004. Biotechnology and Genomics. Rastogi Publications. Sambrook J, Fritsch T & Maniatis T. 2001. Molecular Cloning - a Laboratory Manual. 2<sup>nd</sup> Ed. Cold Spring Harbour Laboratory Press.

Singh BD. 2007. Biotechnology Expanding Horiozon. Kalyani Publishers.

#### **MBB 502** FUNDAMENTALS OF MOLECULAR BIOLOGY 3+0 **Objective**

To familiarize the students with the basic cellular processes at molecular level.

#### Theory

#### UNIT I

Historical developments of molecular biology; Nucleic acids as genetic material; Chemistry, structure and properties of DNA and RNA.

#### UNIT II

Genome organization in prokaryotes and eukaryotes; Chromatin structure and function; DNA replication; DNA polymerases, topoisomerases, DNA ligase, etc; Molecular basis of mutations; DNA repair mechanisms.

#### **UNIT III**

Transcription process; RNA processing; Reverse transcriptase; RNA editing; Ribosomes structure and function; Organization of ribosomal proteins and RNA genes; Genetic code; Aminoacyl tRNA synthases.

#### UNIT IV

Translation and post-translational modifications; Operon concept; Attenuation of *trp* operon; important features of gene regulation in eukaryotes.

#### **Suggested Readings**

Lewin B. 2008. Gene IX. Peterson Publications/ Panima.

Malacinski GM & Freifelder D. 1998. *Essentials of Molecular Biology*. 3<sup>rd</sup> Ed. Jones & Bartlett Publishers.

Nelson DL & Cox MM. 2007. Lehninger's Principles of Biochemistry. W.H. Freeman & Co.

Primrose SB. 2001. Molecular Biotechnology. Panima.

Watson JD, Bakee TA, Bell SP, Gann A, Levine M & Losick R. 2008. *Molecular Biology of the Gene*. 6<sup>th</sup> Ed. Pearson Education International.

#### MBB 503 MOLECULAR CELL BIOLOGY

3+0

## **Objective**

To familiarize the students with the cell biology at molecular level.

#### Theory

#### UNIT I

General structure and constituents of cell; Similarities and distinction between plant and animal cells; Cell wall, cell membrane, structure and composition of biomembranes, cell surface related functions.

#### <u>UNIT II</u>

Structure and function of major organelles: Nucleus, Chloroplasts, Mitochondria, Ribosomes, Lysosomes, Peroxisomes, Endoplasmic reticulum, Microbodies, Golgi apparatus, Vacuoles, etc.

#### **UNIT III**

Organellar genomes and their manipulation; Ribosomes in relation to cell growth and division; Cyto-skeletal elements.

#### **UNIT IV**

Cell division and regulation of cell cycle; Membrane transport; Transport of water, ion and biomolecules; Signal transduction mechanisms; Protein targeting.

## **Suggested Readings**

Gupta PK. 2003. Cell and Molecular Biology. 2<sup>nd</sup> Ed. Rastogi Publ.

Lodish H. 2003. *Molecular Cell Biology*. 5<sup>th</sup> Ed. W.H. Freeman & Co.

Primrose SB. 2001. Molecular Biotechnology. Panima.

## PLANT TISSUE CULTURE AND GENETIC TRANSFORMATION

#### **Objective**

To familiarize the students and provide hands on training on various techniques of plant tissue culture, genetic engineering and transformation.

#### **Theory**

#### UNIT I

History of plant cell and tissue culture; Culture media; Various types of culture; callus, suspension, nurse, root, meristem, etc.; *In vitro* differentiation: organogenesis and somatic embryogenesis; Plant growth regulators: mode of action, effects on *in vitro* culture and regeneration; Molecular basis of plant organ differentiation.

## UNIT II

Micropropagation; Anther and microspore culture; Somaclonal variation; *In vitro* mutagenesis; *In vitro* fertilization; *In vitro* germplasm conservation; Production of secondary metabolites; Synthetic seeds.

#### UNIT III

Embryo rescue and wide hybridization; Protoplast culture and regeneration; Somatic hybridization: protoplast fusion, cybrids, asymmetric hybrids, etc.

#### UNIT IV

Methods of plant transformation; Vectors for plant transformation; Genetic and molecular analyses of transgenics; Target traits and transgenic crops; Biosafety issues, testing of transgenics, regulatory procedures for commercial approval.

#### **Practical**

- i. Laboratory set-up.
- ii. Preparation of nutrient media; handling and sterilization of plant material; inoculation, subculturing and plant regeneration.
- iii. Anther and pollen culture.
- iv. Embryo rescue.
- v. Suspension cultures and production of secondary metabolites.
- vi. Protoplast isolation, culture and fusion.
- vii. Gene cloning and vector construction
- viii. Gene transfer using different methods, reporter gene expression, selection of transformed tissues/plants, molecular analysis.

Singh BD. 2007. Biotechnology: Expanding Horiozon. Kalyani.

#### **MBB 505**

#### TECHNIQUES IN MOLECULAR BIOLOGY-I

**Objective** 

To provide hands on training on basic molecular biology techniques.

#### **Practical**

#### UNIT I

Good lab practices; Biochemical techniques: Preparation of buffers and reagents, Principle of centrifugation, Chromatographic techniques (TLC, Gel Filtration Chromatography, Ion exchange Chromatography, Affinity Chromatography).

0+3

#### UNIT II

Gel electrophoresis- agarose and PAGE (nucleic acids and proteins); Growth of bacterial culture and preparation of growth curve; Isolation of plasmid DNA from bacteria; Growth of lambda phage and isolation of phage DNA; Restriction digestion of plasmid and phage DNA; Isolation of high molecular weight DNA and analysis.

#### UNIT III

Gene cloning – Recombinant DNA construction, transformation and selection of transformants; PCR and optimization of factors affecting PCR.

#### UNIT IV

Dot blot analysis; Southern hybridization; Northern hybridization; Western blotting and ELISA; Radiation safety and non-radio isotopic procedure.

#### **Suggested Readings**

Ausubel FM, Brent R, Kingston RE, Moore DD, Seidman JG, Smith JA & Struhl K. 2002. *Short Protocols in Molecular Biology*. John Wiley.

Kun LY. 2006. Microbial Biotechnology. World Scientific.

Sambrook J, Russel DW & Maniatis T. 2001. *Molecular Cloning: a Laboratory Manual*. Cold Spring Harbour Laboratory Press.

# MBB 506 MICROBIAL/ INDUSTRIAL BIOTECHNOLOGY 2+1 Objective

To familiarize about the various microbial processes/systems/activities, which have been used for the development of industrially important products/processes.

#### Theory

#### UNIT I

Introduction, scope and historical developments; Isolation, screening and genetic improvement (involving classical approaches) of industrially important organisms.

## UNIT II

Primary metabolism products, production of industrial ethanol as a case study; Secondary metabolites, bacterial antibiotics and non ribosomal peptide antibiotics; Recombinant DNA technologies for microbial processes; Strategies for development of industrial microbial strains with scale up production capacities; Metabolic pathway engineering of microbes for production of novel product for industry.

#### UNIT III

Microbial enzymes, role in various industrial processes, production of fine chemicals for pharmaceutical industries; Bio-transformations, Bio-augmentation with production of vitamin C as a case study; Bioreactors,

their design and types; Immobilized enzymes based bioreactors; Microencapsulation technologies for immobilization of microbial enzymes. UNIT IV

Industrial biotechnology for pollution control, treatment of industrial and other wastes, biomass production involving single cell protein; Bioremediation of soil; Production of eco-friendly agricultural chemicals, biopesticides, bio-herbicides, bio-fertilizers, bio-fuels, etc.

#### **Practical**

- i. Isolation of industrially important microorganisms, their maintenance and improvement.
- ii. Production of industrial compounds such as alcohol, beer, citric acid, lactic acid and their recovery.
- iii. Study of bio-reactors and their operations.
- iv. Production of biofertilizers.
- v. Experiments on microbial fermentation process, harvesting purification and recovery of end products.
- vi. Immobilization of cells and enzymes, studies on its kinetic behavior, growth analysis and biomass estimation.
- vii. Determination mass transfer co-efficients.

## **Suggested Readings**

Huffnagle GB & Wernick S. 2007. The Probiotics Revolution: The Definitive Guide to Safe, Natural Health. Bantam Books.

Kun LY. 2006. Microbial Biotechnology. World Scientific.

Primrose SB. 2001. Molecular Biotechnology. Panima.

## MBB 507 MOLECULAR BREEDING

2+0

#### **Objective**

To familiarize the students about the use of molecular biology tools in plant breeding.

## Theory

## UNIT I

Principles of plant breeding; Breeding methods for self and cross pollinated crops; Heterosis breeding; Limitations of conventional breeding; Aspects of molecular breeding.

#### UNIT II

Development of sequence based molecular markers - SSRs and SNPs; Advanced methods of genotyping; Mapping genes for qualitative and quantitative traits.

#### UNIT III

QTL mapping using structured populations; AB-QTL analysis; Association mapping of QTL; Fine mapping of genes/QTL; Map based gene/QTL isolation and development of gene based markers; Allele mining by TILLING and Eco-TILLING; Use of markers in plant breeding.

#### UNIT IV

Marker assisted selection (MAS) in background and heterosis breeding; Transgenic breeding; Foreground and background selection; MAS for gene introgression and pyramiding: MAS for specific traits with examples.

## **Suggested Readings**

Chittaranjan K. 2006-07. *Genome Mapping and Molecular Breeding in Plants*. Vols. I-VII. Springer.

Newbury HJ. 2003. Plant Molecular Breeding. Blackwell Publ.

Weising K, Nybom H, Wolff K & Kahl G. 2005. DNA Fingerprinting in Plants: Principles, Methods and Applications. Taylor & Francis.

## MBB 508 GENOMICS AND PROTEOMICS 2+0

#### **Objective**

To familiarize the students with recent tools used for genome analysis and their applications.

#### **Theory**

#### UNIT I

Structural genomics: Classical ways of genome analysis, large fragment genomic libraries; Physical mapping of genomes; Genome sequencing, sequence assembly and annotation; Comparative genomics, etc.

## UNIT II

Functional genomics: DNA chips and their use in transcriptome analysis; Mutants and RNAi in functional genomics; Metabolomics and ionomics for elucidating metabolic pathways, etc.

#### **UNIT III**

Proteomics - Protein structure, function and purification; Introduction to basic proteomics technology; Bio-informatics in proteomics; Proteome analysis, etc.

#### **UNIT IV**

Applications of genomics and proteomics in agriculture, human health and industry.

## Suggested Readings

Azuaje F & Dopazo J. 2005. *Data Analysis and Visualization in Genomics and Proteomics*. John Wiley & Sons.

Brown TA. 2007. Genome III. Garland Science Publ.

Campbell AM & Heyer L. 2004. *Discovery Genomics, Proteomics and Bioinformatics*. Pearson Education.

Gibson G & Muse SV. 2004. A Primer of Genome Science. Sinauer Associates.

Kamp RM. 2004. *Methods in Proteome and Protein Analysis*. Springer. Primrose SB & Twyman RM. 2007. *Principles of Genome Analysis and Genomics*. Blackwell.

Sensen CW. 2005. Handbook of Genome Research. Vols. I, II. Wiley CVH.

## MBB 509 TECHNIQUES IN MOLECULAR BIOLOGY-II 0+3

## **Objective**

To provide hands on training on various molecular techniques used in molecular breeding and genomics.

#### **Practical**

#### UNIT I

Construction of gene libraries; Synthesis and cloning of cDNA and RT-PCR analysis; Real time PCR and interpretation of data.

## **UNIT II**

Molecular markers (RAPD, SSR, AFLP etc) and their analysis; Case study of SSR markers (linkage map, QTL analysis etc); SNP identification and analysis; Microarray studies and use of relevant software.

#### UNIT III

Proteomics (2D gels, mass spectrometry, etc.); RNAi (right from designing of construct to the phenotyping of the plant); Yeast 1 and 2-hybrid interaction.

#### **UNIT IV**

Generation and screening of mutants; Transposon mediated mutagenesis.

## **Suggested Readings**

Ausubel FM, Brent R, Kingston RE, Moore DD, Seidman JG, Smith JA & Struhl K. 2002. *Short Protocols in Molecular Biology*. Wiley.

Caldwell G, Williams SN & Caldwell K. 2006. *Integrated Genomics: A Discovery-Based Laboratory Course*. John Wiley.

Sambrook J, Russel DW & Maniatis T. 2001. *Molecular Cloning: a Laboratory Manual*. Cold Spring Harbour Laboratory Press.

## MBB 510 BIOSAFETY, IPR AND BIOETHICS 2+0

#### **Objective**

To discuss about various aspects of biosafety regulations, IPR and bioethic concerns arising from the commercialization of biotech products.

## **Theory**

#### UNIT I

Biosafety and risk assessment issues; Regulatory framework; National biosafety policies and law, The Cartagena protocol on biosafety, WTO and other international agreements related to biosafety, Cross border movement of germplasm; Risk management issues - containment.

#### UNIT II

General principles for the laboratory and environmental biosafety; Health aspects; toxicology, allergenicity, antibiotic resistance, etc; Impact on environment: gene flow in natural and artificial ecologies; Sources of gene escape, tolerance of target organisms, creation of superweeds/superviruses, etc.

#### UNIT III

Ecological aspects of GMOs and impact on biodiversity; Monitoring strategies and methods for detecting transgenics; Radiation safety and non-radio isotopic procedure; Benefits of transgenics to human health, society and the environment.

#### UNIT IV

The WTO and other international agreements; Intellectual properties, copyrights, trademarks, trade secrets, patents, geographical indications, etc; Protection of plant variety and farmers right act; Indian patent act and amendments, patent filing; Convention on biological diversity; Implications of intellectual property rights on the commercialization of biotechnology products.

#### **Suggested Readings**

Singh BD. 2007. Biotechnology: Expanding Horizon. Kalyani.

http://patentoffice.nic.in

www.wipo.org

www.dbtindia.nic.in

www.dbtbiosafety.nic.in

#### **Objective**

Intended to provide an overview and current developments in different areas of animal biotechnology.

## **Theory**

#### UNIT I

Structure of animal cell; History of animal cell culture; Cell culture media and reagents, culture of mammalian cells, tissues and organs, primary culture, secondary culture, continuous cell lines, suspension cultures, somatic cell cloning and hybridization, transfection and transformation of cells, commercial scale production of animal cells, application of animal cell culture for *in vitro* testing of drugs, testing of toxicity of environmental pollutants in cell culture, application of cell culture technology in production of human and animal viral vaccines and pharmaceutical proteins.

#### **UNIT II**

Introduction to immune system, cellular and hormonal immune response, history of development of vaccines, introduction to the concept of vaccines, conventional methods of animal vaccine production, recombinant approaches to vaccine production, hybridoma technology, phage display technology for production of antibodies, antigen-antibody based diagnostic assays including radioimmunoassays and enzyme immunoassays, immunoblotting, nucleic acid based diagnostic methods, commercial scale production of diagnostic antigens and antisera, animal disease diagnostic kits, probiotics.

## UNIT III

Structure of sperms and ovum, cryopreservation of sperms and ova of livestock, artificial insemination, super ovulation, *in vitro* fertilization, culture of embryos, cryopreservation of embryos, embryo transfer, embryo-spliting, embryo sexing, transgenic manipulation of animal embryos, different applications of transgenic animal technology, animal viral vectors, animal cloning basic concept, cloning from-embryonic cells and adult cells, cloning of different animals, cloning for conservation for conservation endangered species, ethical, social and moral issues related to cloning, *in situ* and *ex situ* preservation of germplasm, *in utero* testing of foetus for genetic defects, pregnancy diagnostic kits, anti-fertility animal vaccines, gene knock out technology and animal models for human genetic disorders.

#### UNIT IV

Introduction to different breeds of cattle, buffalo, sheep, goats, pigs, camels, horses, canines and poultry, genetic characterization of livestock breeds, marker assisted breeding of livestock, introduction to animal genomics, different methods for characterization of animal genomes, SNP, STR, QTL, RFLP, RAPD, genetic basis for disease resistance, Transgenic animal production and application in expression of therapeutic proteins. Immunological and nucleic acid based methods for identification of animal species, detection of meat adulteration using DNA based methods, detection food/feed adulteration with animal protein, identification of wild animal species using DNA based methods using different parts including

bones, hair, blood, skin and other parts confiscated by anti-poaching agencies.

Twyman RM. 2003. Advanced Molecular Biology. Bios Scientific.

## MBB 512 IMMUNOLOGY AND MOLECULAR DIAGNOSTICS 2+1

#### **Objective**

To discuss the application of various immunological and molecular diagnostic tools.

#### **Theory**

#### UNIT I

History and scope of immunology; Components of immune system: organs, tissues and cells, Immunoglobulin chemistry, structure and functions; Molecular organization of immunoglobulins and classes of antibodies.

#### UNIT II

Antibody diversity; antigens, haptens, antigens- antibody interactions; immuno-regulation and tolerance; Allergies and hypersensitive response; Immunodeficiency; Vaccines; Immunological techniques.

#### UNIT III

Immunological application in plant science, monoclonal antibodies and their uses, molecular diagnostics. Introduction to the basic principles of molecular technology and techniques used in pathogen detection, Principles of ELISA and its applications in viral detection.

#### **UNIT IV**

Basics and procedures of PCR, Real time PCR, PCR based and hybridization based methods of detection, microarrays based detection, multiplexing etc, detection of soil borne and seed born infections, transgene detection in seed, planting material and processed food, molecular detection of varietal impurities and seed admixtures in commercial consignments.

#### **Practical**

- i. Preparation of buffers and reagents.
- ii. Immunoblotting, immunoelectrophoresis and fluorescent antibody test.
- iii. Enzyme immunoassays including ELISA western blotting.
- iv. Extraction and identification of DNA/RNA of pathogenic organisms.
- v. Restriction hybridoma technique and production of monoclonal antibodies.

vi. Immunogenic proteins, expression and immunogenecity studies, purification of immunogenic protein and immunization of laboratory animals.

Robinson A & Cranage MP. 2003. *Vaccine Protocols*. 2<sup>nd</sup> Ed. Humana Press

Spinger TA, 1985. *Hybridoma Technology in Biosciences and Medicine*. Plenum Press.

#### MBB 513 NANO-BIOTECHNOLOGY

3+0

## **Objective**

Understanding the molecular techniques involved in structure and functions of nano-biomolecules in cells such as DNA, RNA and proteins.

#### **Theory**

#### UNIT I

Introduction to Biomacromolecules: The modern concepts to describe the conformation and dynamics of biological macromolecules: scattering techniques, micromanipulation techniques, drug delivery applications etc.

#### UNIT II

Cellular engineering: signal transduction in biological systems, feedback control signaling pathways, cell-cell interactions etc. Effects of physical, chemical and electrical stimuli on cell function and gene regulation.

#### UNIT III

Chemical, physical and biological properties of biomaterials and bioresponse: biomineralization, biosynthesis, and properties of natural materials (proteins, DNA, and polysaccharides), structure-property relationships in polymeric materials (synthetic polymers and structural proteins); Aerosol properties, application and dynamics; Statistical Mechanics in Biological Systems,

#### UNIT IV

Preparation and characterization of nanoparticles; Nanoparticular carrier systems; Micro- and Nano-fluidics; Drug and gene delivery system; Microfabrication, Biosensors, Chip technologies, Nano- imaging, Metabolic engineering and Gene therapy.

#### **Suggested Readings**

Nalwa HS. 2005. Handbook of Nanostructured Biomaterials and Their Applications in Nanobiotechnology. American Scientific Publ.

Niemeyer CM & Mirkin CA. 2005. *Nanobiotechnology*. Wiley Interscience.

#### **Objective**

This course is aimed at understanding the basic concepts of genetics, helping students to develop their analytical, quantitative and problem-solving skills from classical to molecular genetics.

## **Theory**

## <u>UNIT I</u>

Early concepts of inheritance; Discussion on Mendel's paper; Sex determination, differentiation and sex-linkage, Sex-influenced and sex-limited traits; Linkage, recombination and genetic mapping in eukaryotes, Somatic cell genetics.

## UNIT II

Structural and numerical changes in chromosomes; Nature, structure and replication of the genetic material; Organization of DNA in chromosomes; Mutations and mutagenic agents.

#### UNIT III

Genetic code and protein biosynthesis; Gene regulation, Genes in development; Extra chromosomal inheritance, Male sterility and incompatibility; Recombination in bacteria, fungi and viruses, tetrad analysis.

#### UNIT IV

Inheritance of quantitative traits; Concepts in population genetics; Genes and behavior; Genetics and evolution; Recombinant DNA technology; Genetic fine structure analysis, Split genes, Transposable genetic elements, Overlapping genes, Pseudogenes, Oncogenes, Gene families; An overview of some recent discoveries in the field of genetics.

#### **Practical**

- i. Laboratory exercises in probability and chi-square.
- ii. Demonstration of genetic principles using laboratory organisms.
- iii. Chromosome mapping using three point test cross.
- iv. Tetrad analysis.
- v. Induction and detection of mutations through genetic tests.
- vi. Pedigree analysis in humans.
- vii. Numerical problems on Hardy Weinberg Equilibrium, Quantitative inheritance and Molecular genetics.

#### MBB 552 BASIC BIOCHEMISTRY

2+1

#### **Objective**

To provide elementary knowledge/overview of structure, functions and metabolism of biomolecules.

#### **Theory**

#### UNIT I

Scope and importance of biochemistry in agriculture; Fundamental principles governing life; structure of water; acid base concept and buffers; pH; hydrogen bonding; hydrophobic, electrostatic and Van der Waals forces; General introduction to physical techniques for determination of structure of biopolymers.

#### UNIT II

Classification, structure and function of carbohydrates, lipids and biomembranes, amino acids, proteins, and nucleic acids.

#### UNIT III

Structure and biological functions of vitamins, enzymes classification and mechanism of action; regulation, factors affecting enzyme action. Fundamentals of thermodynamic principles applicable to biological processes, Bioenergetics.

#### UNIT IV

Metabolism of carbohydrates, photosynthesis and respiration, oxidative phosphorylation, lipids, proteins and nucleic acids. DNA replication, transcription and translation; recombinant DNA technology, Nutritional aspects of carbohydrates, lipids, proteins and minerals.

#### **Practical**

- i. Preparation of standard and buffer solutions.
- ii. Extraction and estimation of sugars and amino acids.
- iii. Estimation of proteins by Lowry's method.
- iv. Estimation of DNA and RNA by Diphenyamine and orcinol methods.
- v. Estimation of ascorbic acid.
- vi. Separation of biomolecules by TLC and paper chromatography

#### **Suggested Readings**

Conn EE & Stumpf PK. 1987. Outlines of Biochemistry. John Wiley.

Metzler DE. Biochemistry. Vols. I, II. Wiley International.

Nelson DL & Cox MM. 2004. Lehninger's Principles of Biochemistry. MacMillan.

Voet D & Voet JG. *Biochemistry*. 3<sup>rd</sup> Ed. Wiley International.

## MBB 553 BIOSTATISTICS AND COMPUTERS 2+1

## **Objective**

This is the special course for M.Sc. students of Biotechnology. They are exposed to various statistical methods to analyze their experimental data.

## Theory

#### UNIT I

Aims, scope and idea of elementary statistics; Measures of central tendency and dispersion, skewness and kurtosis.

#### <u>UNIT II</u>

Concept of probability and probability laws, mathematical expectation, moments, moments generating function; Standard probability distributions- Binomial, Poisson and Normal distributions.

## **UNIT III**

Tests of significance based on Z,  $\chi^2$ , t and F statistics; Correlation and regression, curve fitting by least squares methods.

#### UNIT IV

Basic principles, organization and operational aspects of computers, operating systems. Introduction to MS-Office, MS-Word, MS-Excel. Statistical Data analysis based on above topics through MS-Excel.

#### **Practical**

- i. Data analysis using probability, test of significance
- ii. Correlation and regression analysis
- iii. Usage of MS-Windows
- iv. Exercises on test processing, spreadsheet and DBMS
- v. SPSS

## **Suggested Readings**

Agarwal BL. 2003. Basic Statistics. New Age.

Gupta SP. 2004. Statistical Methods. S. Chand & Sons.

Dutta NK. 2002. Fundamentals of Bio-Statistics. Kanishka Publ.

## MBB 554 PRINCIPLES OF MICROBIOLOGY 2+1

## **Objective**

To acquaint the students with history, classification and role of microbiology in agriculture, food and environment.

## **Theory**

#### UNIT I

Development of Microbiology in the 18<sup>th</sup> and 19<sup>th</sup> century. Morphology, structure and function of prokaryotic and eukaryotic cell. Archea. Classification of prokaryotes – Basic principles and techniques used in bacterial classification.

#### UNIT II

Evolutionary relationship among prokaryotes. Phylogenetic and numerical taxonomy. Use of DNA and r-RNA sequencing in classifications.

#### UNIT III

Study of major groups of bacteria belonging to Gracilicutes, Firmicutes, Tanericutes and Mendosicutes.

#### UNIT IV

Viruses – morphology, classification and replication of plant, animal and bacterial viruses. Cultivation methods of viruses. Immune response – specific and non-specific resistance. Normal microflora of human body; some common bacterial and viral diseases of humans and animals.

#### **Practical**

- i. Methods of isolation, purification and maintenance of microorganisms from different environments (air, water, soil, milk and food).
- ii. Enrichment culture technique isolation of asymbiotic, symbiotic nitrogen fixing bacteria. Isolation of photosynthetic bacteria.
- iii. Use of selective media, antibiotic resistance and isolation of antibiotic producing microorganisms.
- iv. Morphological, physiological and biochemical characterization of bacteria.

#### **Suggested Readings**

Brock TD. 1961. Milestones in Microbiology. Infinity Books.

Pelczar ML Jr. 1997. Microbiology. Tata McGraw Hill.

Stainier RY, Ingraham JL, Wheelis ML & Painter PR. 2003. *General Microbiology*. MacMillan.

Tauro P, Kapoor KK & Yadav KS. 1996. *Introduction to Microbiology*. Wiley Eastern.

## MBB 555 INTRODUCTION TO BIOINFORMATICS 2+1

## **Objective**

To impart an introductory knowledge about the subject of bioinformatics to the students studying any discipline of science.

## **Theory**

#### UNIT I

Introduction, biological databases – primary, secondary and structural, Protein and Gene Information Resources – PIR, SWISSPROT, PDB, genebank, DDBJ. Specialized genomic resources.

#### UNIT II

DNA sequence analysis, cDNA libraries and EST, EST analysis, pairwise alignment techniques, database searching, multiple sequence alignment.

#### UNIT III

Secondary database searching, building search protocol, computer aided drug design – basic principles, docking, QSAR.

#### UNIT IV

Analysis packages – commercial databases and packages, GPL software for Bioinformatics, web-based analysis tools.

#### **Practical**

- i. Usage of NCBI resources
- ii. Retrival of sequence/structure from databases
- iii. Visualization of structures
- iv. Docking of ligand receptors
- v. BLAST exercises.

#### **Suggested Readings**

Attwood TK & Parry-Smith DJ. 2003. *Introduction to Bioinformatics*. Pearson Education.

Rastogi SC, Mendiratta N & Rastogi P. 2004. *Bioinformatics: Concepts, Skills and Applications*. CBS.

## BMB 556 ENVIRONMENTAL BIOTECHNOLOGY 3+0

#### **Objective**

To apprise the students about the role of biotechnology in environment management for sustainable eco-system and human welfare.

#### Theory

#### UNIT I

Basic concepts and environmental issues; types of environmental pollution; problems arising from high-input agriculture; methodology of environmental management; air and water pollution and its control; waste water treatment - physical, chemical and biological processes; need for water and natural resource management.

## UNIT II

Microbiology and use of micro-organisms in waste treatment; biodegradation; degradation of Xenobiotic, surfactants; bioremediation of soil & water contaminated with oils, pesticides & toxic chemicals,

detergents etc; aerobic processes (activated sludge, oxidation ditches, trickling filter, rotating drums, etc); anaerobic processes: digestion, filteration, etc.

#### **UNIT III**

Renewable and non-Renewable resources of energy; energy from solid waste; conventional fuels and their environmental impact; biogas; microbial hydrogen production; conversion of sugar to alcohol; gasohol; biodegradation of lignin and cellulose; biopesticides; biofertilizers; composting; vermiculture, etc.

#### UNIT IV

Treatment schemes of domestic waste and industrial effluents; food, feed and energy from solid waste; bioleaching; enrichment of ores by microorganisms; global environmental problems: ozone depletion, UV-B, greenhouse effects, and acid rain; biodiversity and its conservation; biotechnological approaches for the management environmental problems.

## **Suggested Readings**

Evans GM & Furlong JC. 2002. *Environmental Biotechnology: Theory and Application*. Wiley International.

Jordening H-J & Winter J. 2006. *Environmental Biotechnology: Concepts and Applications*. Wiley-VCH Verlag.

#### **MBB 557**

#### MOLECULAR CYTOGENETICS

(2+1)

## **Theory**

#### UNIT-I

Molecular anatomy of eukaryotic chromosomes: Metaphase chromosome, centromere, kinetochore, telomere and its maintenance, Repeat sequences of centromere and telomeres of chromosome, Heterochromatine and Euchromatain, chromosome banding-basis, techniques and applications.

#### UNIT-II

Chromosome replication, Artificial chromosomes: synthesis and applications. Organellar genomes: genome organization in chloroplasts and mitochondria, manipulation of organellar genomes and their applications. Genome analysis-significance and uses; Modern methods of genome analysis.

#### **UNIT-III**

Location and mapping of genes on chromosomes: genetic, physical and molecular maps, molecular mapping and tagging of genes, Introduction to molecular cytogenetic techniques- *In situ* hybridization, chromosome painting FISH and GISH in plants, their significance and applications in crop improvement, genomic southern hybridization, DNA finger printing repeated nucleotide sequences and simple sequence repeats (SSR)

## UNIT-IV

Flow cytometry and chromosome sorting, Automated karyotyping, immunocytochemistry, micro-spectrophotometry, microdissection, microinjection, microcloning, chromosome-based cloning. Cell cycle analysis and control mechanisms; molecular machinery for cell division; molecular analysis of meiosis and recombination, Moelcular cytotgenetics and evolutionary patterns; C- value paradox- DNA content and adaptability. The concept of gene synteny, colinearity among genomes and synteny.

#### **Practicals:**

1. Study of chromosomes during meiosis

- 2. Staining of metaphase chromosomes Chromosomal banding stain with giemsa fluorescent dye
- 3. Polytene chromosomes banding Chironomus / Drosophila larva
- 4. Structural abnormalities in chromosomes (Rhoeo plant mature)
- 5. Induction of polyploidy using colchicines
- 6. Identification of polyploids through cytomorphology, cytometry, DNA Quantification and other molecular techniques
- 7. Demonstration/exploration of FISH, GISH, DNA Finger printing

#### **MBB 558**

#### **MOLECULAR FARMING**

(1+1)

## **Theory**

## Unit I

Definition and scope of molecular farming, Critical needs for vaccine development, Potential to meet critical needs, Scientific back ground on plant-based vaccines. Why GMO for edible vaccines?

#### **Unit-II**

Plant based recombinant proteins as valuable drugs, first generation products, and plant patents. Methods of molecular farming, nuclear transformation and Chloroplast transformation. Invention of use for molecular farming.

#### **Unit-III**

Molecular farming for protein production, Molecular farming antibodies in plants, Molecular farming for vaccines in plants and Molecular farming product recovery methods.

#### **Unit-IV**

Molecular farming information on plant made pharmaceuticals and biopharmaceuticals from genetically engineered plants, Transgenic plants for immunotherapy, Strategy for expression of antigens in plants.

## **Practicals:**

Various tissue culture techniques:

Media preparation, preparation of different types of culture including suspension cultures, transformation, regeneration techniques, co-cultivation, selection, confirmation using PCR techniques, extraction of recombinant protein using techniques like Rhizo extraction, SDS –PAGE analysis for quantification.

# MBB 601 ADVANCES IN PLANT MOLECULAR BIOLOGY 3+0 Objective

To discuss the specialized topics and recent advances in the field of plant molecular biology.

## **Theory**

#### UNIT I

*Arabidopsis* in molecular biology, Forward and Reverse Genetic Approaches, Transcriptional and post-transcriptional regulation of gene expression, isolation of promoters and other regulatory elements.

#### UNIT II

RNA interference, Transcriptional gene silencing, Transcript and protein analysis, use of transcript profiling to study biological systems.

#### UNIT III

Hormone regulatory pathways: Ethylene, Cytokinin, Auxin and ABA, SA and JA; ABC Model of Floral Development, Molecular basis of self incompatibility, Regulation of flowering: photoperiod, vernalization, circadian rhythms.

#### UNIT IV

Molecular biology of abiotic stress responses: Cold, high temperature, submergence, salinity and drought; Molecular Biology of plant-pathogen interactions, molecular biology of *Agrobacterium* Infection, Molecular biology of *Rhizobium* infection (molecular mechanisms in symbiosis), Programmed cell death in development and defense.

#### **Suggested Readings**

Watson JD, Bakee TA, Bell SP, Gann A, Levine M & Losick R. 2008. *Molecular Biology of the Gene*. 6<sup>th</sup> Ed. Pearson Education.

## MBB 602 ADVANCES IN GENETIC ENGINEERING 3+0

## **Objective**

To discuss the specialized topics and advances in field of genetic engineering and their application in plant improvement.

## **Theory**

#### UNIT I

General overview of transgenic plants; Case studies: Genetic engineering of herbicide resistance, Transgenic plants resistant to insects/pests, Genetic engineering of abiotic stress tolerance, Engineering food crops for quality, Genetically engineered pollination control, Induction of male sterility in plants.

#### UNIT II

Molecular farming of plants for applications in veterinary and human medicine systems: Boosting heterologous protein production in transgenics, Rapid production of specific vaccines, High-yield production of therapeutic proteins in chloroplasts.

#### UNIT III

Recent developments in plant transformation strategies; Role of antisense and RNAi-based gene silencing in crop improvement; Regulated and tissue-specific expression of transgenes for crop improvement; Gene stacking; Pathway engineering; Marker-free transgenic development strategies; High throughput phenotyping of transgenic plants.

#### UNIT IV

Field studies with transgenic crops; Environmental issues associated with transgenic crops; Food and feed safety issues associated with transgenic crops; Risk assessment of transgenic food crops.

#### **Suggested Readings**

Christou P & Klee H. 2004. *Handbook of Plant Biotechnology*. John Wiley & Sons.

Specific journals mentioned later.

## MBB 603 ADVANCES IN MICROBIAL BIOTECHNOLOGY 3+0

#### **Objective**

To discuss specialized topics about industrially important microorganisms.

## **Theory**

#### **UNIT I**

Fermentative metabolism and development of bioprocessing technology, processing and production of recombinant products; isolation, preservation and improvement of industrially important microorganisms.

#### UNIT II

Immobilization of enzymes and cells; Batch, plug flow and chemostate cultures; Computer simulations; Fed-batch and mixed cultures; Scale-up principles; Down stream processing etc.

#### UNIT III

Current advances in production of antibiotics, vaccines, and biocides; Steroid transformation; Bioreactors; Bioprocess engineering; Production of non-microbial origin products by genetically engineered microorganisms.

#### UNIT IV

Concept of probiotics and applications of new tools of biotechnology for quality feed/food production; Microorganisms and proteins used in probiotics; Lactic acid bacteria as live vaccines; Factors affecting delignification; Bioconversion of substrates, anti-nutritional factors present in feeds; Microbial detoxification of aflatoxins; Single cell protein, Bioinsecticides; Biofertilizers; Recent advances in microbial biotechnology.

## **Suggested Readings**

Specific journals and published references.

## MBB 604 ADVANCES IN CROP BIOTECHNOLOGY 3+0

#### **Objective**

To discuss specialized topics on the application of molecular tools in breeding of specific crops.

## Theory

#### UNIT I

Conventional versus non-conventional methods for crop improvement; Present status and recent developments on available molecular marker, transformation and genomic tools for crop improvement.

#### UNIT II

Genetic engineering for resistance against abiotic (drought, salinity, flooding, temperature, etc) and biotic (insect pests, fungal, viral and bacterial diseases, weeds, etc) stresses; Genetic Engineering for increasing crop productivity by manipulation of photosynthesis, nitrogen fixation and nutrient uptake efficiency; Genetic engineering for quality improvement (protein, essential amino acids, vitamins, mineral nutrients, etc); edible vaccines, etc.

#### UNIT III

Molecular breeding: constructing molecular maps; integrating genetic, physical and molecular maps; diversity assessment and phylogenetic analysis; molecular tagging of genes/traits; selected examples on marker-assisted selection of qualitative and quantitative traits.

#### UNIT IV

Discussion on application of molecular, transformation and genomic tools for the genetic enhancement in some major field crops such as rice, wheat, cotton, maize, soybean, oilseeds, sugarcane etc.

## **Suggested Readings**

Specific journals and published references.

## MBB 605 ADVANCES IN FUNCTIONAL GENOMICS 2+0 AND PROTEOMICS

#### **Objective**

To discuss recent advances and applications of functional genomics and proteomics in agriculture, medicine and industry.

#### Theory

#### UNIT I

Genome sequencing and functional genomics; Human, animal, plant, bacterial and yeast genome projects; genome annotation; *ab initio* gene discovery; functional annotation and gene family clusters; etc.

#### UNIT II

Functional analysis of genes; RNA-mediated interference; gene knockoffs; Gene traps/ T-DNA insertion lines; homologous recombination; microarray profiling; SAGE; SNPs/variation; yeast-two hybrid screening; gene expression and transcript profiling; EST contigs; EcoTILLING; allele/gene mining; synteny and comparative genomics; Genome evolution, speciation and domestication etc.

## **UNIT II**

Proteomics: protein annotation; protein separation and 2D PAGE; mass spectroscopy; protein microarrays; protein interactive maps; structural proteomics: protein structure determination, prediction and threading, software and data analysis/ management, etc.

#### UNIT IV

Discussion on selected papers on functional genomics, proteomics, integrative genomics etc.

#### **Suggested Readings**

Specific journals and published references.

#### MBB 606 COMMERCIAL PLANT TISSUE CULTURE 2+0

#### **Objective**

To discuss the commercial applications of plant tissue culture in agriculture, medicine and industry.

#### Theory

#### UNIT I

Micropropagation of commercially important plant species; plant multiplication, hardening, and transplantation; genetic fidelity; scaling up and cost reduction; bioreactors; synthetic seeds; management and marketing.

#### UNIT II

Production of useful compounds via biotransformation and secondary metabolite production: suspension cultures, immobilization, examples of chemicals being produced for use in pharmacy, medicine and industry.

#### **UNIT III**

Value-addition by transformation; development, production and release of transgenic plants; patent, bio-safety, regulatory, environmental and ethic issues; management and commercialization.

#### UNIT IV

Some case studies on success stories on commercial applications of plant tissue culture. Visits to some tissue culture based commercial units/industries.

## **Suggested Readings**

Specific journals and published references.

#### **MBB 607**

#### ADVANCES IN ANIMAL BIOTECHNOLOGY 2+0

#### **Objective**

Intended to provide cutting edge knowledge on advances in different areas of animal biotechnology.

## **Theory**

## UNIT I

Advances in animal cell culture technology, suspension culture technology, advances in commercial scale productions of mammalian cells.

#### UNIT II

Advances in cell cloning and cell hybridization, advances in monoclonal antibody production technology, Advances in diagnostic technology, Computational vaccinology, reverse genetics based vaccines.

#### UNIT III

Advances in embryo manipulation, knock out and knock in technology, advances in animal cloning technology, stem cell technology, Advances in development of animal models for human diseases using transgenic animal technology.

## UNIT IV

Advances in genetic basis for animal disease resistance, Molecular methods for animal forensics, Advances in animal genomics, proteomics,

## **Suggested Readings**

Selected articles from journals.

- TM Micropropagation of important crop plants, cash crops, ornamentals, forest and horticultural trees, medicinal and aromatic plants.
- TM Development of transgenics in field crops for resistance against biotic and abiotic stresses, and to improve the nutritional quality, etc.
- TM DNA fingerprinting of important plant species and germplasm.
- TM Development of molecular markers (SNP, SSR, transposable elements, etc) and their utilization for genetic diversity and phylogenetic analysis.
- TM Molecular mapping and marker-assisted selection for major-gene traits in crop species.
- TM Value-addition including biopesticides, biofertilizers, biofuels, biodegradable plastics, secondary metabolites, etc.
- TM Genome sequencing and functional analysis of genes of important organisms.
- TM Allele mining, proteomics, genomics and metabolic engineering for crop improvement.
- TM Immobilization of enzymes/microorganisms.
- TM Protein engineering.
- To develop crops with improved mineral (Fe, Zn, Vitamin A, etc) bioavailbility.
- TM Biodiversity and conservation of endangered plant species.
- TM Bioprocess engineering and downstream processing.

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

## Plant Sciences

Genetics & Plant Breeding Seed Science & Technology

Gujarat Agricultural Universities (Anand, Sardarkrushinagar, Navsari, Junagadh) May 2010

#### **EXECUTIVE SUMMARY**

## 1. Genetics and Plant Breeding

- New courses including topics in biotechnology, molecular breeding, molecular genetics, maintenance breeding and plant genetic resources were included in the new syllabus.
- Provisions are made to train the students in modern breeding and seed production methods through in-service training.
- Tie-up with private sector seed companies for doing research by the Masters & Doctoral students.
- Practical classes were included in the curriculum for visiting the private sector companies involved in breeding & seed production and genomic research
- A course on "Principles of seed production" is also offered to the Genetics & Plant Breeding students as an optional course.

#### 2. Seed Science and Technology

- New courses and topics including DUS testing and PVP, Maintenance Breeding, Seed Advancement Technologies, Marker Based Seed Purity evaluation & Cultivar identification, and Evaluation and Conservation of Plant Genetic Resources have been included in the new syllabus.
- Provisions are made to train students in modern seed production, processing, marketing and quality control methods through students' attachment with the public/ private sector organizations.
- Tie-up with private sector seed companies for doing research by the Masters & Doctoral students.
- Practical classes are included in the curriculum for visiting the private and public sector seed companies, certification agencies, quarantine facility and NBPGR.
- Strengthening the infrastructure facilities and training of teacher staffs in the SAUs.

# GENETICS AND PLANT BREEDING <u>Course Contents</u>

#### GP 501 PRINCIPLES OF GENETICS

2+1

#### **Objective**

This course is aimed at understanding the basic concepts of genetics, helping students to develop their analytical, quantitative and problem-solving skills from classical to molecular genetics.

#### **Theory**

#### UNIT I

Beginning of genetics; Cell structure and cell division; Early concepts of inheritance, Mendel's laws; Discussion on Mendel's paper, Chromosomal theory of inheritance.

#### UNIT II

Multiple alleles, Gene interactions. Sex determination, differentiation and sex-linkage, Sex-influenced and sex-limited traits; Linkage-detection, estimation; Recombination and genetic mapping in eukaryotes, Somatic cell genetics, Extra chromosomal inheritance.

## UNIT III

Population - Mendelian population - Random mating population - Frequencies of genes and genotypes-Causes of change: Hardy-Weinberg equilibrium.

## **UNIT IV**

Structural and numerical changes in chromosomes; Nature, structure and replication of the genetic material; Organization of DNA in chromosomes, Genetic code; Protein biosynthesis.

#### UNIT V

Genetic fine structure analysis, Allelic complementation, Split genes, Transposable genetic elements, Overlapping genes, Pseudogenes, Oncogenes, Gene families and clusters.

## UNIT VI

Regulation of gene activity in prokaryotes; Molecular mechanisms of mutation, repair and suppression; Bacterial plasmids, insertion (IS) and transposable (Tn) elements; Molecular chaperones and gene expression. Gene regulation in eukaryotes, RNA editing.

#### UNIT VII

Gene isolation, synthesis and cloning, genomic and cDNA libraries, PCR-based cloning, positional cloning; Nucleic acid hybridization and immunochemical detection; DNA sequencing; DNA restriction and modification, Anti-sense RNA and ribozymes; Micro-RNAs (miRNAs).

## UNIT VIII

Genomics and proteomics; Functional and pharmacogenomics; Metagenomics.

#### UNIT IX

Methods of studying polymorphism at biochemical and DNA level; Transgenic bacteria and bioethics; Gene silencing; genetics of mitochondria and chloroplasts.

#### UNIT X

Concepts of Eugenics, Epigenetics, Genetic disorders and Behavioural genetics.

#### **Practical**

Laboratory exercises in probability and chi-square; Demonstration of genetic principles using laboratory organisms; Chromosome mapping using three point test cross; Tetrad analysis; Induction and detection of mutations through genetic tests; DNA extraction and PCR amplification - Electrophoresis – basic principles and running of amplified DNA - Extraction of proteins and isozymes – use of *Agrobacterium* mediated method and Biolistic gun; practical demonstrations - Detection of transgenes in the exposed plant material; visit to transgenic glasshouse and learning the practical considerations.

## GP 502 PRINCIPLES OF CYTOGENETICS

2+1

## **Objective**

To provide insight into structure and functions of chromosomes, chromosome mapping, polyploidy and cytogenetic aspects of crop evolution.

#### **Theory**

#### UNIT I

Architecture of chromosome in prokaryotes and eukaryotes; Chromonemata, chromosome matrix, chromomeres, centromere, secondary constriction and telomere; Artificial chromosome construction and its uses; Special types of chromosomes.

#### UNIT II

Chromosomal theory of inheritance – Cell Cycle and cell division – mitosis and meiosis; Differences, significance and deviations – Synapsis, structure and function of synaptonemal complex and spindle apparatus, anaphase movement of chromosomes and crossing over-mechanisms and theories of crossing over-recombination models, cytological basis, - Variation in chromosome structure: Evolutionary significance - Introduction to techniques for karyotyping; Chromosome banding and painting - *in situ* hybridization and various applications.

#### UNIT III

Structural and Numerical variations of chromosomes and their implications - Symbols and terminologies for chromosome numbers - euploidy - haploids, diploids and polyploids; Utilization of aneuploids in gene location - Variation in chromosome behaviour - somatic segregation and chimeras — endomitosis and somatic reduction; Evolutionary significance of chromosomal aberrations - balanced lethals and chromosome complexes.

#### UNIT IV

Inter-varietal chromosome substitutions; Polyploidy and role of polyploids in crop breeding; Evolutionary advantages of autopolyploids vs allopolyploids — Role of aneuploids in basic and applied aspects of crop breeding, their maintenance and utilization in gene mapping and gene blocks transfer — Alien addition and substitution lines — creation and utilization; Apomixis - Evolutionary and genetic problems in crops with apomixes.

## UNIT V

Reversion of autopolyploids to diploids; Genome mapping in polyploids - Interspecific hybridization and allopolyploids; Synthesis of new crops (wheat, triticale and brassica) — Hybrids between species with same chromosome number, alien translocations - Hybrids between species with different chromosome number; Gene transfer using amphidiploids - Bridge species.

## UNIT VI

Fertilization barriers in crop plants at pre-and postfertilization levels- *In vitro* techniques to overcome the fertilization barriers in crops; Chromosome manipulations in wide hybridization; case studies – Production and use of haploids, dihaploids and doubled haploids in genetics and breeding.

#### **Practical**

Learning the cytogenetics laboratory, various chemicals to be used for fixation, dehydration, embedding, staining, cleaning etc. - Microscopy: various types of microscopes, - Observing sections of specimen using Electron microscope; Preparing specimen for observation - Fixative preparation and fixing specimen for light microscopy studies in cereals -Studies on the course of mitosis in wheat, pearl millet - Studies on the course of mitosis in onion and Aloe vera - Studies on the course of meiosis in cereals, millets and pulses - Studies on the course of meiosis in oilseeds and forage crops - Using micrometers and studying the pollen grain size in various crops -Various methods of staining and preparation of temporary and permanent slides - Pollen germination in vivo and in vitro; Microtomy and steps in microtomy; Agents employed for the induction of various ploidy levels; Solution preparation and application at seed, seedling level -Identification of polyploids in different crops - Induction and identification of haploids; Anther culture and Ovule culture -Morphological observations on synthesized autopolyploids - Observations on C-mitosis, learning on the dynamics of spindle fibre assembly - Morphological observations on alloployploids - Morphological observations on aneuploids - Cytogenetic analysis of interspecific and intergeneric crosses Maintenance of Cytogenetic stocks and their importance in crop breeding -Various ploidy levels due to somaclonal variation; Polyploidy in ornamental crops. -Fluorescent in situ hybridization (FISH)- Genome in situ hybridization GISH.

## GP 503 PRINCIPLES OF PLANT BREEDING 2+1

## **Objective**

To impart theoretical knowledge and practical skills about plant breeding objectives, modes of reproduction and genetic consequences, breeding methods for crop improvement.

#### Theory

#### UNIT I

History of Plant Breeding (Pre and post-Mendelian era); Objectives of plant breeding, characteristics improved by plant breeding; Patterns of Evolution in Crop Plants- Centres of Origin-biodiversity and its significance.

## <u>UNIT</u> II

Genetic basis of breeding self- and cross - pollinated crops including mating systems and response to selection - nature of variability, components of variation; Heritability and genetic advance, genotype-environment interaction; General and specific combining ability; Types of gene actions and implications in plant breeding; Plant introduction and role of plant genetic resources in plant breeding.

#### UNIT III

Self-incompatibility and male sterility in crop plants and their commercial exploitation.

#### UNIT III

Pure line theory, pure line selection and mass selection methods; Line breeding, pedigree, bulk, backcross, single seed descent and multiline method; Population breeding in self-pollinated crops (diallel selective mating approach).

#### UNIT IV

Breeding methods in cross pollinated crops; Population breeding-mass selection and ear-to-row methods; S1 and S2 progeny testing, progeny selection schemes, recurrent selection schemes for intra and interpopulation improvement and development of synthetics and composites; Hybrid breeding - genetical and physiological basis of heterosis and inbreeding, production of inbreds, breeding approaches for improvement of inbreds, predicting hybrid performance; seed production of hybrid and their parent varieties/inbreds.

#### UNIT V

Breeding methods in asexually/clonally propagated crops, clonal selection apomixes, clonal selection.

#### UNIT VI

Self-incompatibility and male sterility in crop plants and their commercial exploitation; Concept of plant ideotype and its role in crop improvement; Transgressive breeding.

## UNIT VII

Special breeding techniques- Mutation breeding; Breeding for abiotic and biotic stresses.

#### **UNIT VIII**

Cultivar development- testing, release and notification, maintenance breeding, Participatory Plant Breeding, Plant breeders' rights and regulations for plant variety protection and farmers rights.

#### **Practical**

Floral biology in self and cross pollinated species, selfing and crossing techniques. Selection methods in segregating populations and evaluation of breeding material; Analysis of variance (ANOVA); Estimation of heritability and genetic advance; Maintenance of experimental records; Learning techniques in hybrid seed production using male-sterility in field crops.

## GP 504 PRINCIPLES OF QUANTITATIVE GENETICS 2+1

#### **Objective**

To impart theoretical knowledge and computation skills regarding component of variation and variances, scales, mating designs and gene effects.

#### **Theory**

#### <u>UNIT I</u>

Mendelian traits *vs* polygenic traits - nature of quantitative traits and its inheritance - Multiple factor hypothesis - analysis of continuous variation; Variations associated with polygenic traits - phenotypic, genotypic and

environmental - non-allelic interactions; Nature of gene action - additive, dominance, epistatic and linkage effects.

#### UNIT II

Principles of Anaylis of Variance (ANOVA) - Expected variance components, random and fixed models; MANOVA, biplot analysis; Comparison of means and variances for significance.

#### UNIT III

Designs for plant breeding experiments – principles and applications; Genetic diversity analysis – metroglyph, cluster and  $D^2$  analyses – Association analysis - phenotypic and genotypic correlations; Path analysis and Parent - progeny regression analysis; Discriminant function and principal component analyses; Selection indices - selection of parents; Simultaneous selection models- concepts of selection - heritability and genetic advance.

#### UNIT IV

Generation mean analysis; Mating designs- Diallel, partial diallel, line x tester analysis, NCDs and TTC; Concepts of combining ability and gene action; Analysis of genotype x environment interaction - adaptability and stability; Models for GxE analysis and stability parameters; AMMI analysis – principles and interpretation.

#### UNIT V

QTL mapping; Strategies for QTL mapping - desired populations for QTL mapping - statistical methods in QTL mapping - QTL mapping in Genetic analysis; Marker assisted selection (MAS) - Approaches to apply MAS in Plant breeding - selection based on marker - simultaneous selection based on marker and phenotype - factors influencing MAS.

#### **Practical**

Problems on multiple factors inheritance - Partitioning of variance - Estimation of heritability and genetic advance - Covariance analysis - Metroglyph analysis - D² analysis - Grouping of clusters and interpretation - Cluster analysis - Construction of cluster diagrams and dendrograms - interpretation - Correlation analysis - Path analysis - Parent-progeny regression analysis - Diallel analysis: Griffing's methods I and II - Diallel analysis: Hayman's graphical approach - Diallel analysis: interpretation of results - NCD and their interpretations - Line x tester analysis and interpretation of results - Estimation of heterosis : standard, mid-parental and better-parental heterosis - Estimation of inbreeding depression - Generation mean analysis: Analytical part and Interpretation - Estimation of different types of gene actions.

Partitioning of phenotypic variance and co-variance into components due to genotypes, environment and genotype x environment interactions - Construction of saturated linkage maps and QTL mapping - Strategies for QTL mapping; statistical methods in QTL mapping; Phenotype and Marker linkage studies - Working out efficiency of selection methods in different populations and interpretation, Biparental mating, Triallel analysis, Quadriallel analysis and Triple Test Cross (TTC) – use of softwares in analysis and result interpretation, Advanced biometrical models for combining ability analysis, Models in stability analysis Additive Main Effect and Multiplicative Interaction (AMMI) model - Principal Component Analysis model - Additive and multiplicative model - Shifted

multiplicative model - Analysis and selection of genotypes - Methods and steps to select the best model - Selection systems - Biplots and mapping genotypes.

## GP 505 MUTAGENESIS AND MUTATION BREEDING 1+1

#### **Objective**

To impart the knowledge about general principles of radiation and various tests/methods for detection of radiation effects on the living cells, genetic risks involved and perspectives of advances made.

## Theory

#### UNIT I

Mutation and its history - Nature and classification of mutations: spontaneous and induced mutations, micro and macro mutations, pre and post adaptive mutations - Detection of mutations in lower and higher organisms – paramutations.

#### UNIT II

Mutagenic agents: physical -- Radiation types and sources: Ionising and non-ionizing radiations viz., X rays,  $\gamma$  rays, ,  $\alpha$  and  $\beta$  particles, protons, neutrons and UV rays - Radiobiology: mechanism of action of various radiations (, photoelectric absorption, Compton scattering and pair production) and their biological effects –RBE and LET relationships.

#### UNIT III

Effect of mutations on DNA - Repair mechanisms operating at DNA, chromosome, cell and organism level to counteract the mutation effects - Dosimetry - Objects and methods of treatment - Factors influencing mutation: dose rate, acute *vs* chronic irradiation, recurrent irradiation, enhancement of thermal neutron effects - Radiation sensitivity and modifying factors: External and internal sources- Oxygen, water content, temperature and nuclear volume.

#### UNIT IV

Chemical mutagens- Classification - Base analogues, antibiotics, alkylating agents, acridine dyes and other mutagens: their properties and mode of action - Dose determination and factors influencing chemical mutagenesis - Treatment methods using physical and chemical mutagens - Combination treatments; Other causes of mutation - direct and indirect action, comparative evaluation of physical and chemical mutagens.

#### UNIT V

Observing mutagen effects in  $M_1$  generation: plant injury, lethality, sterility, chimeras  $\it{etc.}$ , - Observing mutagen effects in  $M_2$  generation - Estimation of mutagenic efficiency and effectiveness — spectrum of chlorophyll and viable mutations — Mutations in traits with continuous variation.

#### UNIT VI

Factors influencing the mutant spectrum: genotype, type of mutagen and dose, pleiotropy and linkage  $\it{etc}$ . - Individual plant based mutation analysis and working out effectiveness and efficiency in  $M_3$  generation - Comparative evaluation of physical and chemical mutagens for creation of variability in the same species – Case studies.

#### UNIT VII

Use of mutagens in creating oligogenic and polygenic variations – Case studies - *In vitro* mutagenesis – callus and pollen irradiation; Handling of segregating genrations and selection procedures; Validation of mutants; Mutation breeding for various traits (disease resistance, insect resistance, quality improvement,etc) in different crops- Procedures for micromutations breeding/polygenic mutations- Achievements of mutation breeding- varieties released across the world- Problems associated with mutation breeding.

#### UNIT VIII

Use of mutagens in genomics, allele mining, TILLING.

#### Practical

Learning the precautions on handling of mutagens; Dosimetry - Studies of different mutagenic agents: Physical mutagens - Studies of different mutagenic agents: Chemical mutagens - Learning on Radioactivity – Production of source and isotopes at BRIT, Trombay - Learning about gamma chamber; Radiation hazards - Monitoring – safety regulations and safe transportation of radioisotopes - Visit to radio isotope laboratory ; learning on safe disposal of radioisotopes - Hazards due to chemical mutagens - Treating the plant propagules at different doses of physical and chemical mutagens - Learning combined mutagenic treatments; Raising the crop for observation - Mutagenic effectiveness and efficiency; Calculating the same from earlier literature - Study of M1 generation – Parameters to be observed; Study of  $M_2$  generation – Parameters to be observed; Mutation breeding in cereals and pulses – Achievements made and an analysis - Mutation breeding in oilseeds and cotton – Achievements and opportunities - Mutation breeding in forage crops and vegetatively propagated crops;

- Mutation breeding in forage crops and vegetatively propagated crops; Procedure for detection of mutations for polygenic traits in  $M_2$  and  $M_3$  generations.

#### GP 506 POPULATION GENETICS

2+1

## **Objective**

To impart knowledge on structure, properties and their breeding values of different population.

#### **Theory**

#### UNIT I

Population - Properties of population - Mendelian population - Genetic constitution of a population through time, space, age structure etc. Mating systems - Random mating population - Frequencies of genes and genotypes-Causes of change: population size, differences in fertility and viability, migration and mutation.

#### UNIT II

Hardy-Weinberg equilibrium - Hardy-Weinberg law - Proof - Applications of the Hardy-Weinberg law - Test of Hardy-Weinberg equilibrium - Mating frequencies - Non-dominance - Codominance - Snyder's ratio, importance and its effect over random mating in succeeding generations.

#### UNIT III

Multiple alleles - More than one locus - Sex linked genes; Use of gene and genotypic frequencies evaluation in field population level; Interpretations - Changes of gene frequency - Migration - Mutation - Recurrent and non-recurrent - Selection - Balance between selection and mutation - Selection favouring heterozygotes - Overdominance for fitness.

#### UNIT IV

Non random mating: selfing –inbreeding coefficient - panmictic index – sibmating - Assortative mating and disassortative mating - Pedigree populations and close inbreeding - Estimation of selection - Estimation of disequilibrium - Estimation of linkage - Correlation between relatives and estimation of F; Effect of inbreeding and sibbing in cross pollinated crops.

#### UNIT V

Gene substitution and average effects; Breeding value- Genetic drift; Genetic slippage, Co-adapted gene complexes; Homoeostasis- Adapative organization of gene pools, Polymorphism- Balanced and Non-balanced polymorphism, heterozygous advantage- Survival of recessive and deleterious alleles in populations.

#### **Practical**

Genetic exercise on probability; Estimation of gene frequencies; Exercises on factors affecting gene frequencies; Estimation of average affect of gene substitution and breeding value; Exercises on inbreeding and linkage disequilibrium- Cavalli's joint scaling test; Exercises of different mating designs; Estimation of different population parameters from experimental

data; Measurement of genotype-environment interaction; Genetic divergence.

#### GP 507 HETEROSIS BREEDING

2+1

## **Objective**

To provide understanding about mechanisms of heterosis and its exploitation for yield improvement through conventional and biotechnological approaches.

#### **Theory**

#### UNIT I

Historical aspect of heterosis - Nomenclature and definitions of heterosis - Heterosis in natural population and inbred population; Evolutionary aspects - Genetic consequences of selfing and crossing in self-and cross-pollinated and asexually propagated crops crops.

## UNIT II

Pre Mendelian and Post-Mendelian ideas - Genetic theories of heterosis - Physiological, Biochemical and molecular factors underlining heterosis; theories and their estimation; - Evolutionary concepts of heterosis.

#### UNIT III

Prediction of heterosis from various crosses- Inbreeding depression, frequency of inbreeding and residual heterosis in  $F_2$  and segregating populations, importance of inbreeding in exploitation of heterosis — case studies. - Relationship between genetic distance and expression of heterosis — case studies; Divergence and Genetic Distance analyses-morphological and molecular genetic distance in predicting heterosis, Development of heterotic pools in germplasm/genetic stocks and inbreds, their improvement for increasing heterosis.

#### **UNIT IV**

Types of male sterility and use in heterosis breeding; Maintenance, transfer and restoration of different types of male sterility; Use of self-incompatibility in development of hybrids; Hybrid seed production system: 3-line, 2-line and 1-line system; Development of inbreds and parental lines-A, B and R lines – functional male sterility; Commercial exploitation of heterosis- maintenance breeding of parental lines in hybrids.

#### UNIT V

Fixation of heterosis in self, cross and often cross pollinated crops, asexually/clonally propagated crops; Male sterile line creation and diversification in self pollinated, cross pollinated and asexually propagated

crops; problems and prospects; Apomixis in fixing heterosis-concept of single line hybrid.

#### UNIT VI

Organellar heterosis and complementation - Creation of male sterility through genetic engineering and its exploitation in heterosis.

#### **UNIT VII**

Heterosis breeding in wheat, rice, cotton, maize, pearl millet, sorghum and oilseed crops.

#### **Practical**

Selection indices and selection differential – Calculations and interpretations - Male sterile line characterization in millets; Using morphological descriptors; Restorer line identification and diversification of male sterile sources - Male sterile line creation in dicots comprising oilseeds, pulses and cotton; problems in creation of CGMS system; Ways of overcoming them - Male sterile line creation, diversification and restoration in forage crops; Understanding the difficulties in breeding apomicts; Estimation of heterotic parameters in self, cross and asexually propagated crops - Estimation from the various models for heterosis parameters -Hybrid seed production in field crops – an account on the released hybrids; their potential; Problems and ways of overcoming it; hybrid breeding at National and International level; Opportunities ahead.

## GP 508 CELL BIOLOGY AND MOLECULAR GENETICS 2+1

#### **Objective**

To impart knowledge in theory and practice about cell structure, organelles and their functions, molecules like proteins and nucleic acids.

#### **Theory**

#### <u>UNIT I</u>

Ultrastructure of the cell; Differences between eukaryotic and prokaryotic cells, macromolecules; Structure and function of cell wall, nuclear membrane and plasma membrane; Cellular Organelles – nucleus, plastids-chloro/chromoplast, mitochondria endoplasmic reticulum, Golgi complex, lysosomes, peroxisomes.

#### UNIT II

Bioenergetics; Ultrastructure and function of mitochondria and biological membranes; Chloroplast and other photosynthetic organelles; Interphase nucleus- Structure and chemical composition; Cell division and physiology of cell division.

#### UNIT III

Historical background of molecular genetics; Genetic material in organisms; Structure and properties of nucleic acid, DNA transcription and its regulation – Transcription factors and their role; Genetic code, regulation of protein synthesis in prokaryotes and eukaryotes – ribosomes, t-RNAs and translational factors.

#### UNIT IV

Transposable elements; Mechanisms of recombination in prokaryote; DNA organization in eukaryotic chromosomes – DNA content variation, types of DNA sequences – Unique and repetitive sequences; organelle genomes; Gene amplification and its significance; Proteomics and protein-protein interaction; Signal transduction; Genes in development; Cancer and cell aging.

#### **Practical**

Morphological and Gram staining of natural bacteria; Cultivation of bacteria in synthetic medium; Determination of growth rate and doubling time of bacterial cells in culture; Demonstration of bacteriophage by plaque assay method; Determination of soluble protein content in a bacterial culture.

Isolation, purification and raising clonal population of a bacterium; Biological assay of bacteriophage and determination of phage population in lysate; Study of lytic cycle of bacteriophage by one step growth experiment; determination of latent period and burst size of phages per cell; Quantitative estimation of DNA, RNA and protein in an organism; Numericals: problems and assignments.

#### GP 509 BIOTECHNOLOGY FOR CROP IMPROVEMENT 2+1

### **Objective**

To impart knowledge and practical skills to use biotechnological tools in crop improvement.

#### **Theory**

## UNIT I

Biotechnology and its relevance in agriculture; Definitions, terminologies and scope in plant breeding.

#### UNIT II

Tissue culture- History, callus, suspension cultures, cloning; Regeneration; Somatic embryogenesis; Anther culture; somatic hybridization techniques; Meristem, ovary and embryo culture; cryopreservation.

#### UNIT III

Techniques of DNA isolation, quantification and analysis; Genotyping; Sequencing techniques; Vectors, vector preparation and cloning, Biochemical and Molecular markers: morphological, biochemical and DNA-based markers (RFLP, RAPD, AFLP, SSR,SNPs, ESTs etc.), mapping populations ( $F_2$ s, back crosses, RILs, NILs and DH).

#### UNIT IV

Molecular mapping and tagging of agronomically important traits. Statistical tools in marker analysis, Robotics; Marker-assisted selection for qualitative and quantitative traits; QTLs analysis in crop plants, Gene pyramiding.

## UNIT V

Marker assisted selection and molecular breeding; Genomics and genoinformatics for crop improvement; Integrating functional genomics information on agronomically/economically important traits in plant breeding; Marker-assisted backcross breeding for rapid introgression, Generation of EDVs.

#### UNIT VI

Recombinant DNA technology, transgenes, method of transformation, selectable markers and clean transformation techniques, vector-mediated gene transfer, physical methods of gene transfer. Production of transgenic plants in various field crops: cotton, wheat, maize, rice, soybean, oilseeds, sugarcane etc. Commercial releases.

### **UNIT VII**

Biotechnology applications in male sterility/hybrid breeding, molecular farming.

## **UNIT VIII**

MOs and related issues (risk and regulations); GMO; International regulations, biosafety issues of GMOs; Regulatory procedures in major countries including India, ethical, legal and social issues; Intellectual property rights

#### UNIT IX

Bioinformatics & Bioinformatics tools.

#### **IINIT** X

Nanotechnology and its applications in crop improvement programmes.

#### **Practical**

Requirements for plant tissue culture laboratory-Techniques in plant tissue culture - Media components and media preparation -Aseptic manipulation of various explants; observations on the contaminants occurring in media – interpretations - Inoculation of explants; Callus induction and plant regeneration - Plant regeneration; Standardizing the protocols for

regeneration; Hardening of regenerated plants; Establishing a greenhouse and hardening procedures - Visit to commercial micropropagation unit. Transformation using *Agrobacterium* strains, GUS assay in transformed

Transformation using *Agrobacterium* strains, GUS assay in transformed cells / tissues. DNA isolation, DNA purity and quantification tests, gel electrophoresis of proteins and isozymes, PCR-based DNA markers, gel scoring and data analysis for tagging and phylogenetic relationship, construction of genetic linkage maps using computer software.

## GP 510 BREEDING FOR BIOTIC AND ABIOTIC STRESS RESISTANCE 2+1

#### **Objective**

To apprise about various abiotic and biotic stresses influencing crop yield, mechanisms and genetics of resistance and methods to breed stress resistant varieties.

## **Theory**

#### UNIT I

Importance of plant breeding with special reference to biotic and abiotic stress resistance; Classification of biotic stresses – major pests and diseases of economically important crops - Concepts in insect and pathogen resistance; Analysis and inheritance of resistance variation; Host defence responses to pathogen invasions- Biochemical and molecular mechanisms; Acquired and induced immunity and systemic acquired resistance (SAR); Host-pathogen interaction, gene-for-gene hypothesis, molecular evidence for its operation and exceptions; Concept of signal transduction and other host-defense mechanisms against viruses and bacteria.

## UNIT II

Types and genetic mechanisms of resistance to biotic stresses –Horizontal and vertical resistance in crop plants. Quantitative resistance/Adult plant resistance and Slow rusting resistance - Classical and molecular breeding methods - Measuring plant resistance using plant fitness; Behavioural, physiological and insect gain studies.

#### **UNIT III**

Phenotypic screening methods for major pests and diseases; Recording of observations; Correlating the observations using marker data - Gene pyramiding methods and their implications.

#### **UNIT IV**

Classification of abiotic stresses - Stress inducing factors -moisture stress/drought and water logging & submergence; Acidity, salinity/alkalinity/sodicity; High/low temperature, wind, etc. Stress due to soil factors and mineral toxicity; Physiological and Phenological responses; Emphasis of abiotic stresses in developing breeding methodologies.

## UNIT V

Genetics of abiotic stress resistance; Genes and genomics in breeding cultivars suitable to low water regimes and water logging & submergence, high and low/freezing temperatures; Utilizing MAS procedures for identifying resistant types in important crops like rice, sorghum, wheat, cotton etc; Breeding for resistance to stresses caused by toxicity, deficiency and pollutants/contaminants in soil, water and environment.

## UNIT VI

Exploitation of wild relatives as a source of resistance to biotic and abiotic factors in major field crops - Transgenics in management of biotic and abiotic stresses, use of toxins, protease inhibitors, lectins, chitnases and Bt for diseases and insect pest management- Achievements.

#### **Practical**

Phenotypic screening techniques for sucking pests and chewing pests – Traits to be observed at plant and insect level - Phenotypic screening techniques for nematodes and borers; Ways of combating them; Breeding strategies - Weeds – ecological, environmental impacts on the crops; Breeding for herbicide resistance - Evaluating the available populations like RIL, NIL etc. for pest resistance; Use of standard MAS procedures - Phenotypic screening methods for diseases caused by fungi and bacteria; Symptoms and data recording; use of MAS procedures - Screening forage crops for resistance to sewage water and tannery effluents; Quality parameters evaluation - Screening crops for drought and flood resistance; factors to be considered and breeding strategies - Screening varieties of major crops for acidity and alkalinity- their effects and breeding strategies; Understanding the climatological parameters and predisposal of biotic and abiotic stress factors- ways of combating them.

## GP 511 BREEDING CEREALS, FORAGES AND SUGARCANE 2+1

## **Objective**

To provide insight into recent advances in improvement of cereals and forage crops and sugarcane using conventional and modern biotechnological approaches.

#### **Theory**

## UNIT I

Rice: Evolution and distribution of species and forms - wild relatives and germplasm; Genetics - cytogenetics and genome relationship - Breeding objectives- yield, quality characters, biotic and abiotic stress resistance *etc.* - Hybrid rice breeding- potential and outcome - Aerobic rice, its implications and drought resistance breeding.

#### UNIT II

Wheat: Evolution and distribution of species and forms - wild relatives and germplasm; cytogenetics and genome relationship; Breeding objectives-yield, quality characters, biotic and abiotic stress resistance, exploitation of heterosis etc; Sorghum: Evolution and distribution of species and forms - wild relatives and germplasm - cytogenetics and genome relationship - Breeding objectives- yield, quality characters, biotic and abiotic stress resistance etc; Pearl millet: Evolution and distribution of species and forms - wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives- yield, quality characters, biotic and abiotic stress resistance etc.

## UNIT III

Maize: Evolution and distribution of species and forms - wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives: yield, quality characters, biotic and abiotic stress resistance etc - QPM and Bt maize - strategies and implications - Heterosis breeding attempts taken in Sorghum, Pearl Millet and Maize; Minor millets: Evolution and distribution of species and forms - wild relatives and germplasm; Cytogenetics and genome relationship - Minor millets: breeding objectives-yield, quality characters, biotic and abiotic stress resistance etc.

#### UNIT IV

Sugarcane: Evolution and distribution of species and forms - wild relatives and germplasm; Cytogenetics and genome relationship - Breeding objectives- yield, quality characters, biotic and abiotic stress resistance etc - Forage grasses: Evolution and distribution of species and forms - Wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives- yield, quality characters and palatability studies; Biotic and abiotic stress resistance etc., synthetics, composites and apomixes.

#### UNIT V

Forage legumes: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives- yield, quality characters, biotic and abiotic stress resistance etc - Tree fodders: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; Breeding objectives- yield, quality characters, biotic and abiotic stress resistance *etc*, palatability studies.

#### UNIT VI

Distinguishing features of popular released varieties in Rice and Sorghum - Wheat, Pearl millet, Maize and other millets - Sugarcane, forage grasses and legumes and their application to DUS testing - Maintenance of seed purity - Nucleus and Breeder Seed Production.

## **Practical**

Floral biology - emasculation - pollination techniques; Study of range of variation for yield and yield components - Study of segregating populations and their evaluation - Trait based screening for stress resistance in crops of importance- Use of descriptors for cataloguing Germplasm maintenance; learning on the Standard Evaluation System (SES) and descriptors; Use of softwares for database management retrieval.Practical learning on the cultivation of fodder crop species on sewage water; analysing them for yield components and palatability; Laboratory analysis of forage crops for crude protein, digestibility percent and other quality attributes; Visit to animal feed producing factories, learning the practice of value addition; visiting the animal husbandry unit and learning the animal experiments related with palatability and digestibility of fodder.

## GP 512 BREEDING LEGUMES, OILSEEDS AND FIBRE CROPS 2+1

## **Objective**

To provide insight into recent advances in improvement of legumes, oilseeds and fibre crops using conventional and modern biotechnological approaches.

## **Theory**

#### UNIT I

Pigeonpea: Evolution and distribution of species and forms; Wild relatives and germplasm; Genetics, cytogenetics and genome relationship; Morphological and molecular descriptors used for differentiating the accessions; Breeding objectives- yield, quality characters, biotic and abiotic stress *etc* - Hybrid technology; maintenance of male sterile, fertile and restorer lines, progress made at ICRISAT and other Institutes.

#### UNIT II

Chickpea: Evolution and distribution of species and forms - Wild relatives and germplasm - cytogenetics and genome relationship; Breeding objectives- yield, quality characters, biotic and abiotic stress etc; Protein quality improvement; Conventional and modern plant breeding approaches, progress made - Breeding for anti nutritional factors.

#### UNIT III

Other pulses: Greengram, blackgram, fieldpea, lentil,, lathyrus, cowpea, lablab, mothbean: Evolution, cytogenetics and genome relationship; Learning the descriptors; Breeding objectives- yield, quality characters, biotic and abiotic stress etc; Interspecific crosses attempted and its implications, reasons for failure, ways of overcoming them.

### UNIT IV

Groundnut: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; Pod and kernel characters; Breeding objectives- yield, quality characters, biotic and abiotic stress etc.

## UNIT V

Rapeseed and Mustard: Breeding objectives, utilization of wild relatives for yield and quality improvement, biotic and abiotic stress etc; Oil quality – characteristics in different oils; Evolution and distribution of species and forms; Wild relatives and germplasm; Genetics, cytogenetics and genome relationship.

#### UNIT VI

Soybean: Breeding objectives, utilization of wild relatives for yield and quality improvement, biotic and abiotic stress etc. - Oil quality – characteristics; Evolution and distribution of species and forms; Wild relatives and germplasm; Genetics, cytogenetics and genome relationship.

#### **UNIT VII**

Other oilseed crops: Sunflower, sesame, safflower, niger: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; breeding objectives- yield, quality characters, biotic and abiotic stress; Sunflower: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship, hybrid sunflower, constraints and achievements.

## **UNIT VIII**

Castor: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship, breeding objectives-yield, quality characters, biotic and abiotic stress *etc* - Hybrid breeding in castor – opportunities, constraints and achievements.

## UNIT IX

Cotton: Evolution of cotton; Breeding objectives- yield, quality characters, biotic and abiotic stress etc; Development and maintenance of male sterile lines – Hybrid development and seed production – Scenario of Bt cottons, evaluation procedures for Bt cotton. Jute: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; breeding objectives- yield, quality characters, biotic and abiotic stress etc; Mesta and minor fibre crops: Evolution and distribution of species and forms; Wild relatives and germplasm; Cytogenetics and genome relationship; breeding objectives- yield, quality characters, biotic and abiotic stress etc.

#### UNIT X

Distinguishing features of the released varieties in pulses, oilseeds and cotton; Maintenance of seed purity and seed production.

#### **Practical**

Use of descriptors for cataloguing - Floral biology - emasculation pollination techniques; Study of range of variation for yield and yield components - Study of segregating populations in Redgram, Greengram, Blackgram and other pulse crops; Attempting crosses between blackgram and greengram. Use of descriptors for cataloguing - Floral biology, emasculation, pollination techniques of oilseed crops like Sesame, Groundnut, Sunflower and Castor, Cotton: Use of descriptors for cataloguing - Floral biology - Learning on the crosses between different species - Cotton: Study of range of variation for yield and yield components - Study of segregating populations - evaluation - Trait based screening for stress resistance - Cotton fibre quality evaluation conventional and modern approaches; analysing the lint samples of different species, interspecific and interracial derivatives for fibre quality and interpretation –Development and maintenance of male sterile lines Evaluation of cotton cultures of different species for insect and disease resistance - Learning the mechanisms of resistance, quantifying the resistance using various parameters; Evaluating the germplasm of cotton for yield, quality and resistance parameters - learning the procedures on development of Bt cotton - Visit to Cotton Technology Laboratory and Spinning Mills – Learning on cotton yarn production, its quality evaluation and uses.

## **GP 513**

## **BREEDING FOR QUALITY TRAITS**

2+1

### **Objective**

To provide insight into recent advances in improvement of quality traits in rice, millets, legumes, oilseeds and forage crops and for physiological efficiency using conventional and modern biotechnological approaches.

## Theory

#### UNIT I

Developmental biochemistry and genetics of carbohydrates, proteins, fats, vitamins, aminoacids and anti-nutritional factors - Nutritional improvement - A human perspective - Breeding for grain quality parameters in rice and its analysis - Golden rice and aromatic rice - Breeding strategies, achievements and application in Indian context - Molecular basis of quality traits and their manipulation in rice - Post harvest manipulation for quality improvement.

## UNIT II

Breeding for baking qualities in wheat; Characters to be considered and breeding strategies - Molecular and cytogenetic manipulation for quality improvement in wheat - Breeding for quality improvement in barley and oats.

#### UNIT III

Breeding for quality improvement in Sorghum and pearl millet; Quality protein maize – Concept and breeding strategies – Breeding for quality improvement in forage crops - Genetic resource management for sustaining nutritive quality in crops.

#### UNIT IV

Breeding for quality in pulses - Breeding for quality in groundnut, sesame, sunflower and minor oilseeds - Molecular basis of fat formation and manipulation to achieve more PUFA in oil crops; Genetic manipulation for quality improvement in cotton.

#### UNIT V

Genetic engineering protocols for quality improvement – Achievements made - Value addition in crops; Classification and importance - Nutritional genomics and Second generation transgenics.

#### **Practical**

Grain quality evaluation in rice; Correlating ageing and quality improvement in rice - Quality analysis in millets; Estimation of antinutritional factors like tannins in different varieties/hybrids; A comparison - Quality parameters evaluation in wheat; Quality parameters evaluation in pulses - Quality parameters evaluation in oilseeds; Value addition in crop plants; Post harvest processing of major field crops; Quality improvement in crops through tissue culture techniques; Evaluating

the available populations like RIL, NIL etc. for quality improvement using MAS procedures.

## GP 514 GENE REGULATION AND EXPRESSION

2+0

## **Objective**

To provide insight into recent advances in the phenomenon of gene regulation and mechanisms by which plants and microbes express different traits and how these are modified during different stages.

## **Theory**

#### UNIT I

Introduction: Gene regulation-purpose; Process and mechanisms in prokaryotes and eukaryotes; Levels of gene controls.

#### UNIT II

Coordinated genetic regulation-examples- Anthocyanin and gene families and maize; Genetic and molecular basis depending on tissue specificity.

#### UNIT III

Gene expression-Transposons in plant gene expression, cloning-transposon tagging; Light regulated gene expression-model systems in *Arabidopsis* and maize; Paramutations and imprinting of genes and genomes.

### **UNIT IV**

Transgene expression and gene silencing mechanisms; Regulatory geneshorizontal and vertical homology; Transformation-regulatory genes as visible markers; Reporter systems to study gene expression; Combinatorial gene control.

## UNIT V

Eukaryotic transcriptional control; Translational and post-translational regulation; Signal transduction; Stress-induced gene expression; Gene traps and enhancer traps.

# GP 515 MAINTENANCE BREEDING AND CONCEPTS OF 1+1 VARIETY RELEASE AND SEED PRODUCTION

### **Objective**

To apprise the students about the variety deterioration and steps to maintain the purity of varieties & hybrids and principles of seed production in self & cross pollinated crops.

## **Theory**

#### UNIT I

Variety Development and Maintenance; Definition- variety, cultivar, extant variety, essentially derived variety, independently derived variety, reference variety, farmers' variety, hybrid, and population; Variety testing, release and notification systems in India and abroad.

#### UNIT II

DUS testing- DUS Descriptors for major crops; Genetic purity concept and maintenance breeding.

## UNIT III

Factors responsible for genetic deterioration of varieties - safeguards during seed production; Maintenance of varieties in self and cross-pollination crops- isolation distance; Principles of seed production; Methods of nucleus and breeder seed production.

#### UNIT IV

Generation system of seed multiplication -nucleus, breeders, foundation, certified, - Quality seed production technology of self and cross-pollinated crop varieties viz. cereals & millets (wheat, barley, paddy, pearlmillet, sorghum, maize and ragi etc.); Pulses (greengram, blackgram, cowpea, pigeonpea, chickpea, fieldpea, lentil); Oilseeds (groundnut, soybean, sesame, castor, sunflower, safflower, linseed, rapeseed and mustard); fibres (cotton, jute) and forages (guar, forage sorghum, teosinte, oats, berseem, lucerne).; Seed certification procedures; Seed laws and plant variety protection regulations in India and international systems.

#### **Practical**

Identification of suitable areas/locations for seed production; Ear-to-row method and nucleus seed production - Main characteristics of released and notified varieties, hybrids and parental lines; Identification of important weeds/objectionable weeds; Determination of isolation distance and planting ratios in different crops; Seed production techniques of varieties in different crops; Hybrid seed production technology of important crops.

## **Suggested Readings**

# GP 516 GERMPLASM COLLECTION, EXCHANGE 2+1 AND QUARANTINE

## **Objective**

To provide information about collection, germplasm exchange, quarantine, maintenance and use of plant genetic resources including genetically modified plants.

## Theory

## UNIT I

History and importance of germplasm exploration; Distribution and extent of prevalent genetic diversity; Phyto-geographical regions/ecological zones and associated diversity; Mapping eco-geographic distribution of diversity, threatened habitats, use of flora.

#### UNIT II

Concept of population and gene pool; Variations in population and their classification; Gene frequencies in populations, rare and common alleles; Gene pool sampling in self and cross pollinated and vegetatively propagated species; Non-selective, random and selective sampling strategies; Strategies and logistics of plant exploration and collection; Coarse and fine grid surveys; Practical problems in plant exploration; Use of *in vitro* methods in germplasm collection.

#### UNIT III

Ethnobotanical aspects of PGR; Crop botany, farming systems, collecting wild relatives of crop plants; Collection and preservation of specimens; Importance and use of herbaria and preparation of herbarium specimens.

## **UNIT IV**

Post-exploration handling of germplasm collections; Present status and future strategies in collection of major crops of Indian origin such as rice, maize, sorghum, sesame, *Brassica*, okra, eggplant, cotton, mango etc; approaches for collection including indigenous knowledge.

#### UNIT V

History, principles, objectives and importance of plant introduction; Prerequisites, conventions, national and international legislations and policies on germplasm collection and exchange; Documentation and information management; Plant quarantine- introduction, history, principles, objectives and relevance; Regulations and plant quarantine set up in India; Pest risk analysis, pest and pathogen information database; Quarantine in relation to integrated pest management; Economic significance of seed-borne pests (insects, mites, non-insect pests, nematodes, fungi, bacteria, viruses, phytoplasma etc.).

#### UNIT VI

Detection and identification of pests including use of recent techniques like ELISA, PCR etc., Symptoms of pest damage, salvaging techniques for infested/infected germplasm, post-entry quarantine operation, seed treatment and other prophylactic treatments and facilities; Domestic quarantine; seed certification; International linkages in plant quarantine; weaknesses and future thrust.

#### UNIT VII

Genetically modified organisms (GMOs) or genetically engineered plants (GEPs), Concepts of biosafety, risk analysis and consequences of spread of GE crops on the environment; Treaties and multilateral agreements governing trans-boundary movement of GEPs or GMOs, Indian regulatory system for biosafety.

#### **Practical**

Plant exploration and collection; Techniques of coarse and fine grid surveys; Identification of wild relatives of crop plants- Example of collection, cataloguing and preservation of specimens; Sampling techniques of plant materials; Visiting ports, airports to study the quarantine regulations; Techniques for the detection of insects, mites, nematodes, bacteria, weeds, pathogens and viruses on seed and planting materials and salvaging; Use of visual, qualitative, quantitative, microscopic, molecular and plant growth related techniques(controlled green houses/growth chambers, etc); Detection of GMOs and GEPs; Study of post-entry quarantine operation, seed treatment and other prophylactic treatments.

# GP 517 DATA BASE MANAGEMENT, EVALUATION AND 2+1 UTILIZATION OF PGR

## **Objective**

To train the students in germplasm data base management using modern tools and softwares.

#### **Theory**

## UNIT I

Statistical techniques in management of germplasm; Core identification, estimation of sample size during plant explorations, impact of sampling on population structure, sequential sampling for viability estimation; Introduction of binomial, normal and negative cumulative normal, use of Probit scales, viability equations and numograms; Estimation of sample size for storage and viability testing.

#### UNIT II

Germplasm documentation; Basics of computer and operating systems; Database management system, use of statistical softwares, pictorial and graphical representation of data; introduction to communication network.

#### UNIT III

Germplasm management system- global scenario; Genetic variation in crop plants and management of germplasm collection, limitations in use of germplasm collections; necessity of germplasm evaluation; Predictive methods for identification of useful germplasm; Characterization of germplasm and evaluation procedures including specific traits; Gene markers and their use in PGR management.

#### UNIT IV

Management and utilization of germplasm collections; Concept of core collection, molecular markers and their use in characterization; Evaluation and utilization of genetic resources; Pre-breeding/ genetic enhancement, utilizing wild species for crop improvement; Harmonizing agrobiodiversity and agricultural development crop diversification-participatory plant breeding.

## **Practical**

Basics of computer and operating systems; Identification of useful germplasm, evaluation of crop germplasm; Statistical techniques in management of germplasm- estimation of sample size for storage and viability testing; Evaluation procedure and experimental protocols (designs and their analysis), Assessment of genetic diversity; Techniques of Characterization of germplasm; Molecular markers and their use in characterization.

## GP 518 GENETIC CONTROL OF PLANT REPRODUCTION 2+0

## **Theory**

Pollination mechanism and fertilization process and its analysis: Genetics and molecular biology of male and female gametes. Anther and ovule development. Pre- and post-fertilization barriers in wide crosses - principles and techniques to overcome fertility barriers; In vivo and in vitro fertilization mechanisms and its applications for crop improvement; Male sterility - types and mechanisms - methods of inducing male sterility in crop plants. Anther specific genes and their utility in developing male sterility. Pollination mechanisms and their evolution. Gene-flow studies in relation to transgenics. Self-incompatibility - cellular, genetic and molecular basis male genetophytic selection and its application. S gene - structure and function (case studies: tomato, Brassica, tobacco). Somatic hybridization in crop plants. Apomixis - mechanism forms and applications. Limitations, progress and prospects of transfer of apomictic trait to crop plants. Haploid parthenogenesis - induction, detection and uses.

#### **Practical**

Floral features (syndromes) in relation to mode of pollination. *In vitro* pollination. Pollen preservations and viability test. Test for stigma receptivity. Anther, ovule and ovary culture techniques. Pollen germination techniques - in vitro & in vivo study of fertility barrier in wide hybridization and demonstration (wheat, peas, Brassica, cotton). Dissection of different stages of embryo development in monocots and dicots. Embryo rescue technique.

#### GP 519 BREEDING OF VEGETABLE CROPS 2+1

## **Objective**

To educate principles and practices adopted for breeding of vegetable crops.

## **Theory**

Origin, botany, taxonomy, cytogenetics, genetics, breeding objectives, breeding methods (introduction, selection, hybridization, mutation), varieties and varietal characterization, resistance breeding for biotic and abiotic stress, quality improvement, molecular marker, genomics, marker assisted breeding and QTLs,

biotechnology and their use in breeding in vegetable crops-Issue of patenting, PPVFR act.

UNIT I

Potato and tomato

**UNIT II** 

Eggplant, hot pepper, sweet pepper and okra

**UNIT III** 

Peas and beans, amaranth, chenopods and lettuce

**UNIT IV** 

Gourds, melons, pumpkins and squashes

**UNIT V** 

Cabbage, cauliflower, carrot, beetroot, radish, sweet potato and tapioca

#### **Practical**

Selection of desirable plants from breeding population observations and analysis of various qualitative and quantitative traits in germplasm, hybrids and segregating generations; induction of flowering, palanological studies, selfing and crossing techniques in vegetable crops; hybrid seed production of vegetable crops in bulk. screening techniques for insect-pests, disease and environmental stress resistance in above mentioned crops, demonstration of sib-mating and mixed population; molecular marker techniques to identify useful traits in the vegetable crops and special breeding techniques. Visit to breeding blocks.

### GP 601 PLANT GENETIC RESOURCES AND PRE-BREEDING 2+0

## **Objective**

To provide information about collection, evaluation, documentation, maintenance and use of plant genetic resources for crop improvement.

## **Theory**

#### UNIT I

Historical perspectives and need for PGR conservation; Importance of plant genetic resources; Taxonomical classification of cultivated plants; Gene pool: primary, secondary and tertiary; Centres of origin and global pattern of diversity; Basic genetic resources and transgenes.

#### UNIT II

Principles, strategies and practices of exploration, collection, characterization, evaluation and cataloging of PGR; Plant quarantine and phytosanitary certification; Germplasm introduction and exchange; Principles of *in vitro* and cryopreservation.

## UNIT III

Germplasm conservation- *in situ, ex situ*, and on-farm; short, medium and long term conservation strategies for conservation of orthodox seed and vegetatively propagated crops; Registration of plant genetic resources.

### **UNIT IV**

PGR data base management; Multivariate and clustering analysis, descriptors; National and international protocols for PGR management; PGR for food and agriculture (PGRFA); PGR access and benefit sharing; Role of CGIAR system in the germplasm exchange; PBR, Farmers rights and privileges; Seed Act, *sui generis* system; Geographical indicators, Intellectual property; Patents, copyrights, trademarks and trade secrets. <u>UNIT</u> V

Journey from wild to domestication; Genetic enhancement- need for genetic enhancement; Genetic enhancement in pre Mendelian era and 21st century; Genetic enhancement and plant breeding; Reasons for failure in genetic enhancement; Sources of genes/ traits- novel genes for quality. <u>UNIT</u> VI

Distant Hybridization: Inter-specific, inter-generic hybridization, scope and limitations, techniques to overcome the limitations; Gene transfer tools and techniques into cultivated species; Validation of transferred genes and their expression.

#### UNIT VII

Post-genomic tools for genetic enhancement of germplasm; Prebreeding through chromosome manipulation; Application of biotechnology for

Genetic enhancement-Achievements.

## **UNIT VIII**

Utilization of genetic resources, concept of core and mini-core collections, genetic enchancement/Prebreeding for crop improvement including hybrid development.

## **Suggested Readings**

## GP 602 ADVANCED BIOMETRICAL AND QUANTITATIVE GENETICS 2+1

#### **Objective**

To impart theoretical knowledge and computation methods for non allelic interactions, mating designs and component analysis and their significance in plant breeding.

## **Theory**

#### UNIT I

Basic principles of Biometrical Genetics; Selection of parents; Advanced biometrical models for combining ability analysis; Simultaneous selection models; Use of Multiple regression analysis in selection of genotypes; Designs and Systems; Selection of stable genotypes.

#### UNIT II

Models in stability analysis - Pattern analysis - Additive Main Effect and Multiplicative Interaction (AMMI) analysis and other related models; Principal Component Analysis.

#### UNIT III

Additive and multiplicative model - Shifted multiplicative model; Analysis and selection of genotypes; Methods and steps to select the best model - Biplots and mapping genotypes.

## UNIT IV

Genetic architecture of quantitative traits; Conventional analyses to detect gene actions - Partitioning of phenotypic/genotypic variance - Construction of saturated linkage maps, concept of framework map development; QTL mapping- Strategies for QTL mapping - desired populations, statistical methods; Marker Assisted Selection (MAS) - Approaches to apply MAS in

Plant breeding - selection based on markers - simultaneous selection based on marker and phenotype - Factors influencing MAS; Heritability of the trait, proportion of genetic variance, linkage disequilibrium between markers and traits and selection methods.

#### **Practical**

Working out efficiency of selection methods in different populations and interpretation - Biparental mating – use of softwares in analysis and result interpretation - Triallel analysis – use of softwares in analysis and result interpretation - Quadriallel analysis – use of softwares in analysis and result interpretation - Triple Test Cross (TTC) – use of softwares in analysis and result interpretation - Advanced biometrical models for combining ability analysis - Selection of stable genotypes using stability analysis; Models in stability analysis Additive Main Effect and Multiplicative Interaction (AMMI) model - Principal Component Analysis model - Additive and multiplicative model - Shifted multiplicative model - Analysis and selection of genotypes - Methods and steps to select the best model - Selection systems - Biplots and mapping genotypes. Construction of linkage maps and QTL mapping - Strategies for QTL mapping; statistical methods in QTL mapping; Phenotype and Marker linkage studies.

#### GP 603 GENOMICS IN PLANT BREEDING 2+1

#### **Objective**

To impart practical skills in advanced molecular techniques in genome mapping structural/functional genomics and development of transgenic crops.

#### Theory

#### UNIT I

Introduction to the plant genome- Plant nuclear genomes and their molecular description - The chloroplast and the mitochondrial genomes in plants - Genome size and complexity.

#### UNIT II

Establishment of plant genome mapping projects - Genome mapping and use of molecular markers in plant breeding; Strategies for mapping genes of

agronomic traits in plants- Approaches for mapping quantitative trait loci; Map based cloning of plant genes.

#### UNIT III

Regulation of Plant gene expression - Functional genomics - Expression Analysis using Microarrays - Transposon tagging and Insertional mutagenesis- methods and significance- Diversity Array Technology.

## UNIT IV

Genome sequencing in plants–Principles and Techniques; Applications of sequence information in plant genome analyses; Comparative genomics–Genome Comparison Techniques- Classical and advanced approaches. <u>UNIT</u> V

Detection of Single Nucleotide Polymorphism; TILLING and Eco-TILLING; Role of transcriptomics, proteomics and metabolomics in linking genome and phenome; Importance of understanding the phenotypes for exploiting the outcome of genomic technologies- Knock out mutant studies and high throughput phenotyping.

#### UNIT VI

Concept of database development, management and bioinformatics; Plant genome projects and application of bioinformatics tools in structural and functional genomics.

#### **Practical**

Chromosome analysis in major field crops - Fluorescence *in situ* hybridization - Comparative genomic hybridization - Comparative analysis of plant genomes using molecular markers - Genetic map construction using molecular markers - Mapping major genes using molecular markers - QTL mapping in plants - Comparison across mapping populations - Understanding the need genetic algorithms in QTL mapping - Plant Genome Databases - Computational tools to explore plant genome databases - Comparative genomics - Comparison of genome sequences using tools of bioinformatics- Advanced genomic technologies: TILLING and Eco-TILLING - DNA Array Technology - Linking genome sequences to phenotypes: Tools of transcriptomics, proteomics and metabolomics.

# GP 604 MOLECULAR AND CHROMOSOMAL MANIPULATIONS 2+0 FOR CROP BREEDING

## **Objective**

This course focuses on the advanced techniques in analyzing chromosome structure and manipulations for genome analysis in crop species.

## **Theory**

## UNIT I

Organization and structure of genome – Genome size – Organization of organellar genomes – Nuclear DNA organization – Nuclear and Cytoplasmic genome interactions and signal transduction; Transcriptional and Translational changes, Inheritance and expression of organellar DNA; Variation in DNA content – C value paradox; Sequence complexity – Introns and Exons – Repetitive sequences – Role of repetitive sequence.

#### UNIT II

Karyotyping – Chromosome banding and chromosome painting; Tracking introgressions using FISH, GISH, localization and mapping of genes/genomic segments; Distant hybridization - Role of polyploids in crop evolution and breeding - auto and allopolyploids.

#### UNIT III

Applications of cytogenetical methods for crop improvement; Location and mapping of genes on chromosomes: deficiency method; Interchangegenetic consequence, identification of chromosomes involved and gene location; balanced lethal systems, their maintenance and utility; Multiple interchanges-use in producing inbreds, transfer of genes- linked marker methods; Duplication - production and use; Inversions and location of genes; B/A chromosome translocations and gene location.

## UNIT IV

Trisomics- types, production, breeding behavior and location of genes, use of balanced tertiary trisomics in hybrid seed production; Monosomics-methods of production, breeding behavior and location of genes; Intervarietal substitutions-allelic and non-allelic interactions; Telocentric method of mapping.

## UNIT V

Barriers to interspecific and intergeneric hybridization- Behaviour of interspecific and intergeneric crosses; Totipotency of cells – Morphogenesis: *in vivo* and *in vitro* – Meristem culture – anther and pollen culture – ovule, ovary, embryo and endosperm culture – protoplast isolation and culture – protoplast fusion, Different pathways of *in vitro* morphogenesis – organogenesis and somatic embryogenesis; *in vitro* mutant/somaclone selection for biotic and abiotic stresses.

## GP 605 ADVANCES IN PLANT BREEDING SYSTEMS 2+0

## **Objective**

To impart theoretical knowledge and computation methods for non allelic interactions, mating designs and component analysis and their significance in plant breeding.

#### **Theory**

#### UNIT I

Facts about plant breeding before the discovery of Mendelism; Evolutionary concepts of genetics and plant breeding - Flower development and its importance; genes governing the whorls formation and various models proposed; Mating systems and their exploitation in crop breeding; Types of pollination, mechanisms promoting cross pollination.

#### UNIT II

Selection in cross fertilizing crops — Polycross and topcross selections, Mass and recurrent selection methods and their modifications - Mass selection: grided mass selection, ear to row selection, modified ear to row selection; Convergent selection, divergent selection; Recurrent selection: Simple recurrent selection and its modifications (restricted phenotypic selection, selfed progeny selection and full sib recurrent selection) - Recurrent selection for general combining ability (GCA) — Concepts and utilization - Recurrent selection for specific combining ability (SCA) — usefulness in hybrid breeding programmes - Reciprocal recurrent selection (Half sib reciprocal recurrent selection, Half sib reciprocal recurrent selection with inbred tester and Full sib reciprocal recurrent selection); Selection in clonally propagated crops — Assumptions and realities.

## UNIT VI

Genetic engineering technologies to create male sterility; Prospects and problems - Use of self- incompatability and sterility in plant breeding – case studies; - Fertility restoration in male sterile lines and restorer diversification programmes - Conversion of agronomically ideal genotypes into male steriles – Concepts and breeding strategies; Case studies - Generating new cytonuclear interaction system for diversification of male steriles - Stability of male sterile lines – Environmental influence on sterility– Environmentally Induced Genic Male Sterility (EGMS) - Types of EGMS; Influence on their expression, genetic studies; Photo and thermo sensitive genetic male sterility and its use in heterosis breeding - Temperature sensitive genetic male sterility and its use heterosis breeding - Apomixis and its use in heterosis breeding - Incongruity - Factors influencing incongruity - Methods to overcome incongruity mechanisms.

## GP 606 CROP EVOLUTION

2+0

## **Objective**

To impart knowledge on crop evolutionary aspects and manipulation at ploidy level for crop improvement.

## **Theory**

#### UNIT I

Origin and evolution of species; Centres of diversity/origin, diffused centres; Time and place of domestication; Patterns of evolution and domestication-examples and Case studies.

#### IINIT II

Domestication and uniformity – Characteristics of early domestication and changes – Concept of gene pools and crop evolution; Selection and Genetic drift - Consequences.

## **UNIT III**

Speciation and domestication – The process of speciation – Reproductive isolation barriers – Genetic differentiation during speciation – Hybridization - speciation and extinction.

#### **UNIT IV**

Exploitation of natural variation – Early attempts to increase variation – Distant hybridization and introgression- Inter-specific, inter-generic hybridization, scope and limitations, techniques to overcome the limitations; Gene transfer into cultivated species, tools and techniques; Validation of transferred genes and their expression; Controlled introgressions.

## UNIT V

Processes in crop evolution and stabilization of polyploids, cytogenetic and genetic stabilization; Genome organization – Transgenesis in crop

evolution – Multifactorial genome – Intragenomic interaction – Intergenomic interaction – Genome introgression.

#### UNIT VI

Methods to study crop evolution - Contemporary Methods - Based on morphological features - Cytogenetic analysis - Allozyme variations and crop evolution - DNA markers, genome analysis and comparative genomics.

#### **UNIT VII**

Evolutionary significance of polyploidy, Evolution of crop plants through ploidy manipulations; polyploids: methods, use of autopolyploids; haploidy-method of production and use; allopolyploids- synthesis of new crops; - Case studies - Cereals - Pulses - Oilseeds - vegetables, Fibre crops - Plantation crops - Forage crops - Tuber crops - Medicinal Plants.

## GP 607 BREEDING DESIGNER CROPS

2+1

## **Objective**

To impart theoretical knowledge and practical know-how towards physiological efficiency, nutritional enhancement, biofortification and industrial/pharma applications in plant breeding.

## **Theory**

## UNIT I

Breeding of crop ideotypes; Genetic manipulations through recombination breeding, genomics and transgenics for physiological efficiency, nutritional enhancement, special compounds-proteins, vaccines, gums, starch and fats.

## UNIT II

Physiological efficiency as a concept, parametric and whole plant physiology in integrated mode; Physiological mechanism of improvement in nutrient use efficiency, water use efficiency, osmotic adjustment, photosynthetic efficiency, stay green trait and its significance in crop improvement.

#### UNIT III

Improvement in yield potential under sub-optimal conditions by manipulating source and sink, canopyarchitecture, plant-water relationships, effect of suboptimal conditions on cardinal plant growth and development processes, enhancing input use efficiency through genetic manipulations.

## UNIT IV

Breeding for special traits viz. oil, protein, vitamins, amino acids etc.; Concept of biopharming and development of varieties producing targeted compounds, nutraceuticals and industrial products; Success stories in vaccines, modified sugars, gums and starch through biopharming

#### UNIT V

Biosafety management, segregation and isolation requirements in designer crop production and post-harvest management

#### **Practical**

Demonstration of plant responses to stresses through recent techniques; Water use efficiency, transpiration efficiency, screening techniques under stress conditions such as electrolyte leakage, TTC, chlorophyll fluorescence, canopy temperature depression, stomatal conductance, chlorophyll estimation, heat/drought/salt shock proteins.

## **Suggested Readings**

## GP 608 ADVANCES IN BREEDING OF MAJOR FIELD CROPS 3+0

## **Objective**

To provide insight into recent advances in improvement of cereals, millets and non cereal crops using conventional and modern biotechnological approaches.

## Theory

#### UNIT I

History, description, classification, origin and phylogenetic relationship, genome status in cultivated and alien species of major cereals, millets and non cereal crops like Rice, Wheat, Maize, Pearlmillet, Sorghum, Pulses, oilseeds, cotton, sugarcane, arid legumes and other forage crops etc.

#### UNIT II

Breeding objectives in rice, wheat, maize, pearlmillet, sorghum, pulses, oilseeds, cotton, sugarcane, arid legumes and other forage crops etc. Genetic resources and their utilization; Genetics of quantitative and qualitative traits.

#### UNIT III

Breeding for value addition and resistance to abiotic and biotic stresses.

#### UNIT IV

Conventional (line breeding, population improvement, hybrids) and other approaches (DH Populations, Marker Assisted Breeding, Development of new male sterility systems), transgenics.

#### UNIT V

National and International accomplishments in genetic improvement of major field crops and their seed production.

## GP 609 MICROBIAL GENETICS

2+1

## **Objective**

The objective of this course is to apprise the students of molecular processes at DNA and RNA level in different microorganisms, especially bacteria and viruses.

#### **Theory**

#### UNIT I

Nature of bacterial variation; Molecular aspects of mutation; Episomes and plasmids; Gene mapping in bacteria; Life cycle of bacteriophages; Genetic fine analysis of rII locus; Circular genetic map of phage T4; Transposable elements; Gene manipulation; Biochemical genetics of *Neurospora and Sacharomyces*; One gene - one enzyme hypothesis.

## UNIT II

Regulation of gene activity in prokaryotes; Molecular mechanisms of mutation, repair and suppression; Molecular chaperones and gene expression; Genetic basis of apoptosis.

#### UNIT III

Transgenic bacteria and bioethics; genetic basis of nodulation, nitrogen fixation and competition by rhizobia, genetic regulation of nitrogen fixation and quorum sensing in rhizobia; genetics of mitochondria and chloroplasts.

#### **Practical**

Preparation and sterilization of liquid and agar bacterial nutrient media; Assessment of generation time in the log-phage bacterial cultures.

Handling of microorganisms for genetic experiments; Isolation of rhizobia from nodules; Gram staining of rhizobial cells; Examination of polyhydroxy butyrate (PHB) production in rhizobia; Demonstration of  $N_2$ -fixing nodules/bacterial inoculation in the legume- *Rhizobium* symbiotic system.

Induction, isolation and characterization of auxotrophic and drug resistant mutants in bacteria; determination of spontaneous and induced mutation frequencies; Discrete bacterial colony counts for the preparation of survival curves and determination of LD<sub>50</sub> of a mutagen.

Tn-mediated mutagenesis; Analysis and isolation of plasmid DNA; Curing of plasmids.

#### **GP 610**

#### INSITUAND EXSITU CONSERVATION OF GERMPLASM 2+1

## **Objective**

To impart knowledge on the methods of germplasm conservation.

### Theory

## UNIT I

Concept of natural reserves and natural gene banks, *In situ* conservation of wild species in nature reserves: *in situ* conservation components, factors influencing conservation value, national plan for *in situ* conservation; *in situ* conservation of agro-biodiversity on-farm; scientific basis of *in situ* 

conservation on-farm, building on-farm conservation initiatives, implementation of on-farm conservation, management of *in situ* conserved genetic diversity on-farm, enhancing benefits for farmers from local crop diversity.

## UNIT II

Ex situ conservation: components, plant genetic resources conservation in gene banks, national gene banks, gene repositories, preservation of genetic materials under natural conditions, perma-frost conservation, guidelines for sending seeds to network of active/ working collections, orthodox, recalcitrant seeds- differences in handling ,clonal repositories, genetic stability under long term storage condition.

### UNIT III

In vitro storage, maintanence of *in vitro* culture under different conditions, *in vitro* bank maintanence for temporate and tropical fruit crop species, spices, tubers, bulbous crops, medicinal and endangered plant species, conservation of embryos and ovules, cell/suspension cultures, protoplast and callus cultures, pollen culture, micropropagation techniques, problems, prospects of *in vitro* gene bank.

## UNIT IV

Cryopreservation- procedure for handling seeds of orthodox and recalcitrants-cryoprotectants, dessication, rapid freezing, slow freezing, vitrification techniques, encapsulation/dehydration techniques, national facilities, achievements, application of cryopreservation in agriculture, horticulture and forestry crops. Problems and prospects; challenges aheads.

#### **Practical**

In situ conservation of wild species —case studies at national and international levels— ex situ techniques for active and long-term conservation of collections— Preparation and handling of materials, packaging, documentation; design of cold storage modules— Conservation protocols for recalcitrant and orthodox seeds; Cytological studies for assessing genetic stability, in vitro cultures— embryo,cell/suspension cultures, pollen cultures, study of cryotank facility and vitrification techniques, visit to NBPGR/NBAGR—study using fruit crops and other horticultural crops.

## Suggested Broad Areas for Master's and Doctoral Research

- Studies on introgressions, gene transfers, gene identification, location and localization with the application of technologies such as, *in situ* hybridization, chromosome identification like FISH (Fluorescent *In Situ* Hybridization), GISH (Genomic *In Situ* Hybridization), Spectral Karyotyping (SKY) and Multiplex Fluorescence *In Situ* Hybridization (M-FISH) etc.
- Studies on stay-green traits in relation to genes affecting efficiency of photosynthethesis, biotic/abiotic stress tolerance
- Genetics of AGP system for better photosynthesis and translocation
- Identification of genes/QTLs for NUE and WUE
- Molecular markers tagged to genes/QTLs identified for improvement of nutrient use efficiency, water use efficiency
- MAS based mobilization of transgenes for tolerance to biotic and abiotic stresses into desirable agronomic backgrounds
- Breeding methologies to enhance selection efficiency
- Component approaches and development of selection criteria for quantitiative trait improvement
- Stability analyses and methods to estimate the G X E components in breeding materials
- Relative efficiency analyses of genetic component estimation for reliable use in developing selection criteria in crop plants
- Distance and divergence statistics for identification of similarity assessment among genetic stocks and parental genetic material
- Linear and quadratic distance measures to identify relative contribution of component traits for complex traits
- Studies on genetic and molecular bases of stress tolerance to develop molecular diagnostics for screening/identification of stress tolerant genotypes
- Use of an euploids for gene location and source for transfer through wild species

- Development and trisomic and monosomic series in diploids and polyploids
- Dependable marker systems for detection of introgression in wide crosses with minimized linkage drag
- Analysis of Resistance Gene analogues and their use in MAS with enhanced disease resistance
- Analysis of Gene analogues and expression synteny and their use in MAS with enhanced quality and trait expression
- Refinements in embryo rescue and consequent diplodization for production of double haploids
- Use of molecular markers in phylogenetic analysis
- Breeding through distant hybridization route for New Plant Type for breaking yield barriers
- Genetics of durable, quantitative resistance and adult plant resistance in major crops against known pathogens
- Development of tools and methodologies for identification of genes responsible for resistance against polyphagus insects
- OB Development of alien addition lines and telocentric lines in crops
- Microarray technique and robotics for identification of useful genes in crops
- Characterization of germplasm through molecular and serological techniques
- Induction of novel variation through mutagenesis tools and identify novel genes for different traits
- Development of heterotic pools for maximized heterosis in cross and self pollinated crops where hybrid seed production tools are available
- Genetics and traits responsible for terminal and initial heat tolerance in wheat, maize and mustard
- Genetics of cold tolerance related traits in maize, rice and pigeonpea
- Widening the QPM base in maize and prebreeding to add value to the genetic stocks of QPM
- Comparison of relative efficiency of different softwares in analysis of quantitative trait loci and linkages
- GB Biochemical and molecular bases of signal transduction in host-pathogen interactions
- Metal binding proteins for identification of phytoremediators
- Crop improvement for biomass energy and industrial use
- Development of cytogenetic stocks through varietal/alien chromosome substitutions

SST 692	DOCTORAL SEMINAR II	1+0
SST 699	DOCTORAL RESEARCH	45

\*Compulsory for Master's programme; \*\* Compulsory for Ph. D. programme, @ Cross listed with GP 516; @@ Cross listed with GP 609

## SEED SCIENCE AND TECHNOLOGY

## **Course Contents**

## SST 501 FLORAL BIOLOGY, SEED DEVELOPMENT 1+1 AND MATURATION

## **Objective**

To refresh the basic knowledge of seed development and structures and apprise students with its relevance to production of quality seed.

## **Theory**

## UNIT I

Floral types, structure and biology in relation to pollination mechanisms; sporogenesis: microsporogenesis and megasporogenesis; gametogenesis - development of male and female gametes and their structures; effect of environmental factors on floral biology.

#### UNIT II

Fertilization – embryo sac structure, process, barriers to fertilization, incompatibility and male sterility, factors affecting fertilization.

#### UNIT III

Embryogenesis - development of typical monocot and dicot embryos; endosperm development, modification of food storage structures with reference to crop plants; different types of embryos, endosperm and cotyledons; development and their structure in representative crop plants with reference to food storage; external and internal features of monocot and dicot seed; seed coat structure and development in representative crop plants.

#### **UNIT IV**

Apomixis – identification, classification, significance and its utilization in different crops for hybrid seed production; Polyembryony - types and significance; haplontic and diplontic sterility, causes of embryo abortion, embryo rescue and synthetic seeds.

#### **Practical**

Study of floral biology of monocots and dicots; microsporogenesis and megasporogenesis; study of pollen grains - pollen morphology, pollen germination and pollen sterility; types monocot and dicot embryos; external and internal structures of monocot and dicot seeds; seed coat structure, preparation of seed albums and identification.

## **Suggested Readings**

- Bhojwani SS & Bhatnagar SP. 1999. *The Embryology of Angiosperm*. Vikas Publ.
- Black M, Bewley D & Halmer P. 2006. The Encyclopedia of Seeds: Science, Technology and Uses. CABI.
- Chhabra AK. 2006. *Practical Manual of Floral Biology of Crop Plants*. Deptt. of Plant Breeding, CCS HAU, Hisar.
- Copeland LO & McDonald MB. 2001. *Principles of Seed Science and Technology*. 4<sup>th</sup> Ed. Chapman & Hall.
- Frankel R & Galun E. 1977. *Pollination Mechanisms, Reproduction and Plant Breeding*. Springer Verlag.

## **Objective**

To introduce the basic priciples of quality seed production.

## **Theory**

## UNIT I

Introduction: Seed as basic input in agriculture; seed development in cultivated plants; seed quality concept and importance of genetic purity in seed production; types of cultivars, their maintenance and factors responsible for deterioration; seed production in self and cross pollinated crops.

## UNIT II

Mode of pollination and reproduction in crop plants and their modification in relation to hybrid seed production. Principles of hybrid seed production, isolation distance, synchronization of flowering, roguing etc. male sterility and incompatibility system in hybrid seed production, role of pollinators and their management.

## **UNIT III**

Seed multiplication ratios, seed replacement rate, demand and supply; suitable areas of seed production and storage, agronomy of seed production – agro climatic requirements and their influence on quality seed production; generation system of seed multiplication; maintenance of Nucleus seed, production of Breeder, Foundation and Certified seed– criteria involved; life span of a variety and causes for its deterioration; certification standards for self and cross pollinated and vegetatively propagated crops.

## UNIT IV

Hybrid Seed - Methods of development of hybrids; use of male sterility and self-incompatibility and CHA in hybrid seed production; one, two and three line system; maintenance of parental lines of hybrids; planning and management of hybrid seed production technology of major field crops and vegetables.

## UNIT V

Planning of seed production for different classes of seeds for self and cross-pollinated crops, Seed quality control system and organization, seed village concept; Seed production agencies, seed industry and custom seed production in India.

## **Suggested Readings**

McDonald MB Jr & Copeland LO. 1997. *Seed Production: Principles and Practices*. Chapman & Hall.

Musil AF. 1967. *Identification of Crop and Weed Seeds*. Handbook No. 219, USDA, Washington, DC, USA.

Poehlman JM & Sleper DA. 2006. Breeding Field Crops. Blackwell.

Singh BD. 2005. Plant Breeding: Principles and Methods. Kalyani.

Singhal NC. 2003. Hybrid Seed Production in Field Crops. Kalyani.

Thompson JR. 1979. An Introduction to Seed Technology. Leonard Hill.

Tunwar NS & Singh SV. 1985. Handbook of Cultivars. CSCB, GOI.

## **Objective**

To impart a comprehensive knowledge of seed production in field crops with adequate practical training.

## Theory

## UNIT I

Basic principles in seed production and importance of quality seed. Floral structure, breeding and pollination mechanism in self-pollinated cereals and millets viz, wheat, barley, paddy, ragi etc.

#### UNIT II

Floral structure, breeding and pollination mechanism in cross-pollinated cereals and millets viz maize, sorghum, bajra etc; methods and techniques of quality seed production incross-pollinated cereals and millets.

## UNIT III

Floral structure, breeding and pollination mechanism; methods and techniques of seed production in pulses (pigeon pea, chick pea, green garm, black garm, field beans, peas etc.).

#### UNIT IV

Floral structure, breeding and pollination mechanism; methods and techniques of seed production in major oil seeds (groundnut, castor, sunflower, safflower, rape and mustard, linseed, sesame etc.).

### UNIT V

Floral structure, breeding and pollination mechanism; methods and techniques of seed production in commercial fibers (cotton, jute, mesta etc) and vegetatively propagated crops like sugar cane, potato etc.

### **Practical**

Planning of Seed Production, requirements for different classes of seeds in field crops - unit area and rate; Seed production in cross pollinated crops with special reference to land, isolation, planting ratio of male and female lines, synchronization of parental lines and methods to achieve synchrony; supplementary pollination, pollen storage, hand emasculation and pollination in Cotton, detasseling in Corn, identification of rogues and pollen shedders; Pollen collection, storage, viability and stigma receptivity; gametocide application and visits to seed production plots etc.

## **Suggested Readings**

Kelly AF. 1988. Seed Production of Agricultural Crops. John Wiley. McDonald MB Jr & Copeland LO. 1997. Seed Production: Principles and Practices. Chapman & Hall.

Singhal NC. 2003. Hybrid Seed Production in Field Crops. Kalyani.

## SST 504 SEED PRODUCTION IN VEGETABLES 2+1

## **Objective**

To impart a comprehensive knowledge of seed production in vegetable crops with adequate practical training

#### **Theory**

#### UNIT I

Introduction; modes of propagation in vegetables. Seed morphology and development in vegetable seeds. Floral biology of these plant species; classification of vegetable crops based on pollination and reproduction behavior; steps in quality seed production; identification of suitable

areas/locations for seed production of these crops.

#### **UNIT II**

Classification based on growth cycle and pollination behavior; methods of seed production; comparison between different methods e.g. seed-to-seed vs. root-to-seed method in radish; seed multiplication ratios in vegetables; pollination mechanisms; sex types, ratios and expression and modification of flowering pattern in cucurbits; nursery raising and transplanting stage.

#### UNIT III

Seed production technology of vegetables viz. solanaceous, cucurbitaceous, leguminous, malvaceous, cole crops, leafy vegetables, root, tuber and bulb crops and spices; harvesting/picking stage and seed extraction in fruit vegetables; clonal propagation and multiplication in tuber crops e.g. Potato, sweet potato, colocasia, tapioca; seed-plot technique in potato tuber seed production; hybrid seed production technology of vegetable crops, TPS (true potato seed) and its production technique; hybrids in vegetables; maintenance of parental lines; use of male sterility and self incompatibility in hybrid seed production, environmental factors related to flowering/bolting in vegetable crops.

## UNIT IV

Share of vegetable seeds in seed industry; importance and present status of vegetable industry; intellectual property rights and its implications, impact of PVP on growth of seed industry.

#### **Practical**

Selection of suitable areas/locations for high quality seed/planting material production; study of floral biology of vegetables, determination of planting ratios for hybrid seed production vegetables; use and maintenance of monoecious line in hybrid seed production of cucumber; exercises on emasculation and pollination; seed extraction methods and their effect on quality of vegetables; seed production technology of varieties and hybrids in vegetables.

# SST 505 SEED PRODUCTION IN FLOWERS AND MEDICINAL, FRUITS AND PLANTATION CROPS

# 2+1

# **Objective**

To impart comprehensive knowledge of seed production in horticultural crops with adequate practical training

# Theory

#### UNIT I

Introduction: modes of propagation in flower and Meditional crops. classification of medicinal crops based on pollination and reproduction behavior; steps in quality seed production; identification of suitable areas/locations for seed production of these crops.

#### UNIT II

Flowers and Medicinal Plants; classification based on growth cycle, reproduction and pollination behavior; nursery requirement, planning and management; technology for quality seed production in important flower species i.e. marigolds, petunias, dahlia, roses, gladiolus, tulips, chrysanthemum etc; development of hybrids and their seed production technology flower plants.

### UNIT III

IPR issues with special reference to floral and plantation crops.

#### **Practical**

Selection of suitable areas/locations for high quality seed/planting material production; study of floral biology of flowers, fruits, medicinal and plantation crops; determination of planting ratios for hybrid seed production in flowers; exercises on emasculation and pollination; seed extraction methods and their effect on quality of fruit; seed production technology of varieties and hybrids; seed collection and extraction in fruit and plantation crops.

# **Suggested Readings**

Singh SP. 2001. Seed Production of Commercial Vegetables. Agrotech.

Singhal NC. 2003. Hybrid Seed Production in Field Crops. Kalyani.

# **Objective**

To apprise students with the legislative provisions and processes and the mechanisms of seed quality control.

### **Theory**

#### UNIT I

Historical development of Seed Industry in India; Seed quality: concept and factors affecting seed quality during different stages of production, processing and handling; seed quality control- concept and objectives; Central Seed Certification Board (CSCB).

#### UNIT II

Regulatory mechanisms of seed quality control- organizations involved in seed quality control programmes; seed legislation and seed law enforcement as a mechanism of seed quality control; the Seed Act (1966), Seed Rules (1968), Seed (Control) Order 1983; Essential Commodities Act (1955); Plants, Fruits and Seeds Order (1989); National Seed Development Policy (1988) and EXIM Policy regarding seeds, plant materials; New Seed Bill-2004 etc. Introduction, objectives and relevance of plant quarantine, regulations and plant quarantine set up in India.

#### UNIT III

Seed Certification- history, concept and objectives of seed certification; seed certification agency/organization and staff requirement; legal status and phases of seed certification; formulation, revision and publication of seed certification standards; Indian Minimum Seed Certification Standards (I.M.S.C.S.)- general and specific crop standards including GM varieties, field and seed standards; planning and management of seed certification programmes- eligibility of a variety for certification, area assessment, cropping history of the seed field, multiplication system based on limited generation concept, isolation and land requirements etc.

#### UNIT IV

Field Inspection- principles, phases and procedures; reporting and evaluation of observations; pre and post-harvest control tests for genetic purity evaluation (grow-out tests); post harvest inspection and evaluation; seed sampling, testing, labeling, sealing and grant of certificate; types and specifications for tags and labels; maintenance and issuance of certification records and reports; certification fee and other service charges; training and liaison with seed growers. OECD seed certification schemes.

#### UNIT V

Introduction to WTO and IPRs; Plant Variety Protection and its significance; UPOV and its role; DUS testing- principles and applications; essential features of PPV & FR Act, 2001 and related Acts.

#### **Practical**

General procedure of seed certification; identification of weed and other crop seeds as per specific crops; field inspection at different stages of a crop and observations recorded on contaminants and reporting of results; inspection and sampling at harvesting/threshing, processing and after processing for seed law enforcement; testing physical purity, germination and moisture; specifications for tags and labels to be used for certification purpose; grow-out tests for pre and post-harvest quality control; visits to

regulatory seed testing laboratory, including plant quarantine lab and seed certification agency.

Anonymous 1992. *Legislation on Seeds*. NSC Ltd., Department of Agriculture and Cooperation, Ministry of Agriculture, New Delhi.

Nema NP. 1986. Principles of Seed Certification and Testing. Allied Publs.

Tunwar NS & Singh SN. 1988. *Indian Minimum Seed Certification Standards*. CSCB, Ministry of Agriculture, New Delhi.

# SST 507

# SEED PROCESSING AND STORAGE

2+1

# **Objective**

To impart knowledge on the principles and techniques of seed processing for quality upgradation and of storage for maintenance of seed quality.

# **Theory**

# UNIT I

Introduction: Principles of seed processing; methods of seed drying including dehumidification and its impact on seed quality. Relative humidity and equilibrium moisture content of seed; Thumb rules of seed storage; loss of viability in important agricultural and horticultural crops, viability equations and application of nomograph.

# UNIT II

Seed cleaning equipment and their functions: Preparing seed for processing; functions of scalper debearder, scarifier, huller, seed cleaner and grader. Screen cleaners, specific gravity separator, indented cylinder, velvet-spiral-disc separators, colour sorter, delinting machines; seed blending.

#### UNIT III

Assembly line of processing and storage, receiving, elevating and conveying equipments, plant design and layout, requirements and economic feasibility of seed processing plant.

#### UNIT IV

Seed treatments-methods of seed treatment, seed treating formulations and equipments, seed disinfestations, identification of treated seeds; Packaging: principles, practices and materials; bagging and labeling.

# UNIT V

Seed storage: Seed drying and storage; drying methods-importance and factors affecting it, changes during storage, concepts and significance of moisture equilibrium, methods of maintaining safe seed moisture content. Methods to minimize the loss of seed vigour and viability; factors influencing storage losses. Storage methods and godown sanitation. Storage structures. Storage problems of recalcitrant seeds and their conservation.

#### **Practical**

Operation and handling of mechanical drying equipments; effect of drying temperature and duration on seed germination and storability with particular reference to oil seeds; seed extraction methods; seed processing equipments; seed treating equipments; visit to seed processing plant and commercial controlled and uncontrolled Seed Stores; seed quality upgradation; measurement of processing efficiency; seed blending, bag

closures; study of orthodox, intermediary and recalcitrant seeds; evaluating seed viability at different RH and temperature levels and packaging materials; prediction of storability by accelerated ageing controlled deterioration tests.

# SST 508 SEED QUALITY TESTING

2+1

# **Objective**

To provide a comprehensive knowledge on all aspects of seed quality evaluation and their relevance to crop performance.

# **Theory**

#### UNIT I

Introduction: Structure of monocot and dicot seeds; seed quality: objectives, concept and components and their role in seed quality control; instruments, devices and tools used in seed testing. ISTA and its role in seed testing.

#### UNIT II

Seed Sampling: definition, objectives, seed-lot and its size; types of samples; sampling devices; procedure of seed sampling; sampling intensity; methods of preparing composite and submitted samples; sub-sampling techniques, dispatch, receipt and registration of submitted sample in the laboratory, sampling in the seed testing laboratory.

# UNIT III

Physical Purity: definition, objective and procedure, weight of working samples for physical purity analysis; components of purity analysis and their definitions and criteria; pure seed definitions applicable to specific genera and families; multiple seed units; general procedure of purity analysis; calculation and reporting of results, prescribed seed purity standards; determination of huskless seeds; determination of weed seed and other seed by number per kilogram; determination of other distinguishable

varieties (ODV); determination of test weight and application of heterogeneity test.

# UNIT IV

Seed moisture content: importance of moisture content; equilibrium moisture content; principles and methods of moisture estimation - types, instruments and devices used; pre-drying and grinding requirements, procedural steps in moisture estimation; calculation and reporting of

results.

#### UNIT V

Germination: importance; definitions; requirements for germination, instrument and substrata required; principle and methods of seed germination testing; working sample and choice of method; general procedure for each type of method; duration of test; seedling evaluation; calculation and reporting of results; dormancy: definition, importance, causal mechanisms, types and methods for breaking dormancy.

#### UNIT VI

Viability and Vigour Testing: definition and importance of viability tests; different viability tests; quick viability test (TZ- test) - advantages, principle, preparation of seeds and solutions, procedure, evaluation and calculation of test results. Vigour testing: concept, historical development, definitions, principles and procedures of different methods used for testing vigour.

# **UNIT VII**

Genetic purity testing: objective and criteria for genetic purity testing; types of test; laboratory, Growth Chamber and field testing based on seed, seedling and mature plant morphology; principles and procedures of chemical, biochemical and molecular tests.

#### **UNIT VIII**

Seed health Testing: field and seed standards; designated diseases, objectionable weeds - significance of seed borne disease vis-a-vis seed quality - seed health testing and detection methods for seed borne fungi, bacteria, viruses and nematodes.

# UNIT IX

Testing of GM seeds and trait purity, load of detection (LOD).

#### UNIT X

Preparation and dispatch of seed testing reports; storage of guard samples; application and use of seed standards and tolerances.

#### **Practical**

Structure of monocot and dicot seeds of important plant species; identification and handling of instruments used in seed testing laboratory; identification of seeds of weeds and crops; physical purity analysis of samples of different crops; estimation of seed moisture content (oven method); seed dormancy breaking methods requirements for conducting germination test, specifications and proper use of different substrata for germination; seed germination testing in different agri-horticultural crops; seedling evaluation; viability testing by tetrazolium test in different crops; seed and seedling vigour tests applicable in various crops; species & cultivar identification; genetic purity testing by chemical, biochemical and molecular methods; seed health testing for designated diseases, blotter methods, agar method and embryo count methods; testing coated/pelleted seeds.

# **Suggested Readings**

# SST 509 SEED PHYSIOLOGY

1+1

### **Objective**

To provide an insight into physiological processes governing seed quality and its survival.

# **Theory**

#### UNIT I

Physiology of seed development and maturation; chemical composition, synthesis and accumulation of seed reserves, induction of desiccation tolerance, hormonal regulation of seed development.

#### UNIT II

Seed germination; factors affecting germination; role of embryonic axis; growth hormones and enzyme activities, effect of age, size and position of seed on germination. Physiological processes during seed germination; seed respiration, breakdown of stored reserves in seeds, mobilization and interconversion pathways.

Seed dormancy- types, significance, mechanism, endogenous and exogenous factors regulating dormancy, role of phytochrome and PGR, genetic control of dormancy.

#### **UNIT III**

Seed viability and longevity, pre and post-harvest factors affecting seed viability; seed ageing; physiology of seed deterioration; lipid peroxidation and other viability theories; means to prolong seed viability; mechanism of desiccation sensitivity and recalcitrance with respect to seed longevity.

# **UNIT IV**

Seed vigour and its concept, vigour test methods, factors affecting seed vigour, physiological basis of seed vigour in relation to crop performance and yield. Seed invigoration and its physiological and molecular control.

# **Practical**

Proximate analysis of chemical composition of seed; methods of testing viability; kinetics of seed imbibition and solute leakage; seed germination and dormancy breaking methods; seed invigoration and priming treatments; accelerated ageing and controlled deterioration tests; enzymatic activities and respiration during germination and effect of accelerated ageing; vigour testing methods etc.

# SST 510 SEED PATHOLOGY

2+1

### **Objective**

To acquaint the students with principles and practices of seed health testing and management of seed borne diseases.

# **Theory**

#### UNIT I

History and economic importance of seed pathology in seed industry and plant quarantine; terminology, important seed transmitted pathogens; seed microbes and their mode of action, detection techniques and identification of common seed borne pathogens.

#### UNIT II

Morphology and anatomy of typical monocotyledonous and dicotyledonous seeds; mode and mechanism of transmission of seed borne pathogens and microorganisms. Rate of transmission of major plant pathogens, microorganisms in relation to seed certification and tolerance limit; type of losses caused by seed- borne diseases.

#### UNIT III

Role of microorganisms in seed quality deterioration; management of seed-borne plant pathogens/diseases and procedure for healthy seed production; different seed health testing methods for detecting microorganisms; treatments to control seed borne diseases.

#### UNIT IV

Pest Risk Analysis (PRA) and disease free seed production, Sanitary & Phytosaintory (SPS) requirements in seed trade, International regulation (ISHI) in respect of seed health standards.

#### **Practical**

Different methods of examination of seeds to assess seed-borne microorganisms and to quantify infection percentage, detection of seed-borne fungi, bacteria and viruses, identification of storage fungi, control of seed borne diseases, seed treatment methods.

# **Suggested Readings**

Agarwal VK & Sinclair JB. 1997. *Principles of Seed Pathology*. Boca Raton. Karuna V. 2007. *Seed Health Testing*. Kalyani.

# ST 511 SEED ENTOMOLOGY

2+1

# **Objective**

To apprise about the role of insects in seed production and their effect on seed quality during storage.

# **Theory**

UNIT

I

Principles of seed entomology; pollinator insects, insect pests and their classification based on mode of infestation etc.

# UNIT

II

Principles of insect pollination, role of pollinators in seed production. Augmenting quality seed production through honeybee pollination in crucifers and forage legumes. Plant protection measures in bee pollinated crops. Management of pollinators for hybrid seed production.

# UNIT

III

Major insect pests of principal crops and their management practices. Methods of insect pest control. Classes of pesticides, their handling and safe use on seed crops.

# UNIT

IV

Storage insect pests infecting seeds, their development and economic importance. Storage losses due to pests, control of storage pests, Management of storage insects pests, mites and rodents, seed sampling and loss estimation.

# UNIT

V

Principles of fumigation and their use, effect of different fumigants; preservatives and seed protectants on seed quality; Type of storage structures – domestic and commercial.

#### **Practical**

Collection and identification of insect-pollinators, collection and identification of important pests of stored seeds. Detection and estimation of pest infestation vis- a- vis loss of seed quality. Safe handing and use of fumigants and insecticides; safety measures in fumigating and disinfecting, exposure period, aeration etc. the storage structures. Plant protection equipments, their operation and maintenance. Pesticides, its dose determination, preparation of solution and its application.

# **Suggested Readings**

# SST 512 SEED PRODUCTION IN FORAGE, PASTURE AND 2+1 GREEN MANURE CROPS

# **Objective**

To apprise about the basic requirements and methods of quality seed production in forage, pasture and green manure crops.

# **Theory**

#### UNIT I

Important pasture and forage legume crops in India; seed requirement and production; classification of forage, pastures and green manure crops; pollination behavior.

### UNIT II

Factors influencing seed production; maintenance of varietal purity, generation systems of seed multiplication self pollinated crops; seed production in apomictic grasses.

#### UNIT III

Methods and techniques of seed production in important grasses, pastures, legumes and green manure crops; apomictic seed.

#### UNIT IV

Selection of seed production areas, influence of season, seed rate and spacing, sowing methods, direct seed sowing, transplanting, pelleting, fertilizer and manure requirement, isolation distance, weed control, pollination and seed setting, seed shattering, seed maturity and stage of harvest, seed collection, economics of seed production of important fodder crops.

# UNIT V

Seed processing, seed treatment, seed storage, seed viability of these crops.

#### **Practical**

Study of flower structure, seed collection and identification, characteristics of forage, pastures and green manure crops; maturity indices for harvest, seed testing- sampling, purity, moisture, germination and dormancy, seed treatments.

# **Suggested Readings**

Farity DT & Hampton JC. 1997. Forage Seed Production. Vol. I. Temperate species. CABI.

Froma J. 1997. Temperate Forage Legumes. CABI.

Gutterridge RG. 1997. Forage Tree Legumes in Tropical Agriculture. CABI.

*Quality Declared Seed System.* 2007. FAO Plant Production and Protection Publication No.185: FAO, Rome.

# SST 513 SEED STORAGE AND DETERIORATION 1+1

# **Objective**

To provide understanding of the mechanism of seed ageing during storage, factors affecting it and its control.

# **Theory**

# <u>UNIT I</u>

Life span of seeds of plant species; classification of seeds on the basis of storage behaviour; orthodox and recalcitrant seeds; types of storage; kinds of seed storage (open, bulk, controlled, hermetic, germplasm, cryopreservation); soil seed bank; terminology; survival curve of seed.

#### UNIT II

Factors affecting seed storability- biotic and abiotic and pre- and postharvest factors affecting seed longevity; the effects of packaging materials, storage fungi and insects, seed treatment and fumigation and storage environmental conditions on seed storability; moisture equilibrium in seeds; hysteresis effect; thumb rules; selection of suitable areas/places for safe storage; prediction of relative storability and longevity of seed lots, viability equations and nomographs.

#### UNIT III

Concept of seed ageing and deterioration, its causes, symptoms, mechanisms and related theories; different changes associated with the loss of vigour and viability during storage; application of physiological and biochemical techniques for evaluation of seed ageing; genetics of seed viability; effect of seed ageing on crop performance; maintenance of viability and vigour during storage; seed amelioration techniques, mid storage corrections etc.

# UNIT IV

Storage methods- requirement of storage facilities in India; types and storage structures available in the country and their impact on short and long term storage; methods of safe seed storage including eco-friendly techniques used in various group of crops viz. cereals, pulses, oilseeds, fibers, forages and vegetables; operation and management of seed stores; fruit storage; viability loss during transportation and interim storage.

#### **Practical**

To study the effect of storage environmental factors (RH, SMC and temperature) on seed longevity; to study the effect of packaging materials, seed treatment and fumigation on storability; prediction of storability and longevity of seed-lots by using viability equations and nomographs; standardization of accelerated ageing (AA) technique for assessing the seed storability of various crops; estimation of carbohydrates, proteins, fats, enzyme activities, respiration rate and nucleic acids in fresh and aged seeds; use of eco-friendly products and amelioration techniques to enhance quality of stored seeds, visit to seed stores.

# SST 514 SEED MARKETING AND MANAGEMENT 1+1

# **Objective**

To apprise students about the seed supply system, concepts and principles of effective marketing of seed and strengths and weaknesses of the seed sector.

# Theory

#### UNIT I

Importance and promotion of quality seed, formal and informal seed supply systems. Basic concepts of marketing with special reference to seed; importance and scope of seed industry in India, major constraints/problems in seed industry/seed sector role of seed association / federation in seed trade.

# UNIT II

Demand and supply of seed; Role of seed replacement rate (SRR), seed multiplication ratio (SMR), cost of production and returns; determining seed needs; seed pricing and price policy, seed processing and /packaging, demand forecasting.

# UNIT III

Seed marketing intelligence and product mix, sales promotion, distribution channels, marketing costs and margins.

#### UNIT IV

Salient features of national seed policies, role of various sectors/agencies in efficient seed marketing, quality control and assurance programme. Responsibilities of seed companies and dealers under Seed Act, EXIM policies for seed trade etc.

#### **Practical**

Statutory requirements in seed business including R&D, estimation of cost of seed production, marketing costs and margins of seeds of different crops, case studies to compare public & private sectors in different conditions, impact analysis., seed pricing, cost benefit ratio, economic feasibility of seed industry etc.

# **Suggested Readings**

- Kohls RL & Uhl JN. 1980. *Marketing of Agricultural Products*. MacMillan.
- Kundu KK & Suhag KS. 2006. *Teaching Manual on Seed Marketing and Management*. Department of Agricultural Economics CCS HAU Hisar.
- Venugopal P. 2004. *State of Indian Farmers: A Millennium Study*. Vol. VIII. *Input Management*. Academic Foundation, Department of Agriculture and Cooperation, Ministry of Agriculture, New Delhi.

# EMERGING TRENDS IN SEED QUALITY ENHANCEMENT

# **Objective**

To update knowledge on seed quality enhancement technologies and their application.

# **Theory**

#### UNIT I

Concept and significance of seed quality enhancement; physical, chemical and pesticidal seed treatments, history, principles and methods of seed treatment, methodology and factors affecting seed enhancement treatments. UNIT II

Seed priming: physiological and biochemical basis, types of priming technology, biochemical and molecular changes associated, pregermiantion, film coating and pelleting, seed tapes, seed mats, seed colouring, biopriming.

#### UNIT III

Synthetic seeds – Aim and scope for synthetic seeds, historical development, somatic embryogenesis, somaclonal variation and their control, embryo encapsulation systems, hardening of artificial seeds, cryopreservation, storage of artificial seeds, desiccation tolerance, use of botanicals in improving seed quality etc.

#### **Practical**

Seed treatments – methods and techniques, equipments required for seed treatment, film coating; seed invigoration/priming - hydration and dehydration, PEG priming, solid matrix priming, bio priming, effects of priming; methods for hydrogel encapsulation of artificial endosperm, hydrophobic coating etc.; protocols for production of synthetic seeds, Visit to leading Seed Companies to study the seed treatment processes.

# **Suggested Readings**

Kalloo G, Jain SK, Vari AK & Srivastava U. 2006. *Seed: A Global Perspective*. Associated Publishing Company, New Delhi.

# SST516 GERMPLASM COLLECTION, EXCHANGE AND 2+1 QUARANTINE

#### **Objective**

To provide information about collection, germplasm exchange, quarantine, maintenance and use of plant genetic resources including genetically modified plants.

#### Theory

#### UNIT I

History and importance of germplasm exploration; Distribution and extent of prevalent genetic diversity; Phyto-geographical regions/ecological zones and associated diversity; Mapping eco-geographic distribution of diversity,

threatened habitats, use of flora.

# UNIT II

Concept of population and gene pool; Variations in population and their classification; Gene frequencies in populations, rare and common alleles; Gene pool sampling in self and cross pollinated and vegetatively propagated species; Non-selective, random and selective sampling strategies; Strategies and logistics of plant exploration and collection; Coarse and fine grid surveys; Practical problems in plant exploration; Use of *in vitro* methods in germplasm collection.

#### **UNIT III**

Ethnobotanical aspects of PGR; Crop botany, farming systems, collecting wild relatives of crop plants; Collection and preservation of specimens; Importance and use of herbaria and preparation of herbarium specimens.

# **UNIT IV**

Post-exploration handling of germplasm collections; Present status and future strategies in collection of major crops of Indian origin such as rice, maize, sorghum, sesame, *Brassica*, okra, eggplant, cotton, mango etc; approaches for collection including indigenous knowledge.

### UNIT V

History, principles, objectives and importance of plant introduction; Prerequisites, conventions, national and international legislations and policies on germplasm collection and exchange; Documentation and information management; Plant quarantine- introduction, history, principles, objectives and relevance; Regulations and plant quarantine set up in India; Pest risk analysis, pest and pathogen information database; Quarantine in relation to integrated pest management; Economic significance of seed-borne pests (insects, mites, non-insect pests, nematodes, fungi, bacteria, viruses, phytoplasma etc.).

# **UNIT VI**

Detection and identification of pests including use of recent techniques like ELISA, PCR etc., Symptoms of pest damage, salvaging techniques for infested/infected germplasm, post-entry quarantine operation, seed treatment and other prophylactic treatments and facilities; Domestic quarantine; seed certification; International linkages in plant quarantine; weaknesses and future thrust.

# **UNIT VII**

Genetically modified organisms (GMOs) or genetically engineered plants (GEPs), Concepts of biosafety, risk analysis and consequences of spread of GE crops on the environment; Treaties and multilateral agreements governing trans-boundary movement of GEPs or GMOs, Indian regulatory system for biosafety.

#### **Practical**

Plant exploration and collection; Techniques of coarse and fine grid surveys; Identification of wild relatives of crop plants- Example of collection, cataloguing and preservation of specimens; Sampling techniques of plant materials; Visiting ports, airports to study the quarantine regulations; Techniques for the detection of insects, mites, nematodes, bacteria, weeds, pathogens and viruses on seed and planting materials and salvaging; Use of visual, qualitative, quantitative, microscopic, molecular and plant growth related techniques(controlled green houses/growth

chambers, etc); Detection of GMOs and GEPs; Study of post-entry quarantine operation, seed treatment and other prophylactic treatments.

# SST 517 SEED PRODUCTION IN FRUITS AND PLANTATION CROPS 2+1 Objective

To impart comprehensive knowledge of seed production in horticultural crops with adequate practical training

#### **Theory**

# UNIT I

Introduction: modes of propagation in fruits and plantation crops. Floral biology of these plant species; classification of medicinal and horticultural crops based on pollination and reproduction behavior; steps in quality seed production; identification of suitable areas/locations for seed production of these crops.

# UNIT II

Fruits and Plantetion Plants; classification based on growth cycle, reproduction and pollination behavior; nursery requirement, planning and management; technology for quality seed production in important Fruit and Plantation species; development of hybrids and their seed production technology.

# UNIT III

Fruit and Plantation Crops: role of seed in perennial plant species; classification based on reproduction and pollination behavior;

polyembryony and its significance; nursery requirement, planning and management; clonal propagation and multiplication in tropical, sub-tropical and temperate fruits and plantation crops; seed orchards; seed collection, extraction and processing.

# **UNIT IV**

IPR issues with special reference to floral and plantation crops.

#### **Practical**

Selection of suitable areas/locations for high quality seed/planting material production; study of floral biology of fruits and plantation crops; exercises on emasculation and pollination; seed extraction methods and their effect on quality of fruit; seed production technology of varieties and hybrids; seed collection and extraction in fruit and plantation crops.

Singh SP. 2001. Seed Production of Commercial Vegetables. Agrotech. Singhal NC. 2003. Hybrid Seed Production in Field Crops. Kalyani.

#### SST 601 HYBRID SEED PRODUCTION

1+1

# **Objective**

To provide a comprehensive knowledge and practical exposure to hybrid seed production in field crops and vegetables.

# Theory

#### UNIT I

Heterosis: definition, expression and estimation of hybrid vigour; utilization of heterosis in agricultural, horticultural and other crop plants for crop improvement.

#### UNIT II

Pre requisites for hybrid seed production; mechanisms and management of pollination in autogamous and allogamous crops; genetic constitution of varieties, hybrids and basic principles in seed production.

#### **UNIT III**

Techniques of hybrid seed production - emasculation and crossing: use of

self-incompatibility, modification of sex; types of male sterility and exploitation in hybrid development and its use in hybrid seed production; development and maintenance of A, B and R lines.

#### UNIT IV

Fertility restoration; use of chemical hybridizing agents, problems of non synchrony in flowering of parental lines and methods to overcome; planting ratios and population density in relation to hybrid seed yield; salient features of hybrid seed production of various crops viz., rice, sorghum, bajra, maize, sunflower, cotton and other major vegetables.

#### **Practical**

Methods of hybrid seed production in major agricultural and horticultural crops; planting of rows/blocks of parental lines and manipulations for achieving flowering synchrony for production of hybrid seeds, maintenance of A, B and R lines and production of breeder seed; stable diagnostic characteristics of parental lines and their hybrids; genetic purity tests; determination of cost of hybrid seed production of various crops; visit to seed production plots etc.

# **Suggested Readings**

McDonald MB & Copeland LO. 1997. Seed Production: Principles and Practices. Chapman & Hall.

Singhal NC. 2003. Hybrid Seed Production. Kalyani Publishers.

# SST 602 IN SITU AND EXSITU CONSERVATION OF GERMPLASM 2+1

# **Objective**

To impart knowledge on the methods of germplasm conservation.

#### Theory

# UNIT I

Concept of natural reserves and natural gene banks, *In situ* conservation of wild species in nature reserves: *in situ* conservation components, factors influencing conservation value, national plan for *in situ* conservation; *in situ* conservation of agro-biodiversity on-farm; scientific basis of *in situ* conservation on-farm, building on-farm conservation initiatives, implementation of on-farm conservation, management of *in situ* conserved genetic diversity on-farm, enhancing benefits for farmers from local crop diversity.

# UNIT II

Ex situ conservation: components, plant genetic resources conservation in gene banks, national gene banks, gene repositories, preservation of genetic materials under natural conditions, perma-frost conservation, guidelines for sending seeds to network of active/ working collections, orthodox, recalcitrant seeds- differences in handling ,clonal repositories, genetic stability under long term storage condition.

# UNIT III

*In vitro* storage, maintanence of *in vitro* culture under different conditions, *in vitro* bank maintanence for temporate and tropical fruit crop species, spices, tubers, bulbous crops, medicinal and endangered plant species, conservation of embryos and ovules, cell/suspension cultures, protoplast and callus cultures, pollen culture, micropropagation techniques, problems,

prospects of in vitro gene bank.

# **UNIT IV**

Cryopreservation- procedure for handling seeds of orthodox and recalcitrants-cryoprotectants, dessication, rapid freezing, slow freezing, vitrification techniques, encapsulation/dehydration techniques, national facilities, achievements, application of cryopreservation in agriculture, horticulture and forestry crops. Problems and prospects; challenges aheads.

#### **Practical**

In situ conservation of wild species –case studies at national and international levels- ex situ techniques for active and long-term conservation of collections- Preparation and handling of materials, packaging, documentation; design of cold storage modules- Conservation protocols for recalcitrant and orthodox seeds; Cytological studies for assessing genetic stability, in vitro cultures- embryo,cell/suspension cultures, pollen cultures, study of cryotank facility and vitrification techniques, visit to NBPGR/NBAGR -study using fruit crops and other horticultural crops.

# SST 603 TESTING FOR GENUINENESS & PURITY OF CULTIVARS 1+1

# **Objective**

To provide hands-on training on various field and laboratory methods of testing cultivar purity.

# **Theory**

#### UNIT I

Objective of cultivar purity test, general principles and methods involved. Use and limitations of laboratory, green house and field plot methods in determination of genuineness of cultivars; a case study in hybrid cotton, reporting of results and inference.

#### UNIT II

Chemical-biochemical tests for species and cultivar purity: phenol test, seed and seedling tests, electrophoretic analysis of seed protein, isozymes etc, use of chromatography for analysis of secondary compounds etc.

# UNIT III

DNA finger printing (RAPD, SSR, AFLP etc) and their use in varietal purity testing and registration of new varieties.

# **UNIT IV**

Use of computer-based machine vision (MVT) for varietal identification and purity testing.

#### **Practical**

Chemical and biochemical tests for species and cultivar purity: phenol test, seed and seedling tests, electrophoretic analysis of seed protein and isozymes, DNA fingerprinting using PCR techniques, use of chromatography for analysis of secondary compounds.

# **Suggested Readings**

Basra AS. (Ed.). 1995. Seed Quality: Basic Mechanisms and Agricultural Implications. Food Product Press.

ISTA 2006. *Handbook of Variety Testing*. International Seed Testing Association, Switzerland.

# SST 604 DUS TESTING FOR PLANT VARIETY PROTECTION 2+1

# **Objective**

To provide a comprehensive understanding of DUS testing, its conduct and significance to PVP.

### **Theory**

#### UNIT I

Genesis of plant variety protection (PVP); International Union for Protection of New Varieties of Plants (UPOV) and its functions; General agreements on Tariff and Trades (GATT) agreement in relation to protection of plant varieties; Protection of Plant Varieties and Farmers' Rights (PPV &FR) Act, 2001; PPV&FR rules, 2003.

# UNIT II

Criteria for protection of new varieties of plants; principles and procedures of Distinctness, Uniformity and Stability (DUS) testing; test guidelines, planting material, duration, testing options, varieties of common knowledge, reference collection, grouping of varieties, types and categories of characters; technical questionnaire.

# UNIT III

Assessment of DUS characters based on morphological, biochemical and molecular markers; statistical procedures; computer software for use in DUS testing; impact of PVP on growth of seed industry; practical exercise of DUS testing in rice, wheat, pearl- millet, maize, rose and cauliflower.

# **Practical**

Morphological description of plant parts and plant; character expression and states, recording observation and interpretation of data; chemical tests and markers applicable for DUS tests and case study of selected crops.

# **Suggested Readings**

Chakrabarty SK, Prakash S, Sharma SP & Dadlani M. 2007. Testing Of Distinctiveness, Uniformity And Stability For Plant Variety Protection. IARI, New Delhi.

Joshi AK & Singh BD. 2004. Seed Science And Technology. Kalyani.

The Protection Of Plant Varieties And Farmers' Rights Act 2001. Bare Act With Short Notes 2006. Universal Law Publ.

# **Objective**

To provide knowledge on the advances in various aspects of seed science & their application in seed technology.

# **Theory**

#### UNIT I

Physiological and molecular aspects of seed development and control of germination and dormancy; gene expression during seed development; desiccation and stress tolerance and conservation; prediction of seed dormancy and longevity using mathematical models; structural changes in membranes of developing seeds during acquisition of desiccation tolerance; dehydration damage and repair in imbibed seeds, seed biotechnology; genetic analysis and QTL mapping of germination traits; seed ageing and ethylene production; recent accomplishments in seed enhancement research and application of nanotechnology.

# UNIT II

Modern techniques for identification of varieties and hybrids; principles and procedures of electrophoresis, machine vision technique, DNA fingerprinting and other molecular techniques and their utilization; techniques for improving seed quality; proteomic analysis; seed priming, coating, pelleting and synthetic seeds; GM seeds and their detection, terminator technology (GURT).

# UNIT III

Detection and identification of seed borne fungi, bacteria, viruses, nematodes and insect pests through advanced techniques like ELISA, PCR based techniques etc.

# **UNIT IV**

Seed production of self incompatible and apomictic plant species; recent developments in seed laws, policies and seed certification system in India and its comparison with OECD seed certification schemes; IPR systems and PVP internationally.

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

# Physical Sciences

Agricultural Meteorology
Agronomy
Soil Science

Gujarat Agricultural Universities (Anand, Sardarkrushinagar, Navsari, Junagadh) May 2010

# **EXECUTIVE SUMMARY**

# **Agricultural Meteorology**

- 17 courses, 9 of 500 series and 8 of 600 series, in addition to one credit seminar at Master's level and two at Doctoral level recommended
- 4 courses of 500 series recommended as core courses for master's degree
- Course contents revised and new courses added on risk management due to climate change, climate change and livestock management, crop-weather modeling, air pollution, use of GIS tools in climate studies, and instrumentation and analytical tools
- Practical courses added in 600 series courses for more hands-on training of students

# **Agronomy**

- 22 courses, 13 of 500 series and 9 of 600 series, in addition to one credit seminar at Master's level and two at Doctoral level recommended
- 4 courses of 500 series recommended as core courses for master's degree
- The course curriculum includes courses on crop production- cereals, pulses, oil seeds, fodder, weed control, climatology, fertilizer management and irrigation management
- New courses on current trends in Agronomy, organic farming, integrated farming systems, stress crop production, watershed management and crop modeling have been recommended
- Practical added in 600 series

#### **Soil Science**

- 21 courses, 15 of 500 series and 6 of 600 series, in addition to one credit seminar at Master's level and two at Doctoral level recommended
- 5 courses of 500 series recommended as core courses for master's degree
- The contents of regular courses on pedology, soil fertility and chemistry, soil
  physics, soil erosion and conservation, soil biology, use of radioisotopes in soil
  research and instrumentation revised in the light of recent demands of industry and
  society
- New courses on air, soil and water pollution, use of remote sensing and GIS techniques in soil research, land degradation and restoration principles and processes, and watershed management included in the course curriculum
- The present course is designed to educate the students about the basics of soil science, soil processes and their implications in crop production. Contents on various soil degradation processes, their economic and social implications, and their amelioration techniques are the focus of attention. The students shall be exposed to latest technologies in soil studies and prediction models for better managing soils keeping in view the future projections.

\*Compulsory for Master's programme

# **Objective**

To impart theoretical and practical knowledge of physical processes occurring in atmosphere and techniques used in meteorology.

# Theory

#### UNIT I

Solar radiation and laws of radiation; greenhouse effect, albedo, and heat balance of the earth and atmosphere; variation of pressure and temperature with height, potential temperature, pressure gradient, cyclonic and anticyclonic motions; geostropic and gradient winds; equations of motion; general circulation, turbulence, vorticity, atmospheric waves.

# <u>UNIT II</u>

Gas laws, laws of thermodynamics and their application to atmosphere; water vapour in the atmosphere, various humidity parameters and their interrelationships; vapour pressure, psychrometric equation, saturation deficit, stability and instability conditions in the atmosphere.

#### UNIT III

Lapse rates-ascent of dry and moist air, condensation; clouds and their classification; evaporation and rainfall; the hydrological cycle; precipitation processes, artificial rainmaking, thunderstorms and dust storm; haze, mist, fog, and dew; air masses and fronts; tropical and extra-tropical cyclones.

#### UNIT IV

Effect of earth's rotation on zonal distribution of radiation, rainfall, temperature, and wind; the trade winds, equatorial trough and its movement; the SE Asia monsoon.

#### UNIT V

Crop weather charts, calenders and diagrams; weather forecasting importance, types, tools, and modern techniques of weather forecasting; El Nino, la Nino and ENSO.

# UNIT VI

Instruments for measurement of meteorological elements; agromet observatory; measures of central tendency and dispersion, correlation, regression, moving average probability and their distribution function; water budgeting; synoptic, numerical, graphical, spatial analysis of weather systems and charts technique.

# **Practical**

- Agromet observatory- different classes of observatories (A, B, C)
- Site selection and installation procedures for meteorological instruments
- Measurement of weather parameters.
- Reading and recording, calculation of daily, weekly, monthly means.
- Totals of weather data.
- Climatic normals, weather chart preparation and identification of low pressure systems and ridges.
- Statistical technique for computation of normals, moving average, marton chain model etc.

# **Suggested Readings**

Barry RG & Richard JC. 2003. *Atmosphere, Weather and Climate*. Tailor & Fransics Group.

Bishnoi OP. 2007. Principles of Agricultural Meteorology. Oxford Book Co.

Ghadekar SR. 2001. Meteorology. Agromet Publ.

McIlveen R. 1992. Fundamentals of Weather and Climate. Chapman & Hall.

Petterson S. 1958. Introduction to Meteorology. McGraw Hill.

Trewartha Glenn T. 1954. An Introduction to Climate. McGraw Hill.

# AGM 502 FUNDAMENTALS OF AGRICULTURAL METEOROLOGY 2+1 Objective

To impart the theoretical and practical knowledge of physical processes occurring in relation to plant and atmosphere with advanced techniques.

# **Theory**

#### UNIT I

Meaning and scope of agricultural meteorology; components of agricultural meteorology; role and responsibilities of agricultural meteorologists.

# UNIT II

Importance of meteorological parameters in agriculture; efficiency of solar energy conversion into dry matter production; meteorological factors in photosynthesis, respiration and net assimilation; basic principles of water balance in ecosystems; soil-water balance models and water production functions.

#### **UNIT III**

Crop weather calendars; weather forecasts for agriculture at short, medium and long range levels; agromet advisories, preparation, dissemination and economic impact analysis; use of satellite imageries in weather forecasting; synoptic charts and synoptic approach to weather forecasting.

#### UNIT IV

Concept, definition, types of drought and their causes; prediction of drought; crop water stress index, crop stress detection; air pollution and its influence on vegetation.

# UNIT V

Meteorological aspects of forest fires and their control; concepts of mechanistic and deterministic models; general features of dynamical and statistical modeling techniques; weather data and phenology-based approaches to crop modeling; validation and testing of models.

# UNIT VI

Climatic change, green house effect, CO<sub>2</sub> increase, global warming and their impact on agriculture; concept and types of drought; climate classification, agro-climatic zones and agro-ecological regions of India.

# **Practical**

- Preparation of crop weather calendars
- Development of simple regression models for weather, pest and disease relation in different crops.
- Preparation of weather based agro-advisories
- Use of automated weather station (AWS)

#### **Suggested Readings**

Bishnoi OP. 2007. Principles of Agricultural Meteorology. Oxford Book Co.

Kakde JR. 1985. Agricultural Climatology. Metropolitan Book Co.

### AGM 503 MICROMETEOROLOGY

2+1

# **Objective**

To impart the theoretical and practical knowledge of physical processes occurring in lower atmosphere.

# Theory

#### UNIT I

Properties of atmosphere near the earth's surface; exchange of mass momentum and energy between surface and overlaying atmosphere, exchange coefficient, similarity hypothesis, shearing stress, forced and free convection.

# UNIT II

Molecular and eddy transport of heat, water vapour and momentum, frictional effects, eddy diffusion, mixing; temperature instability, air pollution; microclimate near the bare ground, unstable and inversion layers, variation in microclimate under irrigated and rainfed conditions, soil moisture and temperature variation with depth; Richardson number, Raymonds analogy, Exchange coefficients.

#### UNIT III

Micrometeorology of plant canopies; distribution of temperature, humidity, vapour pressure, wind and carbon dioxide; modification of microclimate due to cultural practices, intercropping; radiation distribution and utilization by plant communities, leaf temperature and its biological effects; influence of topography on microclimate; shelter belts and wind breaks, microclimate in low plant area of meadows and grain fields, microclimate within forests, glass house and plastic house climates; instruments and measuring techniques in micrometeorology.

# UNIT IV

Effects of ambient weather conditions on growth, development and yield of crops; measurement of global and diffuse radiation; measurement of albedo over natural surfaces and cropped surfaces; net radiation measurement at different levels; PAR distribution in plant canopies and interception; wind, temperature and humidity profiles in (a) short crops and (b) tall crops; energy balance over crops and LAI and biomass estimation; remote sensing in relation to micrometeorology.

#### Practical

- Micrometerological measurements in crop canopies
- Quantification of crop microclimate
- Determination of ET and its computation by different methods

# AGM 504 AGRO-METEOROLOGICAL MEASUREMENTS AND 1+2 INSTRUMENTATION

### **Objective**

To impart the theoretical and practical knowledge of instruments/equipments used for measurement of agro-meteorological variables.

# **Theory**

#### UNIT I

Fundamentals of measurement techniques; theory and working principles of barometers, thermometers, psychrometers, hair hygrometer, thermohygrograph; exposure and operation of meteorological instruments/equipments in agromet observatories.

#### UNIT II

Radiation and temperature instruments: working principles of albedometer, photometer, spectro-radiometer, sunshine recorder, dew recorder, quantum radiation sensors, pressure bomb apparatus, thermographs, and infra-red thermometer.

#### UNIT III

Precipitation and dew instruments: working principles of rain gauge, self recording rain gauge, Duvdevani dew gauges.

#### UNIT III

Wind instruments: working principles of anemometer, wind vane, anemograph.

# UNIT IV

Evapotranspiration and photosynthesis instruments: working principles of lysimeters, open pan evaporimeters, porometer, photosynthesis system, leaf area meter.

#### UNIT V

Soil thermometers, soil heat flux plates, instruments for measuring soil moisture.

# UNIT VI

Automatic weather station – data logger and sensors, nano-sensors for measurement of weather variables; computation and interpretation of data.

#### **Practical**

- Working with the above instruments in the meteorological observatory taking observations of relevant parameters
- Computation interpretation of the data

#### **Suggested Readings**

# AGM 505 SOIL WATER BALANCE CLIMATOLOGY 2+1

# **Objective**

To impart the theoretical and practical knowledge of ET estimation and measurements.

# **Theory**

#### UNIT I

Basic Laws of radiation; radiation interaction with plant environment; energy balance in atmosphere, crop canopy.

# UNIT II

Atmosphere near the ground; laminar and turbulent flows; wind profile near the ground.

#### UNIT III

Theories of evapotranspiration and their comparison; aerodynamic, eddy correlation, energy balance, water balance and other methods, their application under different agroclimatic conditions; concepts of potential, reference and actual evapotranspiration - modified techniques.

#### UNIT IV

Influence of microclimatic, plant, soil and cultural factors; techniques of lysimetry in measuring actual evapotranspiration.

# UNIT IV

Yield functions; water use efficiency and scheduling of irrigation based on evapotranspiration; water use efficiency and antitranspirants, Kc values and their use, dry matter yield ET functions; radiation instruments; advanced techniques for measurement of radiation and energy balance; computation of  $K_C$  values and their use; estimation of evapotranspiration through satellite imageries – MODIS, TERRA, AQUA, AVHRR, NOVA etc.; modeling for potential ET & reference ET, and ET through remote sensing.

#### **Practical**

- Measurement and evaluation of radiation components
- Computation and comparison of evapotranspiration by different methods - energy balance method, aerodynamic method, Penman method, remote sensing and other methods
- Measurement of wind and temperature profiles near the ground

# **Suggested Readings**

#### AGM 506 CROP WEATHER MODELS

1+2

# **Objective**

To impart the theoretical and practical knowledge of various models for estimation of crop weather responses.

# **Theory**

#### UNIT I

Principles of crop production; evaluation of crop responses to weather elements; impact of natural and induced variability of climate on crop production.

# **UNIT II**

Empirical and statistical crop weather models their application with examples; regression models- incorporating weather, soil, plant and other environmental related parameters and remote sensing inputs; growth and yield prediction models; crop simulation models, e. g. CERES, WOFOST, SPAW, RESCAP, WTGROW etc.; forecasting of pests and diseases; verification, calibration and validation of models.

# **Practical**

 Working with statistical and simulation models, DSSAT models, BRASSICA, RESCAP etc.

#### **Suggested Readings**

- Bishnoi OP. 2007. Principles of Agricultural Meteorology. Oxford Book Co.

# AGM 507 WEATHER MODIFICATION AND RISK MANAGEMENT STRATEGIES 2+0

# **Objective**

To impart the theoretical and practical knowledge of weather modification techniques with risk management strategies.

# **Theory**

# UNIT I

Historical reviews of weather modification, present status of weather modification for agriculture; atmospheric composition and green house effect.

#### UNIT II

Theories of weather modification; scientific advances in clouds and electrical behavior of clouds; hails suppression, dissipation of fog, modification of frost intensity and severe storms; shelter belts and wind breaks, mulches and anti-transpirants; protection of plants against climatic hazards; air and water pollution; meteorological conditions in artificial and controlled climates - green, plastic, glass and animal houses etc.

# **UNIT III**

Risks in agricultural production, history of weather and climate as accepted risk factors in agriculture in the continent/region/country/sub-region concerned and the related documented risk concepts; history and trends of defense strategies towards such risks in the same continent region/country/sub-region; preparedness for weather and climate risks.

#### UNIT IV

Risks of droughts; monitoring, prediction and prevention of drought; drought proofing and management; modern tools inleuidng remote sensing and GIS in monitoring and combating droughts.

#### UNIT VI

Risk characterization - definitions and classification of risks; characterization of weather and climate related risks in agriculture; water related risks; radiation/heat related risks; air and its movement related risks; biomass related risks; social and economic risk factors related to weather and climate.

#### **UNIT VII**

Approaches and tools to deal with risks - history of methods for weather and climate related risk assessments in the continent/region/country/sub-region concerned and their documented evidence of application to agricultural/farming systems; strategies of dealing with risks- mitigating practices before occurrence; preparedness for the inevitable; contingency planning and responses; disaster risk mainstreaming.

#### **UNIT VIII**

Perspectives for farm applications - farm applications not yet dealt with, such as making risk information products more client friendly and transfer of risk information products to primary and secondary users of such information; heterogeneity of rural people in education, income, occupation and information demands and consequences for risk information products and their transfer; livelihood-focused support, participation and community perspectives; challenges for developing coping strategies including transferring risks through insurance schemes.

#### UNIT IX

Challenges to coping strategies - combining challenges to disaster risk mainstreaming, mitigation practices, contingency planning and responses, basic preparedness; preparedness approaches reducing emergency relief necessities; the role that insurances can play in risk spreading and transfer; quantification of risk in agricultural systems associated with weather and

climate; methods for risk assessment and application to agricultural systems of local and regional interest; application of risk management approaches to problems associated with weather and climate problems; application of methods that permit the incorporation of seasonal and long-term forecasts into the risk assessment models.

# AGM 508 PRINCIPLES OF REMOTE SENSING AND ITS APPLICATIONS IN AGRICULTURE 2+1

# **Objective**

To impart the theoretical and practical knowledge of remote sensing principles and their use to estimate of agro-meteorological variables.

#### **Theory**

#### UNIT I

Basic components of remote sensing- signals, sensors and sensing systems; active and passive remote sensing.

#### UNIT II

Characteristics of electromagnetic radiation and its interaction with matter; spectral features of earth's surface features; remote sensors in visible, infrared and microwave regions.

# UNIT III

Imaging and non-imaging systems; framing and scanning systems; resolution of sensors; sensor platforms, their launching and maintenance.

#### **UNIT IV**

Data acquisition system, data preprocessing, storage and dissemination; digital image processing and information extraction.

# UNIT V

Microwave remote sensing; visual and digital image interpretation; introduction to GIS and GPS.

#### UNIT VI

Digital techniques for crop discrimination and identification; crop stress detection - soil moisture assessment, inventory of ground water and satellite

measurement of surface soil moisture and temperature; drought monitoring, monitoring of crop disease and pest infestation.

# **UNIT VII**

Soil resource inventory; land use/land cover mapping and planning; integrated watershed development; crop yield modeling and crop production forecasting.

#### **Practical**

- Acquisition of maps
- Field data collection
- Map and imagery scales
- S/W and H/W requirements and specifications for remote sensing
- Data products, their specifications, media types, data inputs, transformation, display types, image enhancement
- Image classification methods
- Evaluation of classification errors
- Crop discrimination and acreage estimations
- Differentiation of different degraded soils
- Time domain reflectometry
- Use of spectrometer and computation of vegetation indices
- Demonstration of case studies
- · Hands on training

# AGM 509 APPLIED AGRICULTURAL CLIMATOLOGY 1+2

# **Objective**

To impart the theoretical and practical knowledge of computation of different bio-parameters and their applications in the agriculture.

#### **Theory**

#### UNIT I

Climatic statistics: measures of central tendency and variability, skewness, kurtosis, homogeneity, correlation, regression and moving averages; probability analysis using normal, binomial, Markov-chain and incomplete gamma distribution; parametric and non parametric tests; assessment of frequency of disastrous events.

#### UNIT II

Hydrological cycle: precipitation intensity, evaporation, infiltration, runoff, soil storage and hydrological balance.

#### UNIT III

Climatic water budget: potential and actual evapotranspiration and their computation; measurement of precipitation, calculation of water surplus and deficit; computation of daily and monthly water budget and their applications; assessment of dry and wet spells, available soil moisture, moisture adequacy index and their applications.

# **UNIT IV**

Thermal indices and phenology: cardinal temperatures; heat unit and growing degree day concepts for crop phenology, crop growth and development; insect-pest development; crop weather calendars; agroclimatic requirement of crops.

#### UNIT V

Bioclimatic concepts: evaluation of human comfort, comfort indices (temperature, humidity index and wind chill) and clothing insulation; climate, housing and site orientation; climatic normals for animal production.

#### **Practical**

- Use of statistical approaches in data analysis
- Preparation of climatic water budget
- Estimation of agro-meteorological variables using historical records
- Degree day concept and phenology forecasting and preparation of crop calendar
- Evaluation of radiation, wind and shading effects in site selection and orientation
- Study of weather-pest and disease interactions, calculation of continentality factors; calculation of comfort indices and preparation of climograph.

#### **AGM 601**

# CLIMATE CHANGE AND SUSTAINABLE DEVELOPMENT

# **Objective**

To impart the theoretical and practical knowledge of climate change and their sources.

# Theory

#### UNIT I

Climate change and global warming: definitions of terms; causes of climate change and global warming; greenhouse gases, ozone depletion; past records, present trends, extreme weather events and future projections; astronomical predictions: lunar cycle, sunspot cycle, soil-lunar tides, Chandlers compensation, blocking highs.

#### UNIT II

Impacts of climate change on various systems: impacts resulting from projected changes on agriculture and food security; hydrology and water resources; terrestrial and freshwater ecosystems; coastal zones and marine ecosystems; human health; human settlements, energy, and industry; insurance and other financial services; climate change and crop diversification, loss of biodiversity, microbes and pest dynamics; climate change and storage, climate change and weed management.

# UNIT III

Sensitivity, adaptation and vulnerability: system's sensitivity, adaptive capacity and vulnerability to climate change and extreme weather events; regional scenarios of climate change and variability.

# UNIT IV

Mitigation strategies for sustainable development: international policies, protocols, treaties for reduction in greenhouse gases and carbon emissions; carbon sequestration; carbon credit; clean development mechanism (CDM) and land use, land use change and forestry mechanism, alternate energy sources etc.

#### UNIT V

Agricultural food security: reduction in carbon and GHG emission; fuel conservation and reduction in energy use, conservation tillage, biofuels for fossil fuels, reduction in machinery use etc; increasing carbon sinks; resource conservation technologies, mixed rotations of cover and green manure crops, minimization of summer fallow and no ground cover periods etc.

# **Practical**

- Case studies on various climatic projections and consequences thereof in relation to agriculture
- Advance methodology of assessing the impact of climate change on crops

# **Suggested Readings**

# AGM 602 WEATHER FORECASTING

2+1

# **Objective**

To impart theoretical and practical knowledge of forecasting techniques used for weather prediction and preparation of agro-advisories.

# **Theory**

#### UNIT I

Weather forecasting system: definition, scope and importance; types of forecasting: short, medium and long-range; study of synoptic charts with special reference to location of highs and lows, jet streams, synoptic features and weather anomalies and zones of thermal advection and interpretation of satellite pictures of clouds in visible and infra-red range; weather forecasting network.

#### UNIT II

Approaches for weather forecasts: methods of weather forecasts - synoptic, numerical prediction, statistical, analogue, persistence and climatological approach, nano-technological approach, Indigenous Technical Knowledge (ITK) base- signals from flora, fauna, insects, birds, animals behavior; various methods of verification of location-specific weather forecast.

#### UNIT III

Weather based advisories: interpretation of weather forecasts for soil moisture, farm operations, pest and disease development and epidemics, crops and livestock production; preparation of weather-based advisories and dissemination.

#### UNIT IV

Special forecasts: special forecasts for natural calamities such as drought, floods, high winds, cold (frost) and heat waves, hail storms, cyclones and protection measures against such hazards.

#### UNIT V

Modification of weather hazards: weather modification for agriculture; scientific advances in artificial rain making, hail suppression, dissipation of fog and stratus clouds, modification of severe storms and electric behavior of clouds.

#### **Practical**

- Exercise on weather forecasting for various applications
- Preparation of weather-based agro-advisories based on weather forecast using various approaches and synoptic charts.

# AGM 603 AIR POLLUTION METEOROLOGY 2+1

## **Objective**

To impart the theoretical and practical knowledge of air pollutants.

## Theory

## UNIT I

Introduction to air pollution- history, definition: clean air definition; natural versus polluted atmosphere; atmosphere before the industrial revolution.

## UNIT II

Sources of air pollution; classification and properties of air pollutants; emission sources, importance of anthropogenic sources; behaviour and fate of air pollutants; photochemical smog; pollutants and trace gases.

## **UNIT III**

Meteorological factors in the dispersion of air pollutants; topographical, geographical and large scale meteorological factors attached air pollution; meteorological conditions and typical plume forms; air pollution forecasting – Gaussian diffusion models, Numerical dispersion models.

## UNIT IV

Air quality standards; effect of air pollution on biological organisms; ozone layer depletion; air pollution control technologies; management of air pollution; principles of diffusion of particulate matter in the atmosphere; air pollution laws and standards.

## UNIT V

Air pollution sampling and measurement: types of pollutant sampling and measurement, ambient air sampling, collection of gaseous air pollutants, collection of particulate pollutants, stock sampling; analysis of air pollutants - sulfur dioxide, nitrogen dioxide, carbon monoxide, oxidants and ozone, hydrocarbons, particulate matter.

## UNIT VI

Scales of air pollution: local, urban, regional, continental and global.

## **Practical**

- Measurement of different air pollutants
- Measurement of different air pollution gases
- Measurement of visibility
- Measurement of ozone and aerosol optical thickness (AOT)
- To study the temperature profile at different heights
- To study the stability of the atmosphere
- To determine height of partial flume through chimani
- To study the effect of temperature on vegetables, orchards and agricultural crops

## **Suggested Readings**

## AGM 604 WEATHER, CLIMATE AND LIVESTOCK 2+1

## **Objective**

To impart the theoretical and practical knowledge of weather, climate for livestock management.

## Theory

#### UNIT I

Thermal balance in animals; energy exchange processes at the skin of the animals and the need for the maintenance of thermal balance in the animals.

## UNIT II

Effects of weather on animal production, loss of water from the body, growth rate and body weight, reproduction, grazing habit, food intake, milk production, sun burns and photosensitive disorders.

## UNIT III

Meteorological conditions prevailing in glass-house, green house, animal shed, poultry house and grain storage barns; heating, cooling and ventilation of these structures as governed by meteorological factors.

## UNIT IV

Weather and animal diseases and parasites; diseases of poultry and its relation with weather and thermal comfort.

#### UNIT V

Management of livestock to reduce greenhouse gas emission.

#### **Practical**

- Measurement of temperature, humidity, net radiation
- Calculation of animal comfort zone index
- Radiation of animal farm house and body
- Estimation of enegy fluxes on body
- Measurements of CO<sub>2</sub> and methane in animal farm house

# AGM 605 ANALYTICAL TOOLS AND METHODS FOR 2+1 AGRO-METEOROLOGY

## **Objective**

To impart the theoretical and practical knowledge of new tools for analysis of agro-climatic features.

## **Theory**

## UNIT I

Review of agro-climatic methods; characterization of agroclimatic elements; sampling of atmosphere; temporal and spatial considerations; micro-meso-macro climates.

#### UNIT II

Network spacing; spatial and temporal methods; GIS fundamentals and applications; numerical characterization of climatic features; crop response to climate, time lags, time and distance constants, hysteresis effects.

## UNIT III

Influence of climate on stress-response relations; thermal time approach in agroclimatology- heat and radiation use efficiency in crop plants; applications to insect-pest development and prediction; comfort indices for human and animals; impact of natural and induced variability and change of climate on crop production.

## UNIT IV

Instrumentation and sampling problems; design of agro-meteorological experiments.

## UNIT V

Basic knowledge of application of computers in agriculture; theories of computer language BASIC, FORTRAN, C, C++ and Visual basic.

## UNIT VI

Empirical and statistical crop weather models and their application with examples; incorporating weather, soil, plants and other environment-related parameters as subroutine and remote sensing inputs in models; growth and yield prediction models; crop simulation models; forecasting models for insects and diseases.

## **Practical**

- Calculation of continentality factors.
- Climatic indices and climogram.
- Agrometeorological indices: Degree-days, photothermal units, heliothermal units, phenothermal index.
- Heat and radiation use efficiency and other indices of crops.
- Crop growth rates.
- Analysis of thermogram, hygrogram, hyetogram, sunshine cards etc. stream lines and wind roses and statistical analysis of climatic data.
- Working with statistical models: crop yield forecasting, crop weather relationship and insect & disease forecasting models.
- Working with crop simulation models
- Small programme writing in computer languages like BASIC, FORTRAN, C, C++ and Visual basic.

• Geographical Information System.

## **Suggested Readings**

Cooper M. 2006. The Spirit of C. An Introduction to Modern Programming. Jaico Publ.

Malczewski J. 1999. GIS & Multicriteria Decision Analysis. John Wiley & Sons.

# AGM 606 STRATEGIC USE OF CLIMATIC INFORMATION 2+1 Objective

To impart the theoretical and practical knowledge of climatic hazards and their mitigations.

## **Theory**

#### UNIT I

Increasing awareness on potential climate hazards and mitigations: history of climate-related disasters (hazards and vulnerabilities) suffered in the concerned continent/region/country/sub-region and their documented or remembered impacts; hazards and their relation to agricultural production risks (intra- and inter-annual); efforts made in mitigating impacts of (future) disasters (prevention); trends discernable in occurrence and character of disasters, if any.

## UNIT II

Selection of appropriate land use and cropping patterns: types and drivers of agricultural land use and cropping patterns; history of present land use and cropping patterns in the continent/region/country/sub-region concerned as related to environmental issues; successes and difficulties experienced by farmers with present land use and cropping patterns; outlook for present land use and cropping patterns and possible alternatives from an environmental point of view.

#### UNIT III

Recent trends in land use and cropping patterns; adoption of preparedness strategies - priority settings for preparedness strategies in agricultural production; preparedness for meteorological disasters in development planning; permanent adaptation strategies that reduce the vulnerabilities to hazards; preparedness as a coping strategy.

#### UNIT IV

Making more efficient use of agricultural inputs: agro-meteorological aspects of agricultural production inputs and their history; determination of input efficiencies; other factors determining inputs and input efficiency; actual use of inputs in main land use and cropping patterns of the region.

#### UNIT V

Selection of livestock management: history of livestock management patterns in the continent/region/country/sub-region concerned as related to environmental issues; successes and difficulties experienced by farmers with present livestock management strategies; outlook for present livestock management strategies and possible alternatives from an environmental point of view; recent trends in livestock management strategies.

## UNIT VI

Adoption of microclimate modification techniques: review of microclimate management and manipulation methods; history of microclimate modification techniques practised in the continent/country/sub-region concerned; possible improvements in adoption of microclimate modification techniques, given increasing climate variability and climate change; local trends in adoption of such techniques.

## UNIT VII

Protection measures against extreme climate: history of protection measures against extreme climate in the continent/region/country/sub-region concerned; successes and difficulties experienced by farmers with present protection measures; outlook for present protection measures and possible alternatives; trends in protection methods against extreme climate.

#### **Practical**

- Outlook for present land use and cropping patterns and possible alternatives from environmental point of view
- Recent trends in land use and cropping patterns
- Agro-meteorological services to increase farmers design abilities of land use and cropping patterns
- Systematic and standardized data collection on protection measures against extreme climate

## **Suggested Readings**

# AGM 607 MATHEMATICS IN AGRICULTURE AND BIOLOGY 2+1

## **Objective**

To impart the theoretical and practical knowledge of mathematical concept in bioscience.

## **Theory**

## UNIT I

Functions: function of a single real variable; single-valued and many-valued functions; linear functions; power functions; polynomial functions; trigonometric, exponential and logarithmic functions; functions of several real variables.

Differentiation: derivative of the function of a single variable; derivatives of the functions of several variables-partial derivatives; maxima and minima; applications.

## UNIT III

Integration: integrals of functions with respect to their independent variables; indefinite, definite and infinite integrals, applications.

#### UNIT IV

Ordinary differential equations: classification; solution of linear differential equations; applications; partial differential equations - classification, applications.

## UNIT V

Vectors: rules of the game with the vectors; applications; matrices and determinants: characterization; rules of the game with matrices and determinants; systems of linear algebraic equations and their solutions; characteristic roots of matrices; applications.

## UNIT VI

Methods of analysis: averaging and scaling methods, numerical analysis; finite element method, Monte Carlo analysis, spatial variability, stochastic methods, Fourier Analysis, perturbation; iterative and optimal techniques; applications.

## UNIT VII

Probability: probability and probability distributions; applications.

## **Practical**

- Use of simple log and semi-log graph papers
- Use of logarithms and logarithmic tables
- Plotting linear and log graph
- Trigonometric functions and relations
- Data representation as pie, bar and histograms
- Statistical data analysis-averages, standard deviations, simple correlation coefficient

#### AGM 608

## DATABASE MANAGEMENT AND 1+2 COMMERCIALIZATION OF AGROMETEOROLOGICAL DATA IN E-SERVICES

## **Objective**

To impart knowledge on management of agromet data and train the students in commercialization of agrometeorological data through eservices.

## **Theory**

## UNIT I

Data and information; types of data; climate, soil and crop data; Importance of database management; data requirements; data collection and recording (Automatic and manual).

## **UNIT II**

Data structure/format; quality control of data; techniques of climatic data generation; missing data; introduction to different software for database management.

## UNIT III

Processing and analysis of data and data products; value addition of data and data products; data users, public, commercial, academic or research.

## UNIT IV

Availability, accessibility and security of data; evaluating the cost of data; e-management of data.

#### **Practical**

- Types of instruments and data recording
- AWS data retrieval, storage and transfer
- Exposure to different software for Agromet data analysis; exposure to Statistical software
- Temporal and spatial analysis of data; exposure to GIS
- Value addition to data
- Introduction to internet protocols
- Uploading and downloading data, password and security of data
- E-management of data

## **Suggested Readings**

## **AGRONOMY**

## **Course Contents**

## AGRON 501

## MODERN CONCEPTS IN CROP PRODUCTION

(3+0)

## **Objective**

To teach the basic concepts of soil management and crop production.

## **Theory**

UNIT I

Crop growth analysis in relation to environment; agro-ecological zones of India and Gujarat.

UNIT II

Quantitative agro-biological principles and inverse yield nitrogen law; Mitscherlich yield equation, its interpretation and applicability; Baule unit.

**UNIT III** 

Effect of lodging in cereals; physiology of grain yield in cereals; optimization of plant population and planting geometry in relation to different resources, concept of ideal plant type and crop modeling for desired crop yield.

**UNIT IV** 

Scientific principles of crop production; crop response production functions; concept of soil plant relations; yield and environmental stress.

**UNIT V** 

Integrated farming systems, organic farming, and resource conservation technology including modern concept of tillage; dry farming; determining the nutrient needs for yield potentiality of crop plants, concept of balance nutrition and integrated nutrient management; precision agriculture.

## **Suggested Readings**

#### AGRON 502 SOIL FERTILITY AND NUTRIENT MANAGEMENT (2+1)

## **Objective**

To impart knowledge of fertilizers and manures as sources of plant nutrients and apprise about the integrated approach of plant nutrition and sustainability of soil fertility.

## **Theory**

UNIT I

Soil fertility and productivity - factors affecting; features of good soil management; problems of supply and availability of nutrients; relation between

nutrient supply and crop growth; organic farming - basic concepts and definitions.

## **UNIT II**

Criteria of essentiality of nutrients; Essential plant nutrients - their functions, nutrient deficiency symptoms; transformation and dynamics of major plant nutrients.

#### **UNIT III**

Preparation and use of farmyard manure, compost, green manures, vermicompost, biofertilizers and other organic concentrates their composition, availability and crop responses; recycling of organic wastes and residue management.

## **UNIT IV**

Commercial fertilizers; composition, relative fertilizer value and cost; crop response to different nutrients, residual effects and fertilizer use efficiency, fertilizer mixtures and grades; agronomic, chemical and physiological methods of increasing fertilizer use efficiency; nutrient interactions.

#### **UNIT V**

Time and methods of manures and fertilizers application; foliar application and its concept; relative performance of organic and inorganic manures; economics of fertilizer use; integrated nutrient management; use of vermicompost and residue wastes in crops.

#### **Practical**

- Determination of soil pH, ECe, organic C, total N, available N, P, K and S in soils
- Determination of N, P, K and S content in plants.
- Interpretation of interaction effects and computation of economic and yield optima.

## **Suggested Readings**

# AGRON 503 PRINCIPLES AND PRACTICES OF WEED MANAGEMENT (2+1) Objective

To familiarize the students about the weeds, herbicides and methods of weed control.

## **Theory**

#### UNIT I

Weed biology and ecology, crop-weed competition including allelopathy; principles and methods of weed control and classification.

Herbicides introduction and history of their development; classification based on chemical, physiological application and selectivity; mode and mechanism of action of herbicides.

## **UNIT III**

Herbicide structure - activity relationship; factors affecting the efficiency of herbicides; herbicide formulations, herbicide mixtures; herbicide resistance and management; weed control through bio-herbicides, myco-herbicides and allelochemicals; Degradation of herbicides in soil and plants; herbicide resistance in weeds and crops; herbicide rotation.

#### **UNIT IV**

Weed management in major crops and cropping systems; parasitic weeds; weed shifts in cropping systems; aquatic and perennial weed control.

#### UNIT V

Integrated weed management; cost: benefit analysis of weed management.

#### **Practical**

- Identification of important weeds of different crops
- Preparation of a weed herbarium
- Weed survey in crops and cropping systems
- Crop-weed competition studies
- Preparation of spray solutions of herbicides for high and low-volume sprayers
- Use of various types of spray pumps and nozzles and calculation of swath width
- · Economics of weed control
- Calculation of weed indices
- Bioassay of herbicide
- Calculation of herbicidal requirement

## **Suggested Readings**

# AGRON 504 PRINCIPLES AND PRACTICES OF WATER MANAGEMENT (2+1) Objective

To teach the principles of water management and practices to enhance the water productivity.

## **Theory**

#### UNIT I

Water and its role in plants; water resources of India, major irrigation projects, extent of area and crops irrigated in India and different states.

Soil water movement in soil and plants; transpiration; soil-water-plant relationships; water absorption by plants; plant response to water stress, crop plant adaptation to moisture stress condition.

**UNIT III** 

Soil, plant and meteorological factors determining water needs of crops; scheduling, depth and methods of irrigation; microirrigation system; fertigation; management of water in controlled environments and polyhouses. UNIT IV

Water management of the crops and cropping systems; quality of irrigation water and management of saline water for irrigation; water use efficiency.

**UNIT V** 

Excess of soil water and plant growth; water management in problem soils; drainage requirement of crops and methods of field drainage, their layout and spacing.

#### **Practical**

- Measurement of soil water potential by using tensiometer, and pressure plate and membrane apparatus
  - Soil-moisture characteristics curves
  - Water flow measurements using different devices
  - Determination of irrigation requirements
  - Calculation of irrigation efficiency
  - Determination of infiltration rate
  - Determination of saturated/unsaturated hydraulic conductivity

## **Suggested Readings**

# AGRON 505 AGROMETEOROLOGY AND CROP WEATHER FORECASTING (2+1) Objective

To impart knowledge about agro-meteorology and crop weather forecasting to meet the challenges of aberrant weather conditions.

#### Theory

UNIT I

Agro meteorology - aim, scope and development in relation to crop environment; composition of atmosphere, distribution of atmospheric pressure and wind.

Characteristics of solar radiation; energy balance of atmosphere system; radiation distribution in plant canopies, radiation utilization by field crops; photosynthesis and efficiency of radiation utilization by field crops; energy budget of plant canopies; environmental temperature: soil, air and canopy temperature.

#### **UNIT III**

Temperature profile in air, soil, crop canopies; soil and air temperature effects on plant processes; environmental moisture and evaporation: measures of atmospheric temperature and relative humidity vapor pressure and their relationships; evapo-transpiration and meteorological factors determining evapotranspiration.

## **UNIT IV**

Modification of plant environment: artificial rain making, heat transfer, controlling heat load, heat trapping and shading; protection from cold, sensible and latent heat flux, controlling soil moisture; monsoon and their origin, characteristics of monsoon; onset, progress and withdrawal of monsoon; weather hazards, drought monitoring and planning for mitigation.

## UNIT V

Weather forecasting in India – short, medium and long range; aerospace science and weather forecasting; benefits of weather services to agriculture, remote sensing; application in agriculture and its present status in India; atmospheric pollution and its effect on climate and crop production; climate change and its impact on agriculture.

#### **Practical**

- Visit to agro-meteorological observatory and to record sun-shine hours, wind velocity, wind direction, relative humidity, soil and air temperature, evaporation, precipitation and atmospheric pressure
  - Measurement of solar radiation outside and within plant canopy
  - Measurement/estimation of evapo-transpiration by various methods
  - Measurement/estimation of soil water balance
  - Rainfall variability analysis
  - Determination of heat-unit requirement for different crops
  - Measurement of crop canopy temperature
  - Measurement of soil temperatures at different depths
  - Remote sensing and familiarization with agro-advisory service bulletins
- Study of synoptic charts and weather reports, working principle of automatic weather station
  - Visit to solar observatory

# AGRON 506 AGRONOMY OF MAJOR CEREALS AND PULSES (2+1) Objective

To teach the crop husbandry of cereals and pulse crops.

## **Theory**

Origin and history, botanical description, area and production, classification, improved varieties, adaptability, climate, soil, water and cultural requirements, nutrition, quality components, handling and processing of the produce for maximum production of

UNIT I

Rabi cereals: Wheat

**UNIT II** 

Kharif cereals: Rice, Sorghum, Maize and Pearmillet

**UNIT III** 

Rabi pulses: Chickpea, Pea and Indian bean

**UNIT IV** 

*Kharif* pulses: Pigeon pea, Green gram, Black gram, Cowpea and kidney bean.

#### **Practical**

- Phenological observation at different growth stages of crop
- Estimation of crop yield on the basis of yield attributes
- Working out growth indices (LAI, CGR, RGR, NAR, LAD), aggressiveness, relative crowding coefficient, monetary yield advantage and ATER of prominent intercropping systems of different crops
  - Estimation of protein content in pulses
  - Judging of physiological maturity in different crops
  - Determination of cost of cultivation of different crops
  - Working out harvest index of various crops
  - Study of seed production techniques in various crops
- Visit of field experiments on cultural, fertilizer, weed control and water management aspects
  - Visit to nearby villages for identification of constraints in crop production

## **Suggested Readings**

# AGRON 507 AGRONOMY OF OILSEED, FIBRE AND SUGAR CROPS (2+1) Objective

To teach the crop husbandry of oilseed, fiber and sugar crops.

## **Theory**

Origin and history, botanical description, area and production, classification, improved varieties, adaptability, climate, soil, water and cultural requirements, nutrition, quality component, handling and processing of the produce for maximum production of :

UNIT I

Rabi oilseeds - Rapeseed and mustard, linseed, niger and safflower

**UNIT II** 

 $\textit{Kharif}\ oil seeds-Groundnut,\ se same,\ castor,\ sunflower\ and\ soybean$ 

UNIT III
Fiber crops - Cotton, Jute and Sunhemp

**UNIT IV** 

Sugar crops – Sugar-beet and sugarcane.

#### **Practical**

- Phenological observation at different growth stages of crops
- Methods of sowing, tying and propping of sugarcane
- Seed treatment to various crops.
- Working out growth indices (LAI, CGR, RGR, NAR, LAD) aggressivity, relative crowding coefficient, monetary yield advantage and ATER of prominent intercropping systems
- Judging of physiological maturity in different crops and working out harvest index
- Working out cost of cultivation of different crops
- Estimation of crop yield on the basis of yield attributes
- Determination of oil content in oilseeds and computation of oil yield
- Estimation of quality of fibre of different fibre crops
- Study of seed production techniques in various crops
- Visit of field experiments on cultural, fertilizer, weed control and water management aspects
- Visit to nearby villages for identification of constraints in crop production

## **Suggested Readings**

# AGRON 508 AGRONOMY OF MEDICINAL, AROMATIC AND UNDER-UTILIZED CROPS (2+1)

## **Objective**

To acquaint students about different medicinal, aromatic and underutilized field crops, their package of practices and processing.

#### Theory

#### UNIT I

Importance of medicinal and aromatic plants in human health, national economy and related industries, classification of medicinal and aromatic plants according to botanical characteristics and uses.

#### UNIT II

Climate and soil requirements; cultural practices; yield and important constituents of medicinal plants (Isabgol, Rauwolfia, Poppy, *Aloe vera*, Satavar, Stevia, Safed Musli, Kalmegh, Asaphoetida, *Nux vomica*, Rosadle, Senna, Guggal, Aswagandha, Shankhpuspi, Cress and Dodi).

#### UNIT III

Climate and soil requirements; cultural practices; yield and important constituents of aromatic plants (Citronella, Palmarosa, Mentha, Basil, Lemon grass, Rose, Patchouli, Geranium and Khush grass).

## **UNIT IV**

Climate and soil requirements; cultural practices; yield of under-utilized crops (Rice bean, Lathyrus, Sesbania, French bean, Fenugreek, Grain Amaranth, Karingdo and Tobacco).

#### **Practical**

- Identification of crops based on morphological and seed characteristics
- Quality characters in medicinal and aromatic plants
- Methods of analysis of essential oil and other chemicals of importance in medicinal and aromatic plants

## **Suggested Readings**

# AGRON 509 AGRONOMY OF FODDER AND FORAGE CROPS (2+1) Objective

To teach the crop husbandry of different forage and fodder crops along with their processing.

## **Theory**

UNIT I

Adaptation, distribution, varietal improvement, agro-techniques and quality aspects including anti-quality factors of important fodder crops like maize, sorghum, *bajra*, *guar*, cowpea, oats, berseem, *chicory*, Rajka bajri, lucerne and sunflower

**UNIT II** 

Adaptation, distribution, varietal improvement, agro-techniques and quality aspects including anti-quality factors of important forage crops/grasses like, napier grass, *Panicum, Cenchrus and* marvel grass.

**UNIT III** 

Year-round fodder production and management, preservation and utilization of forage and pasture crops.

UNIT IV

Principles and methods of hay and silage making; chemical and biochemical changes, nutrient losses and factors affecting quality of hay and silage; use of physical and chemical enrichments and biological methods for improving nutrition; value addition of poor quality fodder.

**UNIT V** 

Grazing and grassland management

**UNIT VI** 

Economics of forage crops and seed production techniques.

## **Practical**

- Practical training of farm operations in raising fodder crops;
- Canopy measurement, yield and quality estimation, viz. dry matter, crude protein, crude fibre, NDF, ADF and cellulose of various fodder and forage crops
  - Anti-quality components like HCN in sorghum and such factors in other crops
  - Hay and silage making and economics of their preparation

## **Suggested Readings**

## AGRON 510 AGROSTOLOGY AND AGRO-FORESTRY

(2+1)

## **Objective**

To teach crop husbandry of different forage, fodder and agro forestry crops/trees along with their processing.

## **Theory**

#### UNIT I

Agrostology: definition and importance; principles of grassland ecology: grassland ecology, community, climax, dominant species, succession, biotype, ecological status of grasslands in India, grass cover of India; problems and management of grasslands.

## **UNIT II**

Importance, classification, scope, status and research needs of pastures; pasture establishment, their improvement and renovation-natural pastures, cultivated pastures; common pasture grasses.

## **UNIT III**

Agroforestry: definition and importance; agroforestory systems, agrisilviculture, silvipasture, agrisilvipasture, agrihorticulture, aquasilviculture, alley cropping and energy plantation.

## **UNIT IV**

Crop production technology in agro-forestry and agrostology system; silvipastoral system: meaning and importance for wasteland development; selection of species, planting methods and problems of seed germination in agro-forestry systems; irrigation and manuring in agro-forestry systems, associative influence in relation to above ground and underground interferences; lopping and coppicing in agro-forestry systems; social acceptability and economic viability, nutritive value of trees; tender operation; desirable tree characteristics.

#### **Practical**

• Identification of seeds and plants of common grasses, legumes and trees of economic

importance with reference to agro-forestry

- Seed treatment for better germination
- Methods of propagation/planting of grasses and trees in silvipastoral system
- Fertilizer application in strip and silvipastroal systems
- After-care of plantation
- Estimation of protein content in loppings of important fodder trees
- Estimation of calorie value of wood of important fuel trees
- Estimation of total biomass and fuel wood
- Economics of agro-forestry
- Visit to important agro-forestry/grass land research stations

## **Suggested Readings**

# AGRON 511 CROPPING SYSTEMS AND SUSTAINABLE AGRICULTURE (2+0) Objective

To acquaint the students about prevailing cropping systems in the country and practices to improve their productivity.

## **Theory**

#### UNIT I

Cropping systems: definition, indices and its importance; physical resources, soil and water management in cropping systems; assessment of land use.

## **UNIT II**

Concept of sustainability in cropping systems and farming systems, scope and objectives; production potential under monoculture cropping, multiple cropping, alley cropping, sequential cropping and intercropping, mechanism of yield advantage in intercropping systems.

#### **UNIT III**

Above and below ground interactions and allelopathic effects; competition relations; multi-storied cropping and yield stability in intercropping, role of non-monetary inputs and low cost technologies; research need on sustainable agriculture.

## **UNIT IV**

Crop diversification for sustainability; role of organic matter in maintenance of soil fertility; crop residue management; fertilizer use efficiency and concept of fertilizer use in intensive cropping system.

#### **UNIT V**

Plant ideotypes for drylands; plant growth regulators and their role in sustainability.

## **Suggested Readings**

Palaniappan SP & Sivaraman K. 1996. Cropping Systems in the Tropics; Principles and Management. New Age.

# AGRON 512 DRYLAND AGRICULTURE AND WATERSHED MANAGEMENT (2+1) Objective

To teach the basic concepts and practices of dry land farming and soil moisture conservation.

## **Theory**

UNIT I

Definition, concept and characteristics of dry land agriculture; significance and dimensions of dry land agriculture in India.

**UNIT II** 

Soil and climatic parameters with special emphasis on rainfall characteristics; constraints limiting crop production in dry land areas; types of drought, characterization of environment for water availability; crop planning for erratic and aberrant weather conditions.

**UNIT III** 

Stress physiology and resistance to drought, adaptation of crop plants to drought, drought management strategies; preparation of appropriate crop plans for dry land areas; mid contingent plan for aberrant weather conditions.

**UNIT IV** 

Tillage, tilth, frequency and depth of cultivation, compaction in soil tillage; concept of conservation tillage; tillage in relation to weed control and moisture conservation; techniques and practices of soil moisture conservation (use of mulches, kinds, effectiveness and economics); antitranspirants; soil and crop management techniques, seeding and efficient fertilizer use.

UNIT V

Concept of watershed resource management, objectives, problems, approach and components.

## **Practical**

- Seed treatment, seed germination and crop establishment in relation to soil moisture contents
  - Estimation of moisture index and aridity index
  - Spray of anti-transpirants and their effect on crops
  - Collection and interpretation of data for water balance equations
  - Water use efficiency
  - Visit to dryland research stations and watershed projects

# AGRON 513 PRINCIPLES AND PRACTICES OF ORGANIC FARMING (2+1) Objective

To study the principles and practices of organic farming for sustainable crop production.

## **Theory**

#### UNIT I

Organic farming - concept and definition, its relevance to India and global agriculture and future prospects; land and water management - land use, minimum tillage; shelter zones, hedges, pasture management, agro-forestry.

#### **UNIT II**

Organic farming and water use efficiency; soil fertility, nutrient recycling, organic residues, organic manures, composting, soil biota and decomposition of organic residues, earthworms and vermicompost, green manures, biofertilizers, biodynamic and integrated bio nutrient management.

#### UNIT III

Farming systems, crop rotations, multiple and relay cropping systems, intercropping in relation to maintenance of soil productivity.

## **UNIT IV**

Control of weeds, diseases and insect pest management, biological agents and pheromones, biopesticides.

## UNIT V

Socio-economic impacts; marketing and export potential: inspection, certification, labeling and accreditation procedures.

## **Practical**

- Aerobic and anaerobic methods of making compost
- Making of vermicompost and vermiwash
- Identification and nursery raising of important agro-forestry tress and tress for shelter belts
- Efficient use of biofertilizers, technique of treating legume seeds with *Rhizobium* cultures, use of *Azotobacter*, *Azospirillum*, and PSB cultures in field Visit to an organic farm
- Quality standards, inspection, certification and labeling and accreditation procedures for farm produce from organic farms

# AGRON 601 CURRENT TRENDS IN AGRONOMY (3+0) Objective

To acquaint the students about recent advances in agricultural production.

## **Theory**

UNIT I

Agro-physiological basis of variation in yield, recent advances in soil plant-water relationship.

**UNIT II** 

Globalization of agriculture and WTO, precision agriculture, contract farming, organic farming, marketing and export potential of organic products, certification, labeling and accreditation procedures.

**UNIT III** 

Crop residue management in multiple cropping systems; latest developments in plant management, weed management, cropping systems, grassland management, agro-forestry, allelopathy.

**UNIT IV** 

GIS, GPS and remote sensing for crop management, global warming, GM crops, seed production technology; seed certification, seed multiplication and hybrid seed production

UNIT V

Concepts of system agriculture; holistic approach of farming systems, dry land agriculture, sustainable agriculture and research methodology in Agronomy.

UNIT VI

LEISA (low external input sustainable agriculture) and HEISA (high external input sustainable agriculture)

## AGRON 602 CROP ECOLOGY (2+0)

## **Objective**

To acquaint the students about the agricultural systems, agro-ecological regions, and adaptation of crops to different agro-climatic conditions.

## **Theory**

#### UNIT I

Concept of crop ecology, agricultural systems, ecology of cropping systems, principles of plant distribution and adaptation, crop and world food supply.

UNIT II

Ecosystem characteristics, types and functions, terrestrial ecology, flow of energy in ecosystem, ecosystem productivity, biomass, succession and climax concept.

**UNIT III** 

Physiological response of crop plants to light, temperature, CO<sub>2</sub>, moisture and solar radiation; influence of climate on photosynthesis and productivity of crops; effect of global climate change on crop production.

**UNIT IV** 

Exploitation of solar energy in crops; vertical distribution of temperature; efficiency in crop production.

UNIT V

Competition in crop plants; environmental pollution, ecological basis of environmental management and environment manipulation through agronomic practices; improvement of unproductive lands through crop selection and management.

## **Suggested Readings**

# AGRON 603 CROP PRODUCTION AND SYSTEM MODELING (2+1) Objective

To familiarize the students about systems approach and to simulate yields and growth of several crops under varied soil and weather conditions with different management practices and their optimization.

## **Theory**

UNIT I

Systems classification; flow charts, modeling techniques and methods of integration, feedbacks and relational diagrams.

**UNIT II** 

Elementary models for crop growth based on basic methods of classical growth analysis.

**UNIT III** 

Crop modeling methods for crop-weather interaction, climate change and variability components.

**UNIT IV** 

Potential production: leaf and canopy CO<sub>2</sub> assimilation, respiration, dry matter accumulation, crop phenology and dry matter distribution and development in different crops.

**UNIT V** 

Production by moisture availability, potential evapotranspiration, water balance of the soil, and production with nutrient and moisture limitations.

## **Practical**

- Simulation of elementary models for crop growth
- Simulation of potential production
- Simulation with limitations of water and nutrient management options
- Sensitivity analysis using different climatic years and crop management practices

## **Suggested Readings**

Gordan G. 1992. *System Simulation*. 2nd Ed. Prentice Hall. Kropff MJ & Vann Laar HH. (Ed.). 1993. *Modeling Crop Weed Interactions*. ISBN.

Zeigler BP. 1976. Theory of Modeling and Simulation. John Wiley & Sons.

# AGRON 604 ADVANCES IN CROP GROWTH AND PRODUCTIVITY (2+1) Objective

To study the physiology of vegetative and reproductive growth in relation to productivity of different crops in various environments.

## **Theory**

#### UNIT I

Plant density and crop productivity; plant and environmental factors, yield, plant distribution, strategies for maximizing solar energy utilization; leaf area; interception of solar radiation and crop growth; photosynthesis: the photosynthetic apparatus, factors essential for photosynthesis; difference in photosynthetic rates among and within species; physiological limitations to crop yield; solar radiation concept and agro-techniques for harvesting solar radiation.

## **UNIT II**

Growth analysis: concept, CGR, RGR, NAR, LAI, LAD, LAR; validity and Limitations in interpreting crop growth and development; growth curves: sigmoid, polynomial and asymptotic; root systems; root-shoot relationship; principles involved in inter and mixed cropping systems under rain fed and irrigated conditions; concept and differentiation of inter and mixed cropping; criteria in assessing the yield advantages.

#### **UNIT III**

Competitive relationship and competition functions; biological and agronomic basis of yield advantage under intercropping; physiological principles of dry land crop production, constraints and remedial measures; heat unit concept of crop maturity: concept and types of heat units.

## **UNIT IV**

Concept of plant ideotypes: crop physiological and new ideotypes; characteristics of ideotypes for wheat, rice, maize, etc.; concept and types of growth hormones; their role in field crop production; efficient use of resources.

#### **Practical**

- Field measurement of root-shoot relationship in crops at different growth stages
- Estimation of growth evaluating parameters like CGR, RGR, NAR, LAI etc., at different stages of crop growth
- Computation of harvest index of various crops
- Assessment of crop yield on the basis of yield attributing characters
- Construction of crop growth curves based on growth analysis data
- Computation of competition functions, viz. LER, IER aggressively competition index etc inintercropping
- Senescence and abscission indices
- Analysis of productivity trend in un-irrigated areas
- Analysis of productivity trend in irrigated areas

#### AGRON 605

#### IRRIGATION MANAGEMENT

(2+1)

## **Objective**

To teach students about optimization of irrigation in different crops under variable agro climatic conditions.

## **Theory**

#### UNIT I

Water resources of India, irrigation projects; irrigation needs, atmospheric, soil, agronomic, plant and water factors affecting irrigation need; water deficits and crop growth.

**UNIT II** 

Soil-plant-water relationships, transpiration and evapotranspiration, significance of transpiration, energy utilization in transpiration, physiological processes and crop productivity.

**UNIT III** 

Infiltration; water movement under saturated and unsaturated conditions; management practices for improving water use efficiency of crops.

#### **UNIT IV**

Application of irrigation water, conveyance and distribution system, irrigation efficiency; agronomic considerations in the design and operation of irrigation projects; characteristics of irrigation and farming systems affecting irrigation management.

UNIT V

Strategies of using limited water supply; factors affecting ET, control of ET by mulching and use of anti-Tran spirants; fertilizer use in relation to irrigation; optimizing the use of given irrigation supplies.

ÚNIT VI

Land suitability for irrigation, land irrigability classification; integrated water management in command areas, institution of water management in commands, farmer's participation in command areas; irrigation legislation.

#### **Practical**

- Determination of water infiltration characteristics and water holding capacity of soil profiles
  - Moisture extraction pattern of crops
- Consumptive use, water requirement of a given cropping pattern for optimum/variable productivity
  - Crop planning at the farm and project level
  - Agronomic evaluation of irrigation projects, case studies

## **Suggested Readings**

## AGRON 606 (2+0)

## ADVANCES IN WEED MANAGEMENT

## **Objective**

bjecuve

To teach about the changing weed flora, new herbicides, their resistance, toxicity, antidotes and residue management under different cropping systems.

## **Theory**

UNIT I

Crop-weed competition in different cropping situations; changes in weed flora, various causes and affects.

**UNIT II** 

Physiological and biological aspects of herbicides, their absorption, translocation, metabolism and mode of action; selectivity of herbicides and factors affecting them.

**UNIT III** 

Climatic factors and phytotoxicity of herbicides; fate of herbicides in soil and factors affecting them, residue management of herbicides, adjuvants.

**UNIT IV** 

Advances in herbicide application techniques; herbicide resistance; antidotes and crop protection compatibility of herbicides of different groups; compatibility of herbicides with other pesticides.

**UNIT V** 

Development of transgenic herbicide resistant crops; herbicide development, registration procedures.

**UNIT VI** 

Relationship of herbicides with tillage, fertilizer and irrigation; bio herbicides, allelochemical herbicide bioassays.

# AGRON 607 INTEGRATED FARMING SYSTEMS FOR (2+0)

#### SUSTAINABLE AGRICULTURE

## **Objective**

To apprise about different enterprises suitable for different agro climatic conditions for sustainable agriculture.

## **Theory**

UNIT I

Farming systems: definition and importance; classification of farming systems according to type of rotation, intensity of rotation, degree of commercialization, water supply, enterprises.

**UNIT II** 

Concept of sustainability in farming systems; efficient farming systems; natural resources - identification and management.

**UNIT III** 

Production potential of different components of farming systems; interaction and mechanism of different production factors; stability in different systems through research; eco-physiological approaches to intercropping.

UNIT IV

Simulation models for intercropping; soil nutrient in intercropping; preparation of different farming system models; evaluation of different farming systems.

IINIT V

New concepts and approaches of farming systems and cropping systems and organic farming; case studies on different farming systems.

## **Suggested Readings**

# AGRON 608 SOIL CONSERVATION AND WATERSHED MANAGEMENT (2+1) Objective

To teach about different soil moisture conservation technologies for enhancing the agricultural productivity through holistic approach watershed management.

## Theory

## UNIT I

Soil erosion: definition, nature and extent of erosion; types of erosion, factors affecting erosion.

**UNIT II** 

Soil conservation: definition, methods of soil conservation; agronomic measures - contour cultivation, strip cropping, cover crops; vegetative barriers; improved dry farming practices; mechanical measures - bunding, gully control, bench terracing; role of grasses and pastures in soil conservation; wind breaks and shelter belts.

**UNIT III** 

Watershed management: definition, objectives, principles, concepts, approach, components, steps in implementation of watershed; development of cropping systems for watershed areas.

**UNIT IV** 

Land use capability classification, alternate land use systems; agro-forestry; lay farming; *jhum and taungya* cultivation - basic concepts, socio-ethnic aspects, its layout.

UNIT V

Drainage considerations and agronomic management; rehabilitation of abandoned *jhum* lands and measures to prevent soil erosion.

## **Practical**

- Study of different types of erosion
- Field studies of different soil conservation measures
- Run-off and soil loss measurements
- Laying out run-off plot and deciding treatments
- Identification of different grasses and trees for soil conservation
- Visit to a soil conservation research centre, demonstration and training centre

## AGRON 609

## STRESS CROP PRODUCTION

(2+1)

## **Objective**

To study various types of stresses in crop production and strategies to overcome them.

## **Thery**

#### UNIT I

Stress and strain terminology; nature and stress injury and resistance; causes of stress

## **UNIT II**

Low temperature stress: freezing injury and resistance in plants, measurement of freezing tolerance, chilling injury and resistance in plants, practical ways to overcome the effect of low temperature stress through, soil and crop manipulations.

#### **UNIT III**

High temperature or heat stress: meaning of heat stress, heat injury and resistance in plants, practical ways to overcome the effect of heat stress through soil and crop manipulations.

## **UNIT IV**

Water deficit stress: meaning of plant water deficient stress and its effect on growth and development, water deficit injury and resistance, practical ways to overcome effect of water deficit stress through soil and crop, manipulations.

#### **UNIT V**

Excess water or flooding stress: meaning of excess water stress, its kinds and effects on crop plants, excess water stress injury and resistance, practical ways to overcome excess water stress through soil and crop manipulations.

#### UNIT VI

Salt stress: meaning of salt stress and its effect on crop growth, salt stress injury and resistance in plants, practical ways to overcome the effect of salt stress through soil and crop manipulations.

#### **UNIT VII**

Mechanical impedance of soil and its impact on plant growth; measures to overcome soil mechanical impedance.

#### **UNIT VIII**

Environmental pollution: air, soil and water pollution, and their effect on crop growth and quality of produce; ways and means to prevent environmental pollution.

#### **Practical**

- Determination of electrical conductivity of plant cell sap
- Determination of osmotic potential and tissue water potential
- Measurement of transpiration rate
- Measurement of stomatal frequency
- Growing of plants in sand culture under salt stress for biochemical and physiological studies
  - Studies on effect of osmotic and ionic stress on seed germination and seedling growth
  - Measurement of low temperature injury under field conditions

- 2. Ag.Chem.2.2: Soil Chemistry, Soil Fertility and Nutrient Management (2+1)

## SOIL SCIENCE AND AGRICULTURAL CHEMISTRY

## SOILS 501 SOIL PHYSICS (2+1)

## **Objective**

To impart basic knowledge about soil physical properties and processes in relation to plant growth.

## **Theory**

Scope of soil physics and its relation with other branches of soil science; soil as a three phase system. Soil texture, textural classes, mechanical analysis, specific surface. Soil consistence; dispersion and workability of soils; soil compaction and consolidation; soil strength; swelling and shrinkage - basic concepts. Soil structure - genesis, types, characterization and management soil structure; soil aggregation, aggregate stability; soil tilth, characteristics of good soil tilth; soil crusting - mechanism, factors affecting and evaluation; soil conditioners; puddling, its effect on soil physical properties; clod formation. Soil water: content and potential, soil water retention, soil-water constants, measurement of soil water content, energy state of soil water, soil water potential, soil-moisture characteristic curve; hysteresis, measurement of soilmoisture potential. Water flow in saturated and unsaturated soils, Poiseuille's law, Darcy's law; hydraulic conductivity, permeability and fluidity, hydraulic diffusivity; measurement of hydraulic conductivity in saturated and unsaturated soils. Infiltration; internal drainage and redistribution; evaporation; hydrologic cycle, field water balance; soil-plant-atmosphere continuum. Composition of soil air; renewal of soil air - convective flow and diffusion; measurement of soil aeration; aeration requirement for plant growth; soil air management. Modes of energy transfer in soils; energy balance; thermal properties of soil; measurement of soil temperature; soil temperature in relation to plant growth; soil temperature management.

## **Practical**

- Mechanical analysis by pipette and international methods
- Aggregate analysis dry and wet
- Measurement of soil-water content by different methods
- Measurement of soil-water potential by using tensiometer and gypsum blocks
- Determination of soil-moisture characteristics curve and computation of pore-size distribution
- Determination of hydraulic conductivity under saturated and unsaturated conditions
- Determination of infiltration rate of soil
- Determination of aeration porosity
- Soil temperature measurements by different methods
- Estimation of water balance components in bare and cropped fields

# SOILS 502 SOIL FERTILITY AND FERTILIZER USE (3+1) Objective

To impart knowledge about soil fertility and its control, and to understand the role of fertilizers and manures in supplying nutrients to plants so as to achieve high fertilizer use efficiency.

#### **Theory**

Soil fertility and soil productivity; nutrient sources – fertilizers and manures; essential plant nutrients - functions and deficiency symptoms. Bulky and concentrated organic manures, their composition, transformation in soil and their effect on soil productivity Role of manures in sustainable agriculture, Enriched compost preparation, Effect of manures on soil properties, Long term effect of FYM, vermin compost and rural as well as urban compost, Bulky and concentrated manures and their effect on soil properties. Soil and fertilizer nitrogen - sources, forms, immobilization and mineralization, nitrification, denitrification; biological nitrogen fixation types, mechanism, microorganisms and factors affecting; nitrogenous fertilizers and their fate in soils; management of fertilizer nitrogen in lowland and upland conditions for high fertilizer use efficiency. Soil and fertilizer phosphorus - forms, immobilization, mineralization, reactions in acid and alkali soils; factors affecting phosphorus availability in soils; phosphatic fertilizers - behavior in soils and management under field conditions. Potassium - forms, equilibrium in soils and its agricultural significance; mechanism of potassium fixation; management of potassium fertilizers under field conditions. Sulphur - source, forms, fertilizers and their behavior in soils; calcium and magnesium- factors affecting their availability in soils; management of sulphur, calcium and magnesium fertilizers. Micronutrients critical limits in soils and plants; factors affecting their availability and correction of their deficiencies in plants; role of chelates in nutrient availability. Common soil test methods for fertilizer recommendations; quantity- intensity relationships; soil test crop response correlations and functions. Fertilizer use efficiency; response blanket fertilizer recommendations - usefulness and limitations; site-specific nutrient management; plant need based nutrient management; integrated nutrient management. Soil fertility evaluation - biological methods, soil, plant and tissue tests; soil quality in relation to sustainable agriculture.

## **Practical**

- Principles of colorimetry
- Flame-photometry and atomic absorption spectroscopy
- Chemical analysis of soil for total and available nutrients
- Analysis of plants for essential elements

## **Suggested Readings**

SOILS 503 SOIL CHEMISTRY

(2+1)

## **Objective**

To introduce the classical concepts of soil chemistry and to familiarize students with modern developments in chemistry of soils in relation to using soils as a medium for plant growth.

#### **Theory**

Chemical (elemental) composition of the earth's crust and soils. Soil colloids: inorganic and organic colloids - origin of charge, concept of point of zerocharge (PZC) and its dependence on variable-charge soil components, surface charge characteristics of soils; diffuse double layer theories of soil colloids, zeta potential, stability, coagulation/flocculation and peptization of soil colloids; electrometric properties of soil colloids; sorption properties of soil colloids; soil organic matter - fractionation of soil organic matter and different fractions, clay-organic interactions. Ion exchange processes in soil; cation exchange- theories based on law of mass action (Kerr-Vanselow, Gapon equations, hysteresis, Jenny's concept), Silicate clay mineral, types of silicate clay minerals, characteristics and classification and important in agriculture. AEC, CEC; experimental methods to study ion exchange phenomena and practical implications in plant nutrition. Potassium, phosphate and ammonium fixation in soils covering specific and non-specific sorption; precipitationdissolution equilibria; step and constant-rate K; management aspects. Chemistry of acid soils; active and potential acidity; lime potential, chemistry of acid soils; sub-soil acidity. Chemistry of salt-affected soils and amendments; soil pH, ECe, ESP, SAR and important relations; soil management and amendments. Chemistry and electrochemistry of submerged soils.

#### **Practical**

- Determination of CEC and AEC of soils
- Analysis of equilibrium soil solution for pH, EC, Eh by the use of Eh-pH meter and conductivity meter
- Determination of point of zero-charge and associated surface charge characteristics by the serial potentiometric titration method
- • Determination of titratable acidity of an acid soil by BaCl2-TEA method
- Determination of lime requirement of an acid soil by buffer method
- Determination of gypsum requirement of an alkali soil

# SOILS 504 SOIL MINERALOGY, GENESIS, CLASSIFICATION (2+1) AND SURVEY

## **Objective**

To acquaint students with basic structure of alumino-silicate minerals and genesis of clay minerals; soil genesis in terms of factors and processes of soil formation, and to enable students conduct soil survey and interpret soil survey reports in terms of land use planning.

## **Theory**

Classification, structure, chemical composition and properties of clay minerals; genesis and transformation of crystalline and non-crystalline clay minerals; identification techniques; amorphous soil constituents and other non-crystalline silicate minerals and their identification; clay minerals in Indian soils. Factors of soil formation, soil formation models; soil forming processes; weathering of rocks and mineral transformations; soil profile; weathering sequences of minerals with special reference to Indian soils. Concept of soil individual; soil classification systems – historical developments and modern systems of soil classification with special emphasis on soil taxonomy; soil classification, soil mineralogy and soil maps – usefulness. Soil survey and its types; soil survey techniques - conventional and modern; soil series - characterization and procedure for establishing soil series; benchmark soils and soil correlations; soil survey interpretations; soil mapping, thematic soil maps, cartography, mapping units, techniques for generation of soil maps. Landform - soil relationship; major soil groups of India with special reference to respective states; land capability classification and land irrigability classification; land evaluation and land use type (LUT) – concept and application; approaches for managing soils and landscapes in the framework of agro-ecosystem.

#### **Practical**

- Identification of rocks and minerals
- Morphological properties of soil profile in different landforms
- Classification of soils using soil taxonomy
- Calculation of weathering indices and its application in soil formation
- Grouping soils using available data base in terms of soil quality
- Aerial photo and satellite data interpretation for soil and land use
- Cartographic techniques for preparation of base maps and thematic maps, processing of field sheets, compilation and obstruction of maps in different scales
- Land use planning exercises using conventional and RS tools

#### **SOILS 505**

#### SOIL EROSION AND CONSERVATION

(2+1)

## **Objective**

To enable students to understand various types of soil erosion and measures to be taken for controlling soil erosion to conserve soil and water.

## **Theory**

History, distribution, identification and description of soil erosion problems in India. Forms of soil erosion; effects of soil erosion and factors affecting soil erosion; types and mechanisms of water erosion; raindrops and soil erosion; rainfall erosivity - estimation as EI30 index and kinetic energy; factors affecting water erosion; empirical and quantitative estimation of water erosion; methods of measurement and prediction of runoff; soil losses in relation to soil properties and precipitation. Wind erosion- types, mechanism and factors affecting wind erosion; extent of problem in the country. Principles of erosion control; erosion control measures – agronomical and engineering; erosion

control structures - their design and layout. Soil conservation planning; land capability classification; soil conservation in special problem areas such as hilly, arid and semi-arid regions, waterlogged and wet lands. Watershed management - concept, objectives and approach; water harvesting and recycling; flood control in watershed management; socioeconomic aspects of watershed management; case studies in respect to monitoring and evaluation of watersheds; use of remote sensing in assessment and planning of watersheds.

#### **Practical**

- Determination of different soil erodibility indices suspension percentage, dispersion ratio, erosion ratio, clay ratio, clay/moisture equivalent ratio, percolation ratio, raindrop erodibility index
- Computation of kinetic energy of falling rain drops
- Computation of rainfall erosivity index (EI30) using rain gauge data
- Visits to a watersheds

## **SOILS 506**

## SOIL BIOLOGY AND BIOCHEMISTRY

(2+1)

## **Objective**

To teach students the basics of soil biology and biochemistry, including biogeochemical cycles, plant growth promoting rhizobacteria, microbial interactions in soil and other soil activities.

#### **Theory**

Soil biota, soil microbial ecology, types of organisms in different soils; soil microbial biomass; microbial interactions; un-culturable soil biota. Microbiology and biochemistry of root-soil interface; phyllosphere; soil enzymes, origin, activities and importance; soil characteristics influencing growth and activity of microflora. Microbial transformations of nitrogen, phosphorus, sulphur, iron and manganese in soil; biochemical composition and biodegradation of soil organic matter and crop residues, humus formation; cycles of important organic nutrients. Biodegradation of pesticides, organic wastes and their use for production of biogas and manures; biotic factors in soil development; microbial toxins in the soil. Preparation and preservation of farmyard manure, animal manures, rural and urban composts and vermicompost. Biofertilizers – definition, scope, classification, specifications, method of production and role in crop production. Constraint in application of biofertilizers.

#### **Practical**

- Determination of soil microbial population
- Soil microbial biomass
- Elemental composition, fractionation of organic matter and functional groups
- Decomposition of organic matter in soil
- Soil enzymes
- Measurement of important soil microbial processes such as ammonification, nitrification, N2 fixation, S oxidation, P solubilization and mineralization of other micro nutrients
- Study of rhizosphere effect

#### SOILS 507

#### GEOMORPHOLOGY AND GEOCHEMISTRY

(2+0)

## **Objective**

To impart knowledge about the landforms, physiography and morphologyof the earth surface, and distribution and weathering elements in the earth crust.

## **Theory**

General introduction to geology and geochemistry, major and minor morphogenic and genetic landforms, study of schematic landforms and their elements with special reference to India. Methodology of geomorphology, its agencies, erosion and weathering; soil and physiography relationships; erosion surface of soil landscape. Geochemical classification of elements; geochemical aspects of weathering and migration of elements; geochemistry of major and micronutrients and trace elements.

## **Suggested Readings**

Brikland PW. 1999. *Soils and Geomorophology*. 3rd Ed. Oxford Univ. Press. Likens GE & Bormann FH. 1995. *Geochemistry*. 2nd Ed. Springer Verlag. Mortvedt JJ, Shuman LM, Cox FR & Welch RM. 1991. *Micronutrients in Agriculture*. 2nd Ed. SSSA, Madison.

## **SOILS 508**

#### RADIOISOTOPES IN SOIL AND PLANT STUDIES

(1+1)

#### **Objective**

To train students in the use of radioisotopes in soil and plant research

#### **Theory**

Atomic structure, radioactivity and units; radioisotopes - properties and decay principles; nature and properties of nuclear radiations; interaction of nuclear radiations with matter. Principles and use of radiation monitoring instruments - proportional, Geiger Muller counter, solid and liquid scintillation counters; neutron moisture meter, mass spectrometry, auto radiography. Isotopic dilution techniques used in soil and plant research; use of stable isotopes; application of isotopes in studies on organic matter, nutrient transformations, ion transport, rooting pattern and fertilizer use efficiency; carbon dating. Doses of radiation exposure, radiation safety aspects regulatory aspects, collection, storage and disposal of radioactive wastes

## **Practical (Theorotical)**

- Storage and handling of radioactive materials
- Determination of half life and decay constant
- Preparation of soil and plant samples for radioactive measurements
- Setting up of experiment on fertilizer use efficiency and cation exchange equilibria using radioisotopes
- Determination of A, E and L values of soil using 32P/65Zn
- Use of neutron probe for moisture determination
- Sample preparation and measurement of 15N enrichment by mass spectrophotometery/emission spectrometry

## **Suggested Readings**

## SOILS 509 SOIL, WATER AND AIR POLLUTION (2+1)

## **Objective**

To make the students aware of the problems of soil, water and air pollution associated with use of soils for crop production.

#### **Theory**

Soil, water and air pollution problems associated with agriculture, nature and extent. Nature and sources of pollutants – agricultural, industrial, urban wastes, fertilizers and pesticides, acid rains, oil spills etc.; air, water and soil pollutants - their CPC standards and effect on plants, animals and human beings. Sewage and industrial effluents – their composition and effect on soil properties/health, and plant growth and human beings; soil as sink for waste disposal. Pesticides – their classification, behavior in soil and effect on soil microorganisms. Toxic elements – their sources, behavior in soils, effect on nutrients availability,

effect on plant and human health. Pollution of water resources due to leaching of nutrients and pesticides from soil; emission of greenhouse gases – carbon dioxide, methane and nitrous oxide. Remediation/amelioration of contaminated soil and water; remote sensing applications in monitoring and management of soil and water pollution.

#### **Practical**

- Sampling of sewage waters, sewage sludge, solid/liquid industrial wastes, polluted soils and plants
- Estimation of dissolved and suspended solids, chemical oxygen demand (COD), biological demand (BOD), nitrate and ammoniacal nitrogen and phosphorus, heavy metal content in effluents.
- Heavy metals in contaminated soils and plants

Determination of free CO<sub>2</sub> from the effluent water

- Management of contaminants in soil and plants to safeguard food safety
- Air sampling and determination of particulate matter and oxides of sulphur
- Visit to various industrial sites to study the impact of pollutants on soil and plants

#### **Suggested Readings**

# SOILS 510 REMOTE SENSING AND GIS TECHNIQUES FOR SOIL, WATER AND CROP STUDIES (2+1)

#### **Objective**

To impart knowledge about the basic concepts of remote sensing, aerial photographs and imageries, and their interpretation; application of remote sensing in general and with special reference to soil, plants and yield forecasting; to impart knowledge about geo-statistical techniques with special reference to krigging, and GIS and applications in agriculture.

## **Theory**

Introduction and history of remote sensing; sources, propagation of radiations in atmosphere; interactions with matter. Sensor systems - camera, microwave radiometers and scanners; fundamentals of aerial photographs and image processing and interpretations. Application of remote sensing techniques - land use soil surveys, crop stress and yield forecasting, prioritization in watershed and drought management, wasteland identification and management. Significance and sources of the spatial and temporal variability in soils; variability in relation to size of sampling; classical and geo-statistical techniques of evaluation of soil variability. Introduction to GIS and its application for spatial and non-spatial soil and land attributes.

#### **Practical**

- Familiarization with different remote sensing equipments and data products
- Interpretation of aerial photographs and satellite data for mapping of land resources
- Analysis of variability of different soil properties with classical and geostatistical techniques
- Creation of data files in a database programme
- Use of GIS for soil spatial simulation and analysis
- To enable the students to conduct soil survey and interpret soil survey reports in terms of land use planning

## **Suggested Readings**

# SOILS 511 ANALYTICAL TECHNIQUES AND INSTRUMENTAL (0+2) METHODS IN SOIL AND PLANT ANALYSIS

## **Objective**

To familiarize the students with commonly used instruments – their working, preparations of common analytical reagents for qualitative and quantitative analysis of both soil as well as plant samples.

#### **Practical**

Preparation of solutions for standard curves, analytical reagents, qualitative reagents, indicators and standard solutions for acid-base, oxidation reduction and complexometric titration; soil, water and plant sampling techniques, their processing and handling. Determination of nutrient potentials and potential buffering capacities of soils for phosphorus and potassium; estimation of phosphorus, ammonium and potassium fixation capacities of soils. Principles of visible, ultraviolet and infrared spectrophotometery, atomic absorption, flame-photometry, inductively coupled plasma spectrometry; chromatographic techniques, mass spectrometry and X-ray defractrometery; identification of minerals by X-ray by different methods. determination of cation and anion exchange capacities of soils; estimation of exchangeable cations (Na, Ca, Mg, K); estimation of root cation exchange capacity. Analysis of soil and plant samples for N, P, K, Ca, Mg, S, Zn, Cu, Fe, Mn, B and Mo; analysis of plant materials by digesting plant materials by wet and dry ashing and soil by wet digestion methods. Determination of lime and gypsum requirement of soil. Analysis of soil extracts and irrigation waters for their soluble cations and anions and interpretation of results.

## SOILS 512 SYSTEM APPROACHES IN SOIL AND CROP STUDIES (2+1)

## **Objective**

To train the students in concepts, methodology, technology and use of systems simulation in soil and crops studies.

#### **Theory**

Systems concepts - definitions, general characteristics; general systems theory; systems thinking, systems dynamics, systems behavior and systems study. Model: definition and types; mathematical models and their types; modeling: concepts, objectives, processes, abstraction techniques; simulation models, their verification and validation, calibration; representation of continuous systems simulation models - procedural and declarative. Simulation - meaning and threats; simulation experiment, its design and analysis. Application of simulation models in understanding system behavior, optimizing system performance, evaluation of policy options under different soil, water, nutrient, climatic and cultural conditions; decision support system, use of simulation models in decision support system.

#### **Practical**

- Use of flow chart or pseudo-code in the program writing
- Writing a small example simulation model program declarative (in Vensim PLE, Stella or Simile) and procedural (in Java, Fortran, QBasic or V Basic)
- Conducting simulation experiments in DSSAT, WOFOST or EPIC with requirement of report and conclusion

## SOILS 513 MANAGEMENT OF PROBLEM SOILS AND WATERS (2+1)

#### **Objective**

To educate students about basic concepts of problem soils and brackish water, and their management. Attention will be on management of problem soils and safe use of brackish water in relation to crop production.

## **Theory**

Area and distribution of problem soils – acidic, saline, sodic and physically degraded soils; origin and basic concept of problematic soils, and factors responsible. Morphological features of saline, sodic and saline-sodic soils; characterization of salt-affected soils - soluble salts, ESP, pH; physical, chemical and microbiological properties. Management of salt-affected soils; salt tolerance of crops - mechanism and ratings; monitoring of soil salinity in the field; management principles for sandy, clayey, red lateritic, calcareous and dry land soils. Acid soils - nature of soil acidity, sources of soil acidity; effect on plant growth, lime requirement of acid soils; management of acid soils; biological sickness of soils and its management. Quality of irrigation water; management of brackish water for irrigation; salt balance under irrigation; characterization of brackish waters, area and extent; relationship in water use and quality. Agronomic practices in relation to problematic soils; cropping pattern for utilizing poor quality ground waters.

#### **Practical**

- Characterization of acid, acid sulfate, salt-affected and calcareous soils
- $\bullet$  Determination of cations (Na+, K+, Ca++ and Mg++) in ground water and soil samples
- Determination of anions (Cl-, SO<sub>4</sub>-, CO<sub>3</sub>- and HCO<sub>3</sub>-) in ground waters and soil samples
- Lime and gypsum requirements of acid and sodic soils

## SOILS 514 FERTILIZER TECHNOLOGY

(1+0)

## **Objective**

To impart knowledge about how different fertilizers are manufactured using different kinds of raw materials and handling of fertilizers and manures.

## Theory

Fertilizers – production, consumption and future projections with regard to nutrient use in the country and respective states; fertilizer control order. Manufacturing processes for different fertilizers using various raw materials, characteristics and nutrient contents. Recent developments in secondary and micronutrient fertilizers and their quality control as per fertilizer control order. New and emerging issues in fertilizer technology – production and use of slow and controlled release fertilizers, super granules fertilizers and fertilizers for specific crops/situations.

## **Suggested Readings**

## SOILS 515 LAND DEGRADATION AND RESTORATION (1+0)

#### **Objective**

To impart knowledge related to various factors and processes of land degradation and their restoration techniques.

## **Theory**

Type, factors and processes of soil/land degradation and its impact on soil productivity, including soil fauna, biodegradation and environment. Land restoration and conservation techniques - erosion control, reclamation of salt-affected soils; mine land reclamation, afforestation, organic products. Extent, diagnosis and mapping of land degradation by conventional and modern RS-GIS tools; monitoring land degradation by fast assessment, modern tools, land use policy, incentives and participatory approach for reversing land degradation; global issues for twenty first century.

## **Suggested Readings**

## SOILS 601 ADVANCES IN SOIL PHYSICS

2+0

## **Objective**

To provide knowledge of modern concepts in soil physics.

#### **Theory**

Soil-water interactions, soil water potential, free energy and thermodynamic basis of potential concept, chemical potential of soil water and entropy of the system. Fundamentals of fluid flow, Poiseuilles law, Laplace's equation, Darcy's law in saturated and unsaturated flows; development of differential equations in saturated and unsaturated water flow, capillary conductivity and diffusivity; limitations of Darcy's law; numerical solution for one dimensional water flow. Theories of horizontal and vertical infiltration under different boundary conditions. Movement of salts in soils, models for miscibleimmiscible displacement, diffusion, mass flow and dispersion of solutes and their solutions through differential equations; break-through curves. Soil air and aeration, mass flow and diffusion processes; thermal properties of soil, heat transfer in soils, differential equation of heat flow, measurement of thermal conductivity of soil. Soil crust and clod formation; structural management of puddled rice soils; soil conditioning- concept, soils conditioners - types, characteristics, working principles, significance in agriculture. Solar and terrestrial radiation measurement, dissipation and distribution in soil-crop systems; prediction of evapotranspiration using aerodynamic and canopy temperature-based models; canopy temperature and leaf diffusion resistance in relation to plant water deficit; evaluation of soil and plant water status using infra-red thermometer.

Oswal MC.1994. Soil Physics. Oxford & IBH. 101

#### **Objective**

To provide knowledge of modern concepts of soil fertility and nutrient use in crop production.

## **Theory**

Modern concepts of nutrient availability; soil solution and plant growth; nutrient response functions and availability indices. Nutrient movement in soils; nutrient absorption by plants; mechanistic approach to nutrient supply and uptake by plants; models for transformation and movement of major micronutrients in soils. Chemical equilibria (including solid-solution equilbria) involving nutrient ions in soils, particularly in submerged soils. Modern concepts of fertilizer evaluation, nutrient use efficiency and nutrient budgeting. Modern concepts in fertilizer application; soil fertility evaluation techniques; role of soil tests in fertilizer use recommendations; site-specific nutrient management for precision agriculture. Monitoring physical, chemical and biological changes in soils; permanent manurial trials and long-term fertilizer experiments; soil productivity under long-term intensive cropping; direct, residual and cumulative effect of fertilizer use.

#### SOILS 603 PHYSICAL CHEMISTRY OF SOILS (2+0)

#### **Objective**

To impart knowledge about modern concepts of physical chemistry of soils and clays, with emphasis on understanding the processes involved with practical significance.

## **Theory**

Colloidal chemistry of inorganic and organic components of soils – their formation, clay organic interaction. Predictive approaches for cation exchange equilibria - thermodynamics, empirical and diffuse double layer theory (DDL) - relationships among different selectivity coefficients; structure and properties of diffuse double layer. Thermodynamics of nutrient transformations in soils; cationic and anionic exchange and their models, molecular interaction. Adsorption/desorption isotherms - Langmuir adsorption isotherm, Freundlich adsorption isotherm, normalized exchange isotherm, BET equation; selective and non-selective adsorption of ions on inorganic surfaces and organic surfaces of soil materials (citation of utility in agricultural system). Common solubility equilibria - carbonates, iron oxide and hydroxides, aluminum silicate, aluminum phosphate; electrochemical properties of clays (citation of examples from agricultural use).

## SOILS 604 SOIL GENESIS AND MICROPEDOLOGY (2+0)

#### **Objective**

To impart knowledge about the pedogenic processes in soils and to acquaint with the micro-pedological study of soil profile.

## **Theory**

Pedogenic evolution of soils; soil composition and characterization. Weathering and soil formation – factors and pedogenic processes; stability and weathering sequences of minerals. Assessment of soil profile development by mineralogical and chemical analysis. Micro-pedological features of soils – their structure, fabric analysis, role in genesis and classification.

#### **Suggested Readings**

Boul SW, Hole ED, MacCraken RJ & Southard RJ. 1997. Soil Genesis and Classification. 4th Ed. Panima Publ.

Brewer R. 1976. Fabric and Mineral Analysis of Soils. John Wiley & Sons.

## SOILS 605 BIOCHEMISTRY OF SOIL ORGANIC MATTER (2+0)

## **Objective**

To impart knowledge related to chemistry and reactions of organic substances and their significance in soils.

## **Theory**

Organic matter pools in soil; composition and distribution of organic matter in soil and its functions; environmental significance of humic substances; decomposition of organic residues in soil in relation to organic matter pools. Biochemistry of the humus formation; different pathways for humus synthesis in soil; soil carbohydrates and lipids. Nutrient transformation—N, P, S; trace metal interaction with humic substances, significance of chelation reactions in soils. Reactive functional groups of humic substances, adsorption of organic compounds by clay and role of organic substances in pedogenic soil aggregation processes; clay-organic matter complexes. Humus - pesticide interactions in soil, mechanisms.

# SOILS 606 LAND USE PLANNING AND WATERSHED (2+0) MANAGEMENT

## **Objective**

To teach the better utilization of land for agricultural purposes, and better management of run-off or surplus/excessive rain-water in the catchment area for agricultural purposes in a watershed.

## **Theory**

Concept and techniques of land use planning; factors governing present land use. Land evaluation methods and soil-site suitability evaluation for different crops; land capability classification and constraints in application. Agroecological regions/sub-regions of India and their characteristics in relation to crop production. Water harvesting - concept, significance, types, methodology; use of harvested water in agriculture to increase water productivity. Watershed development/management - concept, objectives, characterization, planning, execution, community participation and evaluation; rehabilitation of watershed; PRA; developing economically and ecologically sustainable agroforestry systems for watershed; case studies.

## **Suggested Readings**

- USDA 1974. A Manual on Conservation of Soil and Water Handbook of Professional Agricultural Workers. Oxford & IBH.

#### **SOIL SCIENCE**

#### **List of Journals**

- Advances in Agronomy
- Annals of Arid Zone
- Australian Journal of Agricultural Research
- Australian Journal of Soil Research
- Biology and Fertility of Soils
- Communications in Soil Science and Plant Analysis
- Clays and Clay minerals
- European Journal of Soil Science
- Geoderma
- Indian Journal of Agricultural Sciences
- Journal of Plant Nutrition and Soil Science
- Journal of the Indian Society of Soil Science
- Nutrient Cycling in Agroecosystems
- Plant and Soil
- Soil and Tillage Research
- Soil Biology and Biochemistry
- Soil Science
- Soil Science Society of America Journal
- Soil Use and Management
- Water, Air and Soil Pollution
- Water Resources Research

## **Suggested Broad Topics for Master's and Doctoral Research**

- Degradation and restoration of soil as natural resource
- Biochemistry of processes at the soil-root interface
- Impact of current agricultural practices and agrochemicals on soil quality/biodiversity
- Integrated nutrient management for sustainable agriculture
- Fertilizer use efficiency in different soil conditions/cropping systems
- Use of remote sensing and GIS as diagnostic tool for natural resource management
- Role of biological agents in soil productivity
- Modelling solute (salt, fertilizer, pesticides) transport in soil
- Use of poor quality waters in Agriculture
- Soil testing and crop response
- Site-specific nutrient management and precision agriculture
- Nutrient dynamics in soil-plant system and modelling nutrient uptake
- Tillage and crop residue management in crop production

- Utilization of urban and industrial wastes/effluents in Agriculture
- Management of problematic soils
- Impact of climate change on soil processes
- Micronutrients in soil, plant and human health
- Water management strategies in different cropping systems
- Simulation models for growth and production of different crops
- Varietals response to soil salinity/ sodicity/ nutrients/ pollutants, etc
- Soil and water pollution monitoring and control
- Genesis, formation and classification of soils
- Soil conservation, preservation and management for sustainable agriculture
- Remediation of polluted and contaminated soils

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

# PLANT PROTECTION

Entomology Nematology Plant Pathology

Gujarat Agricltural Universities, Gujarat (Anand, Sardarkrushinagar, Navsari,Junagadh)

MAY 2010

## **EXECUTIVE SUMMARY**

The new and restructured post-graduate academic programme for plant protection sciences includes many new aspects/features, some of them are as follows.

#### **Entomology**

- A detailed treatise on post-harvest losses due to insects, mites, rodents, birds and microorganisms in stored grains and methods of their control
- Role of soil arthropods in detritus feeding, litter breakdown and humus formation
- Acarology: Economic importance of mites to different crops, poly-houses, stored products and honey bees
- Commercial Entomology: Apiculture; sericulture; lac insects; insect pests of public health importance, cattle, poultry and pet animals; termite proofing of buildings; rodent control; organic methods of domestic pest management
- Agricultural Ornithology: Pestiferous and beneficial birds associated with different crops
- Immature stages of insects: Their identification and significance for pest management
- DNA-based diagnostic and DNA finger-printing for taxonomy and phylogeny
- Marker-aided selection in resistance breeding
- Resistance management strategies in transgenic crops
- Scope of genetically engineered microbes and parasitoids in biological control
- Dynamism of IPM under changing cropping systems and climate
- IPM under protected cultivation

## Nematology

- Entomopathogenic nematodes: Mass multiplication techniques, formulations, field application and efficacy
- Nematodes as biological model systems
- Nematodes as indicators of pollution and their role in organic matter recycling
- Development of computer-based identification programmes
- Nematode management options for organic farming and precision farming
- Application of GIS and GPS technology for surveillance and management
- Resistance genes and RNAi technology

## **Plant Pathology**

 Integrated approach in controlling post harvest diseases and improving shelflife of produce; knowledge of Codex Alimentarious for each product and commodity

- Plant Bio-security and Bio-safety: Invasive alien species, Bio-warfare, National Regulatory Mechanism and International Agreements/Conventions; issues related to GM crops; strategies for combating risks and costs associated with agro-terrorism
- Seed Health Technology: Sanitary and Phyto-sanitary issues under WTO
- Mushroom Production Technology: Complete package for entrepreneurial skills
- Principles and Procedures of Certification: Role of international agencies in certification and quality control, fixing tolerance limits for diseases and insect pests in certification, accreditation of seed testing laboratories, role of seed/planting material health certification in national and international trade

## General

- Introduction of compulsory non-credit courses on:
  - o Library and Information Services
  - o Technical Writing and Communication Skills
  - o Intellectual Property and its Management in Agriculture
  - o Basic Concepts in Laboratory Techniques
  - o Agricultural Research, Research Ethics and Rural Development Programmes
  - o Disaster Management
- Provision of budgetary estimates to the extent of Rs 50 crores for implementation of revised curriculum in Plant Protection recommended.

## ENTOMOLOGY Course Structure – at a Glance

CODE	COURSE TITLE	<b>CREDITS</b>
ENT 501*	INSECT MORPHOLOGY	(1+1)
ENT 502*	INSECT ANATOMY, PHYSIOLOGY AND	(2+1)
	NUTRITION	
ENT 503 / NEMA 502s	PRINCIPLES OF TAXONOMY	(2+0)
ENT 504*	CLASSIFICATION OF INSECTS	(2+1)
ENT 505*	INSECT ECOLOGY	(1+1)
ENT 506	INSECT PATHOLOGY	(1+1)
ENT 507*	BIOLOGICAL CONTROL OF CROP PESTS AND	(1+1)
	WEEDS	
ENT 508*	TOXICOLOGY OF INSECTICIDES	(2+1)
ENT 509	PLANT RESISTANCE TO INSECTS	(1+1)
ENT 510* / NEMA	PRINCIPLES OF INTEGRATED PEST	(1+1)
512s	MANAGEMENT	
ENT 511*#	PESTS OF FIELD CROPS	(1+1)
ENT 512*#	PESTS OF HORTICULTURAL AND PLANTATION	(1+1)
	CROPS	
ENT 513	STORAGE ENTOMOLOGY	(1+1)
ENT 514 / PL.PATH	INSECT VECTORS OF PLANT VIRUSES AND	(1+1)
514s	OTHER PATHOGENS	
ENT 515	GENERAL ACAROLOGY	(1+1)
ENT 516	SOIL ARTHROPODS AND THEIR MANAGEMENT	(1+1)
ENT 517	TECHNIQUES IN PLANT PROTECTION	(0+1)
ENT 519	COMMERCIAL ENTOMOLOGY	(1+1)
ENT 520 / NEMA 514 /	PLANT QUARANTINE	(2+0)
PL.PATH 520s		
ENT 591	MASTER'S SEMINAR	(1+0)
ENT 599	MASTER'S RESEARCH	(20)
ENT 601	ADVANCED INSECT SYSTEMATICS	(1+2)
ENT 602	IMMATURE STAGES OF INSECTS	(1+1)
ENT 603	ADVANCED INSECT PHYSIOLOGY	(2+0)
ENT 604	ADVANCED INSECT ECOLOGY	(1+1)
ENT 605	INSECT BEHAVIOUR	(1+1)
ENT 606	RECENT TRENDS IN BIOLOGICAL CONTROL	(1+1)
ENT 607	ADVANCED INSECTICIDE TOXICOLOGY	(2+1)
ENT 608	ADVANCED HOST PLANT RESISTANCE	(1+1)
ENT 609	ADVANCED ACAROLOGY	(1+1)
ENT 610	AGRICULTURAL ORNITHOLOGY	(1+1)
ENT 611**	MOLECULAR APPROACHES IN ENTOMOLOGICAL	(1+1)
	RESEARCH	
ENT 612**	ADVANCED INTEGRATED PEST MANAGEMENT	(2+0)
	PLANT BIOSECURITY AND BIOSAFETY	(2+0)
606\$		
ENT 691	DOCTORAL SEMINAR -I	(1+0)
ENT 692	DOCTORAL SEMINAR- II	(1+0)
ENT 699	DOCTORAL RESEARCH	(45)

<sup>\*</sup>Compulsory for Master's programme; \*\* Compulsory for Ph.D. programme #One out of 511 or 512 is compulsory; \$ Cross-listed with Plant Pathology

# **ENTOMOLOGY Course Contents**

#### ENT 501 INSECT MORPHOLOGY

1+1

## **Objective**

To acquaint the students with external morphology of the insect's body i.e.;head, thorax and abdomen, their appendages and functions.

## **Theory**

UNIT I

Principles, utility and relevance: insect body wall structure, cuticular outgrowths, colouration and special integumentary structures in insects, body tagmata, sclerites and segmentation.

**UNIT II** 

Head- Origin, structure and modification; tentorium and neck sclerites.

**UNIT III** 

Thorax- Areas and sutures of tergum, sternum and pleuron, pterothorax; Wings: Structure and modifications, venation, and mechanism of flight; Legs: structure Hexapod locomotion

**UNIT IV** 

Abdomen- Segmentation and appendages; Genitalia and their modifications; Embryonic and post-embryonic development; Types of metamorphosis. Insect sense organs (mechano-, photo- and chemoreceptors).

#### **Practical**

Study of insect segmentation, various tagmata and their appendages; preparation of permanent mounts of different body parts and their appendages of taxonomic importance including male and female genitalia. Sense organs.

#### **Suggested Readings**

Saxena RC & Srivastava RC. 2007. *Entomology: At a Glance*. Agrotech Publ. Academy, Jodhpur.

Snodgross RE. 1993. *Principles of Insect Morphology*. Cornell Univ. Press, Ithaca.

## ENT 502 INSECTANATOMY, PHYSIOLOGY AND NUTRITION 2+1

## **Objective**

To impart knowledge to the students on basic aspects of anatomy of different systems, elementary physiology, nutritional physiology and their application in entomology.

#### **Theory**

UNIT I

Scope and importance of insect anatomy and physiology.

#### UNIT II

Structure, modification and physiology of different systems- digestive, circulatory, respiratory, excretory, nervous, sensory, reproductive, musculature, endocrine and exocrine glands [*More weightage on physiology*].

**UNIT III** 

Thermodynamics; physiology of integument, moulting; growth, metamorphosis and diapause.

**UNIT IV** 

Insect nutrition- role of vitamins, proteins, amino acids, carbohydrates, lipids, minerals and other food constituents; extra and intra-cellular microorganisms and their role in physiology; artificial diets.

#### **Practical**

Dissection of different insects to study comparative anatomical details of different systems; preparation of permanent mounts of internal systems; chromatographic analysis of free amino acids of haemolymph; determination of chitin in insect cuticle; examination of insect haemocytes; determination of respiratory quotient; preparation and evaluation of various diets; consumption, utilization and digestion of natural and artificial diets.

## **Suggested Readings**

Chapman RF.1998. Insects: Structure and Function. ELBS Ed., London.

Duntson PA. 2004. *The Insects: Structure, Function and Biodiversity*. Kalyani Publ., New Delhi.

Patnaik BD. 2002. Physiology of Insects. Dominant, New Delhi.

Richards OW & Davies RG. 1977. *Imm's General Text Book of Entomology*. 10th Ed. Vol. 1. *Structure, Physiology and Development*. Chapman & Hall, New York.

Saxena RC & Srivastava RC. 2007. *Entomology at a Glance*. Agrotech Publ. Academy, Jodhpur.

Wigglesworth VB.1984. Insect Physiology. 8th Ed. Chapman & Hall, New York.

## ENT 503/ NEMA 502

#### PRINCIPLES OF TAXONOMY

2+0

## **Objective**

To sensitize the students on the theory and practice of classifying organisms and the rules governing the same.

#### **Theory**

#### UNIT I

Introduction to history and principles of systematics and importance. Levels and functions of systematics. Identification, purpose, methods, character matrix, taxonomic keys. Descriptions- subjects of descriptions, characters, nature of characters, analogy vs homology, parallel vs convergent evolution, intraspecific variation in characters, polythetic and polymorphic taxa, sexual dimorphism.

## UNIT II

Classification of animals: Schools of classification- Phenetics, Cladistics and Evolutionary classification. Components of Biological Classification: Hierarchy, Rank, Category and Taxon. Species concepts, cryptic, sibling and etho-species, infra-specific categories. Introduction to numerical, biological and cytogenetical taxonomy.

#### **UNIT III**

Nomenclature: Common vs Scientific names. International Code of Zoological Nomenclature, criteria for availability of names, validity of names. Categories of names under consideration of ICZN. Taxonomic publications, Principles of priority, and homonymy, synonymy, type concept in zoological nomenclature. Speciation, anagenesis vs cladogenesis, allopatric, sympatric and parapatric processes.

## **Suggested Readings**

Blackwelder RE. 1967. *Taxonomy - A Text and Reference Book*. John Wiley & Sons, New York.

Kapoor VC. 1983. *Theory and Practice in Animal Taxonomy*. Oxford & IBH, New Delhi.

Mayr E. 1971. *Principles of Systematic Zoology*. Tata McGraw-Hill, New Delhi. Quicke DLJ. 1993. *Principles and Techniques of Contemporary Taxonomy*. Blackie, London.

#### ENT 504 CLASSIFICATION OF INSECTS

2+1

#### **Objective**

To introduce the students to the classification of insects up to the level of families with hands-on experience in identifying the families of insects.

#### **Theory**

## UNIT I

Brief evolutionary history of Insects- introduction to phylogeny of insects and Major Classification of Superclass Hexapoda – Classes – Ellipura (Collembola, Protura), Diplura and Insecta- Orders contained.

#### UNIT II

Distinguishing characters, general biology, habits and habitats of Insect orders and economically important families contained in them. Collembola, Protura, Diplura. Class Insecta: Subclass Apterygota — Archaeognatha, Thysanura. Subclass: Pterygota, Division Palaeoptera — Odonata and Ephemeroptera. Division: Neoptera: Subdivision: Orthopteroid and Blattoid Orders (=Oligoneoptera: Plecoptera, Blattodea, Isoptera, Mantodea, Grylloblattodea, Dermaptera, Orthoptera, Phasmatodea, Mantophasmatodea, Embioptera, Zoraptera), Subdivision: Hemipteroid Orders (=Paraneoptera): Psocoptera, Phthiraptera, Thysanoptera and Hemiptera.

#### **UNIT III**

Distinguishing characters, general biology, habits and habitats of Insect orders and economically important families contained in them (Continued). Division Neoptera – Subdivision Endopterygota, Section Neuropteroid- Coleopteroid Orders: Strepsiptera, Megaloptera, Raphidioptera, Neuroptera and Coleoptera, Section Panorpoid Orders Mecoptera, Siphonaptera, Diptera, Trichoptera, Lepidoptera, and Section Hymenopteroid Orders: Hymenoptera.

#### **Practical**

Study of Orders of insects and their identification using taxonomic keys. Keying out families of insects of different major Orders: Odonata, Orthoptera, Blattodea, Mantodea, Isoptera, Hemiptera, Thysanoptera, Phthiraptera, Neuroptera, Coleoptera, Diptera, Lepidoptera and Hymenoptera. Field visits to collect insects of different orders.

#### **Suggested Readings**

CSIRO 1990. The Insects of Australia: A Text Book for Students and Researchers. 2nd Vols. I & II, CSIRO. Cornell Univ. Press, Ithaca.

Freeman S & Herron JC. 1998. *Evolutionary Analysis*. Prentice Hall, New Delhi. Richards OW & Davies RG. 1977. *Imm's General Text Book of Entomology*. 10th Ed. Chapman & Hall, London.

Ross HH.1974. *Biological Systematics*. Addison Wesley Publ. Co. Triplehorn CA & ohnson NF. 1998. *Borror and DeLong's Introduction to the Study of Insects*. 7th Ed. Thomson/Brooks/Cole, USA/Australia.

## ENT 505 INSECT ECOLOGY 1+1

#### **Objective**

To teach the students the concepts of ecology, basic principles of distribution and abundance of organisms and their causes. Study life tables, organization of communities, diversity indicies. Train students in sampling methodology, calculation of diversity indicies, constructing life tables, relating insect population fluctuations to biotic and/or abiotic causes.

#### **Theory**

#### UNIT I

History and Definition. Basic Concepts. Organisation of the Biological world. Plato's Natural Balance vs Ecological Dynamics as the modern view. Abundance and diversity of insects, Estimates and Causal factors. Study of abundance and distribution and relation between the two. Basic principles of abiotic factors and their generalised action on insects. Implications for abundance and distribution of organisms including insects-Law of the Minimum, Law of Tolerance, and biocoenosis, Systems approach to ecology.

#### UNIT II

Basic concepts of abundance- Model vs Real world. Population growthbasic models – Exponential vs Logistic models. Discrete vs Continuous growth models. Concepts of Carrying capacity, Environmental Resistance and Optimal yield. Vital Statistics- Life Tables and their application to insect biology. Survivorship curves. Case studies of insect life tables Population dynamics-Factors affecting abundance- Environmental factors, dispersal and migration, Seasonality in insects. Classification and mechanisms of achieving different seasonality- Diapause (Quiescence) - aestivation, hibernation.

#### **UNIT III**

Biotic factors- Food as a limiting factor for distribution and abundance, Nutritional Ecology. Food chain- web and ecological succession. Interspecific interactions- Basic factors governing the interspecific interactions- Classification of interspecific interactions - The argument of cost-benefit ratios. Competition- Lotka-Volterra model, Concept of nicheecological homologues, competitive exclusion. Prey-predator interactions-Basic model- Lotka-Volterra Model, Volterra's principle. Functional and numerical response. Defense mechanisms against predators/parasitoids- Evolution of mimicry, colouration, concept of predator satiation; evolution of life history strategies.

## UNIT IV

Community ecology- Concept of guild, Organisation of communities-Hutchinson Ratio, May's d/w, Relation between the two and their association with Dyar's Law and Przibram's law. Relative distribution of organisms, Concept

of diversity- the Wallacian view. Assessment of diversity. Diversity- stability debate, relevance to pest management. Pest management as applied ecology.

#### **Practical**

Types of distributions of organisms. Methods of sampling insects, estimation of densities of insects and understanding the distribution parameters- Measures of central tendencies, Poisson Distribution, Negative Binomial Distribution. Determination of optimal sample size. Learning to fit basic population growth models and testing the goodness of fit. Fitting Holling's Disc equation, Assessment of prey-predator densities from natural systems and understanding the correlation between the two. Assessing and describing niche of some insects of a single guild. Calculation of niche breadth, activity breadth and diagrammatic representation of niches of organisms. Calculation of some diversityindices-Shannon's, Simpson's and Avalanche Index and understanding their associations and parameters that affect their values. Problem solving in ecology. Field visits to understand different ecosystems and to study insect occurrence in these systems.

## ENT 506 INSECT PATHOLOGY 1+1

## **Objective**

To teach the students about various microbes that are pathogenic to insects, factors that affect their virulence; provide hands-on training in identification, isolation, culturing various pathogens and assessing pathogenicity.

#### **Theory**

#### UNIT I

History of insect pathology, infection of insects by bacteria, fungi, viruses, protozoa, rickettsiae, spiroplasma and nematodes.

#### **UNIT II**

Epizootiology, symptomatology and etiology of diseases caused by the above and the factors controlling these. Defense mechanisms in insects against pathogens.

UNIT III

Examples of successful instances of exploitation of pathogens for pest management and mass production techniques of pathogens. Safety and registration of microbial pesticides. Use of insect pathogens in integrated management of insect pests.

#### **Practical**

Familiarization with equipment used in insect pathology laboratory. Identification of different groups of insect pathogens and symptoms of infection. Isolation, culturing and testing pathogenicity of different groups of pathogens. Testing Koch's postulates. Estimation of pathogen load. Extraction of pathogens from live organisms and soil. Bioassays to determine median lethal doses.

## **Suggested Readings**

Boucias DG & Pendland JC. 1998. *Principles of Insect Pathology*. Kluwer Academic Publisher, Norwel.

Burges HD & Hussey NW. (Eds). 1971. *Microbial Control of Insects and Mites*. Academic Press, London.

Steinhaus EA. 1984. Principles of Insect Pathology. Academic Press, London.

#### ENT 507 BIOLOGICAL CONTROL OF CROP PESTS AND WEEDS 1+1

## **Objective**

To train the students with theory and practice of biological control, mass production techniques and field evaluation of various biological control agents like parasitoids, predators and various entomopathogenic microorganisms.

## **Theory**

UNIT I

History, principles and scope of biological control; important groups of parasitoids, predators and pathogens; principles of classical biological control-importation, augmentation and conservation.

UNIT II

Biology, adaptation, host seeking behaviour of predatory and parasitic groups of insects. Role of insect pathogenic nematodes, viruses, bacteria, fungi, protozoa etc., their mode of action. Biological control of weeds using insects and pathogens.

**UNIT III** 

Mass production of quality biocontrol agents- techniques, formulations, economics, field release/application and evaluation.

**UNIT IV** 

Successful biological control projects, analysis, trends and future possibilities of biological control. Importation of natural enemies- Quarantine regulations, biotechnology in biological control. Semiochemicals in biological control.

#### **Practical**

Identification of common natural enemies of crop pests (parasitoids, predators, microbes) and weed killers. Visits (only where logistically feasible) to biocontrol laboratories to learn rearing and mass production of egg, egg-larval, larval, larval-pupal and pupal parasitoids, common predators, microbes and their laboratory hosts, phytophagous natural enemies of weeds. Field collection of

parasitoids and predators. Hands-on training in culturing, identification of common insect pathogens. Quality control and registration standards for biocontrol agents.

## **Suggested Readings**

#### **ENT 508**

#### TOXICOLOGY OF INSECTICIDES

2+1

## **Objective**

To orient the students with structure and mode of action of important insecticides belonging to different groups, development of resistance to insecticides by insects, environmental pollution caused by toxic insecticides and their toxicological aspects.

## **Theory**

#### UNIT I

Definition and scope of insecticide toxicology; history of chemical control; pesticide use and pesticide industry in India.

#### UNIT II

Classification of insecticides and acaricides based on mode of entry, mode of action, toxicity and chemical nature. Structure and mode of action of organochlorines, organophosphates, carbamates, pyrethroids, tertiary amines, neonicotinoids, oxadiazines, phenyl pyrozoles, insect growth regulators, microbials, botanicals, new promising compounds, etc.

#### **UNIT III**

Principles of toxicology; evaluation of insecticide toxicity; joint action of insecticides- synergism, potentiation and antagonism; factors affecting toxicity of insecticides; insecticide compatibility, selectivity and phyto-toxicity.

## **UNIT IV**

Insecticide metabolism; pest resistance to insecticides; mechanisms and types of resistance; insecticide resistance management and pest resurgence.

## UNIT V

Insecticide residues, their significance and environmental implications. Insecticide Act, registration and quality control of insecticides; safe use of insecticides; diagnosis and treatment of insecticide poisoning.

#### **Practical**

Insecticide formulations and mixtures; quality control of pesticide formulations; laboratory and field evaluation of bioefficacy of insecticides; bioassay

techniques; probit analysis; evaluation of insecticide toxicity and joint action. Toxicity to beneficial insects. Pesticide appliances. Working out doses and concentrations of pesticides; visit to toxicology laboratories. Good laboratory practices.

#### ENT 509 PLANT RESISTANCE TO INSECTS

1+1

## **Objective**

To familiarize the students with types, basis, mechanisms and genetics of resistance in plants to insects and role of plant resistance in pest management.

## **Theory**

UNIT I

History and importance of resistance, principles, classification, components, types and mechanisms of resistance.

**UNIT II** 

Insect-host plant relationships; theories and basis of host plant selection in phytophagous insects.

**UNIT III** 

Chemical ecology, tritrophic relations, volatiles and secondary plant substances; basis of resistance. Induced resistance - acquired and induced systemic resistance.

**UNIT IV** 

Factors affecting plant resistance including biotypes and measures to combat them.

UNIT V

Screening techniques; breeding for insect resistance in crop plants; exploitation of wild plant species; gene transfer, successful examples of resistant crop varieties in India and world.

**UNIT VI** 

Role of biotechnology in plant resistance to insects.

#### **Practical**

Screening techniques for measuring resistance; measurement of plant characters and working out their correlations with plant resistance; testing of resistance in important crops; bioassay of plant extracts of susceptible/resistant varieties; demonstration of antibiosis, tolerance and antixenosis.

## **Suggested Readings**

Dhaliwal GS & Singh R. (Eds). 2004. Host Plant Resistance to Insects - Concepts and Applications. Panima Publ., New Delhi.

## ENT 510/ NEMA 510 PRINCIPLES OF INTEGRATED PEST MANAGEMENT (1+1)

## **Objective**

To familiarize the students with principles of insect pest management, including concept and philosophy of IPM. Train students in computation of ETL, implementing IPM programmes.

## **Theory**

UNIT I

History and origin, definition and evolution of various related terminologies.

**UNIT II** 

Concept and philosophy, ecological principles, economic threshold concept, and economic consideration.

UNIT III

Tools of pest management and their integration- legislative, cultural, physical and mechanical methods; pest survey and surveillance, forecasting, types of surveys including remote sensing methods, factors affecting surveys; political, social and legal implications of IPM; pest risk analysis; pesticide risk analysis; cost-benefit ratios and partial budgeting; case studies of successful IPM programmes.

#### **Practical**

Characterization of agro-ecosystems; sampling methods and factors affecting sampling; population estimation methods; crop loss assessmentdirect losses, indirect losses, potential losses, avoidable losses, unavoidable losses. Computation of EIL and ETL; crop modeling; designing and implementing IPM system.

## **Suggested Readings**

Subramanyam B & Hagstrum DW. 1995. *Integrated Management of Insects in Stored Products*. Marcel Dekker, New York.

## **Objective**

To familiarize the students about nature of damage and seasonal incidence of insect pests that cause loss to major field crops and their effective management by different methods.

## **Theory**

Systematic position, identification, distribution, host-range, bionomics, nature and extent of damage, seasonal abundance and management of insect and mite pests and vectors.

UNIT I

Insect pests of cereals and millets and their management. Polyphagous pests: grasshoppers, locusts, termites, white grubs, hairy caterpillars, and non-insect pests (mites, birds, rodents, snails, slugs etc.).

UNIT II

Insect pests of pulses, tobacco, oilseeds and their management.

**UNIT III** 

Insect pests of fibre crops, forages, sugarcane and their management.

#### **Practical**

Field visits, collection and identification of important pests and their natural enemies; detection and estimation of infestation and losses in different crops; study of life history of important insect pests.

## **Suggested Readings**

Atwal AS, Dhaliwal GS & David BV. 2001. *Elements of Economic Entomology*. Popular Book Depot, Chennai.

## ENT 512 PESTS OF HORTICULTURAL AND PLANTATION CROPS 1+1

#### **Objective**

To impart knowledge on major pests of horticultural and plantation crops regarding the extent and nature of loss, seasonal history, their integrated management.

## Theory

Systematic position, identification, distribution, host range, bionomics and seasonal bundance, nature and extent of damage and management of insect pests of various crops.

UNIT I

Fruit Crops- mango, guava, banana, jack, papaya, pomegranate, litchi, grapes, *ber*, fig, citrus, *aonla*, pineapple, apple, peach and other temperate fruits.

**UNIT II** 

Vegetable crops- tomato, potato, radish, carrot, beetroot, cole crops, French beans, chow-chow, brinjal, okra, all gourds, gherkin, drumstick, leafy vegetables etc.

#### **UNIT III**

Plantation crop- coffee, tea, rubber, coconut, arecanut, cashew, cocoa etc.; Spices and Condiments- pepper, cardamom, clove, nutmeg, chillies, turmeric, ginger, beetlevine etc.

**UNIT IV** 

Ornamental, medicinal and aromatic plants and pests in polyhouses/protected cultivation.

#### **Practical**

Collection and identification of important pests and their natural enemies on different crops; study of life history of important insect pests and noninsect pests.

## **Suggested Readings**

Atwal AS & Dhaliwal GS. 2002. Agricultural Pests of South Asia and their Management. Kalyani Publ., New Delhi.

Butani DK & Jotwani MG. 1984. *Insects and Vegetables*. Periodical Expert Book Agency, New Delhi.

Verma LR, Verma AK & Goutham DC. 2004. *Pest Management in Horticulture Crops : Principles and Practices*. Asiatech Publ., New Delhi.

#### **ENT 513**

#### STORAGE ENTOMOLOGY

1+1

## **Objective**

To focus on requirement and importance of grain and grain storage, to understand the role of stored grain pests and to acquaint with various stored grain pest management techniques for avoiding losses in storage.

## **Theory**

#### UNIT I

Introduction, history of storage entomology, concepts of storage entomology and significance of insect pests. Post-harvest losses *in toto visà-vis* total production of food grains in India. Scientific and socio-economic factors responsible for grain losses.

#### **UNIT II**

Important pests namely insects, mites, rodents, birds and microorganisms associated with stored grain and field conditions including agricultural products; traditional storage structures; association of stored grain insects with fungi and mites, their systematic position, identification, distribution, host range, biology, nature and extent of damage, role of field and cross infestations and natural enemies, type of losses in stored grains and their effect on quality including biochemical changes.

#### UNIT III

Ecology of insect pests of stored commodities/grains with special emphasis on role of moisture, temperature and humidity in safe storage of food grains and commodities. Stored grain deterioration process, physical and biochemical changes and consequences. Grain storage- types of storage structures i.e., traditional, improved and modern storage structures in current usage. Ideal seeds and commodities' storage conditions.

#### **UNIT IV**

Important rodent pests associated with stored grains and their non-chemical and chemical control including fumigation of rat burrows. Role of bird pests and their management. Control of infestation by insect pests, mites and microorganisms. Preventive measures- Hygiene/sanitation, disinfestations of stores/receptacles, legal methods. Curative measures-Non-chemical control measures- ecological, mechanical, physical, cultural, biological and engineering. Chemical control-prophylactic and curative- Characteristics of pesticides, their use and precautions in their handling with special emphasis on fumigants. Integrated approaches to stored grain pest management.

#### **Practical**

Collection, identification and familiarization with the stored grains/seed insect pests and nature of damage caused by them; detection of insect infestation in stored food grains; estimation of losses in stored food grains; determination of moisture content in stored food grains; familiarization of storage structures, demonstration of preventive and curative measures including fumigation techniques; treatment of packing materials and their effect on seed quality. Field visits to save grain campaign, central warehouse and FCI warehouses and institutions engaged in research or practice of grain storage like CFTRI, IGSMRI, Hapur etc. (only where logistically feasible).

#### **Suggesting Readings**

# ENT 514/ INSECT VECTORS OF PLANT VIRUSES AND 1+1 PL.PATH 514 OTHER PATHOGENS

#### **Objective**

To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases.

## **Theory**

UNIT I

History of developments in the area of insects as vectors of plant pathogens. Important insect vectors and their characteristics; mouth parts and feeding processes of important insect vectors. Efficiency of transmission. (to be taught by Entomologist)

UNIT II

Transmission of plant viruses and fungal pathogens. Relation between viruses and their vectors. (unit II to V to be taught by Pl.Pathologist)

UNIT III

Transmission of plant viruses by aphids, whiteflies, mealy bugs and thrips. UNIT IV

Transmission of mycoplasma and bacteria by leaf hoppers and plant hoppers. UNIT V

Transmission of plant viruses by psyllids, beetles and mites. Epidemiology and management of insect transmitted diseases through vector management.

#### **Practical**

Identification of common vectors of plant pathogens- aphids, leafhoppers, whiteflies, thrips, beetles, nematodes; culturing and handling of vectors; (to be taught by Entomologist) demonstration of virus transmission through vectors- aphids, leafhoppers and whiteflies. (to be taught by Pl.Pathologist)

#### **ENT 515**

#### GENERAL ACAROLOGY

1+1

## **Objective**

To aquaint the students with external morphology of different groups of mites, train in identification of commonly occurring families of plant associated mites, provide information about important mite pests of crops and their management.

## **Theory**

UNIT I

History of Acarology; importance of mites as a group; habitat, collection and preservation of mites.

**UNIT II** 

Introduction to morphology and biology of mites and ticks. Broad classificationmajor orders and important families of Acari including diagnostic characteristics.

UNIT III

Economic importance, seasonal occurrence, nature of damage, host range of mite pests of different crops, mite pests in polyhouses, mite pests of stored products and honeybees. Management of mites using acaricides, phytoseiid predators, fungal pathogens *etc*. Culturing of phytophagous, parasitic and predatory mites.

#### **Practical**

Collection of mites from plants, soil and animals; extraction of mites from soil, plants and stored products; preparation of mounting media and slide mounts; external morphology of mites; identification of mites up to family level using keys; studying different rearing techniques for mites.

## **Suggested Readings**

## ENT 516 SOIL ARTHROPODS AND THEIR MANAGEMENT 1+1

#### **Objective**

To impart knowledge about the different groups of arthropods found in soil, interaction between the different groups, and role of soil arthropods in humus formation. Hands-on training in sampling and identification of different groups of soil arthropods.

## **Theory**

UNIT I

Soil arthropods and their classification, habitats and their identification.

**UNIT II** 

Estimation of populations; sampling and extraction methods.

**UNIT III** 

Role of soil arthropods in detritus feeding, litter breakdown and humus formation. Soil arthropods as bio-indicators of habitat qualities. Effect of soil arthropod activity on soil properties.

**UNIT IV** 

Harmful and beneficial soil arthropods and their management, interrelationship among arthropods and other soil invertebrates and soil microorganisms. Anthropogenic effects on soil arthropods.

#### **Practical**

Sampling, extraction methods and identification of various types of soil fauna; estimation and assessment of soil arthropod population; techniques and culturing soil invertebrates.

## **Suggested Readings**

Anderson JM & Ingram JSI. 1993. *Tropical Soil Biology and Fertility: A Handbook of Methods*. CABI, London.

## ENT 517 VERTEBRATE PEST MANAGEMENT 1+1

## **Objective**

To impart knowledge on vertebrate pests like birds, rodents, mammals etc., of different crops, their biology, damage they cause and management strategies.

UNIT I

Vertebrate pests of different crops; biology of vertebrate pests such as rodents, birds and other mammals. Biology of beneficial birds.

**UNIT II** 

Population dynamics and assessment, patterns of pest damage and assessment, roosting and nesting systems in birds.

**UNIT III** 

Management strategies- physical (trapping, acoustics and visual), chemical (poisons, repellents, fumigants and anticoagulants), biological (predators, parasites), cropping practices, alteration of habitats, diversion baiting and other eco-friendly methods- Operational practices- baiting, bioassays (LD50 studies), equipments and educative programmes. Wild Life Protection Act(1972) and its amendments.

#### **Practical**

Identification of important rodent and other vertebrate pests of agriculture, food preference and hoarding, social behaviour, damage assessment, field survey, population estimation, control operation and preventive methods.

## **Suggested Readings**

Fitzwater WD & Prakash I. 1989. *Handbook of Vertebrate Pest Control*. ICAR, New Delhi.

Ali S. 1965. *The Book of Indian Birds*. The Bombay Natural History Society, Bombay.

## ENT 518 TECHNIQUES IN PLANT PROTECTION 0+1

## **Objective**

To acquaint the students with appropriate use of plant protection equipments and techniques related to microscopoy, computation, pest forecasting, electrophoresis etc.

## **Theory**

UNIT I

Pest control equipments, principles, operation, maintenance, selection, application of pesticides and biocontrol agents, seed dressing, soaking, root-dip treatment, dusting, spraying, application through irrigation water.

UNIT II

Soil sterilization, solarization, deep ploughing, flooding, techniques to check the spread of pests through seed, bulbs, corms, cuttings and cut flowers.

UNIT III

Use of light, transmission and scanning electron microscopy.

**UNIT IV** 

Protein isolation from the pest and host plant and its quantification using ectrophotometer and molecular weight determination using SDS/PAGE.

UNIT V

Use of tissue culture techniques in plant protection. Computer application for predicting/forecasting pest attack and identification.

## **Suggested Readings**

Alford DV. 1999. A Textbook of Agricultural Entomology. Blackwell Science, London.

Crampton JM & Eggleston P. 1992. *Insect Molecular Science*. Academic Press, London.

#### ENT 519 COMMERCIAL ENTOMOLOGY

1+1

## **Objective**

To familiarize the students with entrepreneurial opportunities in entomology, provide information on productive insects and their products, as well as insect pests of public health and veterinary importance and their management.

## **Theory**

UNIT I

Bee keeping- General colony management during different seasons. Seasonal management. Managing colonies for honey production and pollination. Artificial queen rearing. Pests and diseases of honey bees. Bee poisoning. Production and marketing of quality honey and value added honey products. Establishment and maintenance of apiaries.

**UNIT II** 

Study of different species of silkworms, characteristic features, moriculture, silk and its uses, pests and diseases of silkworms, rearing and management of silkworms. Lac insect- natural enemies and their management.

**UNIT III** 

Economic and public health importance of insect pests in human habitation and habitats, biology, damage and control of mosquitoes, houseflies, bed bugs, ants, termites, cockroaches, flies, silverfish, head and body lice, carpet beetles, cloth moths, crickets, wasps, house dust mites, insect pests of cattle, poultry, pet animals and their anagement.

**UNIT IV** 

Principles and methods of pest management in residential places and public buildings, insecticides for domestic use and their safety, pre- and postconstruction termite proofing of buildings, appliances for domestic pest control. Rodent control methods. Organic methods of domestic pest management.

## **Practical**

Assessing pest status in dwellings (labs, canteen or hostel), implementation of pest control against flies, mosquitoes, bed bugs, cockroaches and rodents. Pre- and post-construction termite proofing methods, control of silverfishes in the library. Visit to poultry units and assessing pest status in poultries. Evaluation of commercially available domestic insect pest control products through bioassays. Identification of honey bee species, bee castes and special adaptations, identification and handling of bee-keeping equipments. Handling of honey bees-hive and frame inspection. Honey extraction and processing methods of hive products extraction. Preparation of bee-keeping projects for funding. Visit to bee nursery and commercial apiaries. Silkworm rearing and management. Lac host and crop management technology and processing of lac. Products and bye-products of lac.

Singh S. 1975. Beekeeping in India. ICAR, New Delhi.

ENT 520/ PL.PATH 520 / NEMA 514

## PLANT QUARANTINE

2+0

## **Objective**

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

## **Theory**

UNIT I

Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine – domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/diseases and their status.

**UNIT II** 

Plant protection organization in India. Acts related to registration of pesticides and transgenics. History of quarantine legislations, PQ Order 2003. Environmental Acts, APEDA, Import and Export of bio-control agents.

**UNIT III** 

Identification of pest/disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis and other techniques to detect pest/pathogen infestations; VHT and other safer techniques of disinfestations /salvaging of infected material.

**UNIT IV** 

WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; Sanitary and Phytosanitary measures.

## **Suggested Readings**

Rajeev K & Mukherjee RC. 1996. Role of Plant Quarantine in IPM. Aditya Books.

Rhower GG. 1991. Regulatory Plant Pest Management. In: *Handbook of Pest Management in Agriculture*. 2nd Ed. Vol. II. (Ed. David Pimental). CRC Press.

## ENT 601 ADVANCED INSECT SYSTEMATICS 1+2

## **Objective**

To familiarize the students with different schools of classification, phylogenetics, classical and molecular methods, evolution of different groups of insects. International Code of Zoological Nomenclature. Ethics and procedure for taxonomic publications.

UNIT I

Detailed study of three schools of classification- numerical, evolutionary and cladistics. Methodologies employed. Development of phenograms, cladograms, molecular approaches for the classification of organisms. Methods in identification of homology. Species concepts and peciation processes and evidences. Zoogeography.

**UNIT II** 

Study of different views on the evolution of insects- alternative phylogenies of insects: Kukalova Peck and Kristensen. Fossil insects and evolution of insect diversity over geological times.

**UNIT III** 

Detailed study of International Code of Zoological Nomenclature, including appendices to ICZN- Ethics.

**UNIT IV** 

Concept of Phylocode and alternative naming systems for animals. A detailed study of selected representatives of taxonomic publications – small publications of species descriptions, revisionary works, monographs, check lists, faunal volumes, etc. Websites related to insect taxonomy and databases. Molecular Taxonomy, barcoding species.

#### **Practical**

Collection, curation and study of one taxon of insects- literature search, compilation of a checklist, study of characters, development of character table, construction of taxonomic keys for the selected group. Development of descriptions, photographing, writing , and preparation of specimens for "type like" preservation. Submission of the collections made of the group. Multivariate Analysis techniques for clustering specimens into different taxa, and development of phenograms. Rooting and character polarisation for developing cladograms and use of computer programmes to develop cladograms.

## **Objective**

To impart knowledge on morphology of immature stages of different groups of insects. Train students in identification of common pest species during their immature stages.

#### **Theory**

UNIT I

Types of immature stages in insect orders, morphology of egg, nymph/larva and pupa, identification of different immature stages of crop pests and stored product insects

**UNIT II** 

Comparative study of life history strategies in hemi-metabola and holometabola, immature stages as ecological and evolutionary adaptations, significance of immature stages for pest management.

#### **Practical**

Types of immature stages; their collection, rearing and preservation. Identification of immature insects to orders and families, in endopterygote orders viz., Diptera, Lepidoptera, Hymenoptera and Coleoptera using key.

## **Suggested Readings**

Chu HF. 1992. *How to Know Immature Insects*. William Brown Publ., Iowa. Peterson A. 1962. *Larvae of Insects*. Ohio University Press, Ohio. Stehr FW. 1998. *Immature Insects*. Vols. I, II. Kendall Hunt Publ., Iowa.

## ENT 603 ADVANCED INSECT PHYSIOLOGY

2+0

## **Objective**

To impart knowledge to the students on detailed physiology of various secretory and excretory systems, moulting process, chitin synthesis, physiology of digestion, transmission of nerve impulses, nutrition of insects, pheromones etc.

## **Theory**

UNIT I

Physiology and biochemistry of insect cuticle and moulting process. Biosynthesis of chitin, chitin-protein interactions in various cuticles, types of sclerotization.

UNIT II

Digestive enzymes, digestive physiology in phytophagous, wood boring and wool feeding insects, efficiency of digestion and absorption, role of endosymbionts in insect nutrition, nutritional effects on growth and development; physiology of excretion and osmoregulation, water conservation mechanisms.

UNIT III

Detailed physiology of nervous system, transmission of nerve impulses, neurotransmitters and modulators. Production of receptor potentials in different types of sensilla, pheromones and other semiochemicals in insect life, toxins and defense mechanisms.

**UNIT IV** 

Endocrine system and insect hormones, physiology of insect growth and development- metamorphosis, polyphenism and diapause. Energetics of muscle contractions.

## **Suggested Readings**

Kerkut GA & Gilbert LI. 1985. *Insect Physiology, Biochemistry and Pharmacology*. Vols. I- XIII. Pergamon Press, Oxford, New York.

Muraleedharan K. 1997. *Recent Advances in Insect Endocrinology*. Assoc. for Advancement of Entomology, Trivandrum, Kerala.

#### ENT 604 ADVANCED INSECT ECOLOGY

1+1

## **Objective**

To impart advanced practical knowledge of causal factors governing the distribution and abundance of insects and the evolution of ecological characteristics.

## **Theory**

#### UNIT I

Characterisation of distribution of insects- Indices of Dispersion, Taylor's Power law. Island Biogeography. Population dynamics- Life tables, Leslie Matrix, Stable age distribution, Population projections. Predator-Prey Models- Lotka-Volterra and Nicholson-Bailey Model. Crop Modeling- an introduction.

#### **UNIT II**

Insect Plant Interactions. Fig-figwasp mutualism and a quantitative view of types of Associations. Role of insects in the environment. Adaptations to terrestrial habitats. Evolution of Insect diversity and role of phytophagy as an adaptive zone for increased diversity of insects. Evolution of resource harvesting organs, resilience of insect taxa and the sustenance of insect diversity- role of plants. Herbivory, pollination, predation, parasitism. Modes of insect-plant interaction, tri-trophic interactions. Evolution of herbivory, monophagy vs polyphagy. Role of plant secondary metabolites. Host seeking behaviour of parasitoids. Meaning of stress- plant stress and herbivory. Consequences of herbivory to plant fitness and response to stress. Constitutive and induced plant defenses.

#### UNIT III

Biodiversity and Conservation- RET species, Ecological Indicators. Principles of Population genetics, Hardy Weinberg Law, Computation of Allelic and Phenotypic frequencies, Fitness under selection, Rates of Evolution under selection. Foraging Ecology- Optimal foraging theory, Marginal Value Theorem, and Patch departure rules, central place foraging, Mean-variance relationship and foraging by pollinators, Nutritional Ecology.

#### **UNIT IV**

Reproductive ecology- Sexual selection, Mating systems, Reproductive strategies - timing, egg number, reproductive effort, sibling rivalry and parent-offspring conflict. Agro- ecological vs Natural Ecosystems – Characterisation, Pest Control as applied ecology- case studies.

#### **Practical**

Methods of data collection under field conditions. Assessment of distribution parameters, Taylor's power law, Iwao's patchiness index, Index of Dispersion, etc. Calculation of sample sizes by different methods. Fitting Poisson and Negative Binomial distributions and working out the data transformation methods. Hardy-Weinberg Law, Computation of Allelic and Phenotypic Frequencies - Calculation of changes under selection, Demonstration of genetic drift. Assessment of Patch Departure rules. Assessment of Resource size by female insects using a suitable insect model, fruit flies/Goniozus/Female Bruchids etc.- A test of reproductive effort and fitness. Construction of Life

tables and application of Leslie Matrix – population projections, Stable age distribution. Exercises in development of Algorithms for crop modeling.

#### ENT 605

#### INSECT BEHAVIOUR

1+1

## **Objective**

To acquaint the students with a thorough understanding of how natural selection has led to various survival strategies manifested as behaviour in insects.

## **Theory**

## UNIT I

Defining Behaviour- Concept of umwelt, instinct, fixed action patterns, imprinting, complex behaviour, inducted behaviour, learnt behaviour and motivation. History of Ethology- development of behaviorism and ethology, contribution of Darwin, Frisch, Tinbergen and Lorenz; Studying behaviour-Proximate and Ultimate approaches, behavioural traits under natural selection, genetic control of behaviour and behavioural polymorphism.

#### **UNIT II**

Orientation- Forms of primary and secondary orientation including taxes and kinesis; Communication- primary and secondary orientation, responses to environmental stimuli, role of visual, olfactory and auditory signals in inter- and intra-specific communication, use of signals in defense, mimicry, polyphenism; evolution of signals.

#### **UNIT III**

Reproductive behaviour- mate finding, courtship, territoriality, parental care, parental investment, sexual selection and evolution of sex ratios; Social

behaviour- kin selection, parental manipulation and mutualism; Selforganization and insect behaviour.

**UNIT IV** 

Foraging- Role of different signals in host searching (plant and insects) and host acceptance, ovipositional behaviour, pollination behaviour, coevolution of plants and insect pollinators. Behaviour in IPM- Concept of super-normal stimuli and behavioural manipulation as potential tool in pest management, use of semiochemicals, auditory stimuli and visual signals in pest management.

#### **Practical**

Quantitative methods in sampling behaviour; training bees to artificial feeders; sensory adaptation and habituation in a fly or butterfly model, physical cues used in host selection in a phytophagous insect, chemical and odour cues in host selection in phytophagous insect (DBM or gram pod borer), colour discrimination in honey bee or butterfly model, learning and memory in bees, role of self-organization in resource tracking by honeybees. Evaluation of different types of traps against fruit flies with respect to signals; Use of honey bees/Helicoverpa armigera to understand behavioural polymorphism with respect to learning and response to pheromone mixtures, respectively.

## ENT 606 RECENT TRENDS IN BIOLOGICAL CONTROL

1+1

## Objective

To appraise the students with advanced techniques in handling of different bioagents, modern methods of biological control and scope in cropping system-based pest management in agro-ecosystems.

#### **Theory**

UNIT I

Scope of classical biological control and augmentative biocontrol; introduction and handling of natural enemies; nutrition of entomophagous insects and their hosts, dynamics of biocontrol agents *vis-à-vis* target pest populations.

UNIT II

Mass culturing techniques, insectary facilities and equipments, basic standards of insectary, viable mass-production unit, designs, precautions, good insectary practices.

**UNIT III** 

Colonization, techniques of release of natural enemies, recovery evaluation, conservation and augmentation of natural enemies, survivorship analysis and

ecological manipulations, large-scale production of biocontrol agents, bankable project preparation.

**UNIT IV** 

Scope of genetically engineered microbes and parasitoids in biological control, genetics of ideal traits in biocontrol agents for introgressing and for progeny selections, breeding techniques of biocontrol agents.

#### **Practical**

Mass rearing and release of some commonly occurring indigenous natural enemies; assessment of role of natural enemies in reducing pest populations; testing side effects of pesticides on natural enemies; effect of semiochemicals on natural enemies, breeding of various biocontrol agents, performance of efficiency analyses on target pests; project document preparation for establishing a viable mass-production unit /insectary.

### ENT 607 ADVANCED INSECTICIDE TOXICOLOGY

2+1

## **Objective**

To acquaint the students with the latest advancements in the field of insecticide toxicology, biochemical and physiological target sites of insecticides, and pesticide resistance mechanisms in insects.

## **Theory**

UNIT I

Penetration and distribution of insecticides in insect systems; insecticide selectivity; factors affecting toxicity of insecticides.

**UNIT II** 

Biochemical and physiological target sites of insecticides in insects; developments in biorationals, biopesticides and newer molecules; their modes of action and structural – activity relationships; advances in metabolism of insecticides.

**UNIT III** 

Joint action of insecticides; activation, synergism and potentiation.

**UNIT IV** 

Problems associated with pesticide use in agriculture: pesticide resistance resistance mechanisms and resistant management strategies; pest resurgence and outbreaks; persistence and pollution; health hazards and other side effects.

UNIT V

Estimation of insecticidal residues- sampling, extraction, clean-up and estimation by various methods; maximum residue limits (MRLs) and their fixation; good agricultural practices to minimize insecticidal hazards.

#### **Practical**

Sampling, extraction, clean-up and estimation of insecticide residues by various methods; calculations and interpretation of data; biochemical and biological techniques for detection of insecticide resistance in insects.

## **Suggested Readings**

## ENT 608 ADVANCED HOST PLANT RESISTANCE 1+1

## **Objective**

To familiarize the students with recent advances in resistance of plants to insects and acquaint with the techniques for assessment and evaluation of resistance in crop plants.

#### **Theory**

#### UNIT I

Importance of plant resistance, historical perspective, desirable morphological, anatomical and biochemical adaptations of resistance; assembly of plant species - gene pool; insect sources – behaviour in relation to host plant factors.

#### UNIT II

Physical and chemical environment conferring resistance in plants, role of trypsin inhibitors and protease inhibitors in plant resistance; biochemistry of induced resistance – signal transduction pathways, methyl jasmonate pathways, polyphenol oxidase pathways, salicylic acid pathways; effects of induced resistance; exogenous application of elicitors.

#### **UNIT III**

Biotechnological approaches in host plant resistance- genetic manipulation of secondary plant substances; incorporation of resistant gene in crop varieties; marker-aided selection in resistance breeding.

#### **UNIT IV**

Estimation of plant resistance based on plant damage- screening and damage rating; evaluation based on insect responses; techniques and determination of categories of plant resistance; breakdown of resistance in crop varieties.

## **Practical**

Understanding mechanisms of resistance for orientation, feeding, oviposition *etc.*, allelochemical bases of insect resistance; macroculturing of test insects like aphids, leaf/plant hoppers, mites and stored grain pests; field screening-

microplot techniques, infester row technique, spreader row technique and plant nurseries; determination of antixenosis index, antibiosis index, tolerance index, plant resistance index.

## **Suggested Readings**

Panda N. 1979. *Principles of Host Plant Resistance to Insects*. Allenheld, Osum & Co., New York.

Smith CM, Khan ZR & Pathak MD. 1994. *Techniques for Evaluating Insect Resistance in Crop Plants*. CRC Press, Boca Raton, Florida.

#### ENT 609

#### ADVANCED ACAROLOGY

1+1

### **Objective**

To acquire a good working knowledge of identification of economically important groups of mites up to the species level, a detailed understanding of the newer acaricide molecules and utilization of predators.

## **Theory**

UNIT I

Comparative morphology of Acari, phylogeny of higher categories in mites, knowledge of commonly occurring orders and families of Acari in India. Diagnostic characteristics of commonly occurring species from families Tetranychidae, Tenuipalpidae, Eriophyidae, Tarsonemidae, Phytoseiidae, Bdellidae, Cunaxidae, Stigmaeidae, Pymotidae, Cheyletidae, Acaridae,

Pyroglyphidae, Orthogalumnidae, Argasidae, Ixodidae, Sarcoptidae. Soil mites in India.

**UNIT II** 

Management of economical important species of mites in agriculture,

veterinary and public health; storage acarology.

**UNIT III** 

Mites as vectors of plant pathogens; mode of action, structure-activity relationships of different groups of acaricides; problem of pesticide resistance in mites, resurgence of mites.

**UNIT IV** 

Predatory mites, their mass production and utilization in managing mite pests, acaropathogenic fungi- identification, isolation and utilization.

#### **Practical**

Identification of commonly occurring mites up to species, preparation of keys for identification. Collection of specific groups of mites and preparing their identification keys. Rearing phytoseiid mites and studying their role in suppression of spider mites. Management of mite pests of crops using acaricides, phytoseiid predators, fungal pathogens *etc*.

## **Suggested Readings**

Krantz GW. 1970. *A Manual of Acarology*. Oregon State University Book Stores, Corvallis, Oregon.

#### ENT 610 AGRICULTURAL ORNITHOLOGY 1+1

## **Objective**

To expose the students to the prevalence of birds in agricultural fields, their habitat associations and the beneficial and harmful role played by birds in crop fields and management of pest situations.

## **Theory**

#### UNIT I

Status of agricultural ornithology in India, groups of birds associated with agroecosystems. Habitat associations of birds in both wet and dry agricultural systems. Association of birds with different cultivation practices and crop stages, their seasonality and succession. Pestiferous and beneficial birds associated with different crops, their general biology and ecology. Food and feeding habits of birds in crop fields.

#### UNIT II

Nature of damage caused by birds in different crops. Foraging ecology of birds in agricultural fields. Birds affecting stored grains in houses and godowns. Beneficial role of birds in agriculture and attracting them to field. Use of bird excreta in agriculture. Management of bird pests in agriculture: physical, cultural, ecological and chemical methods. Wild Life Protection Act(1972).

#### **Practical**

Study of different groups of birds associated with agriculture, their morphology and field identification. Field visits to different agroecosystems. Study of bird associations with different crop stages. Study of nesting and roosting habits of birds in agricultural habitats. Study of the feeding habits, nature and types of damage caused by birds in selected crops. Visits to godowns. Analysis and study of the use of bird excreta in agriculture at a bird sanctuary. Field visits to paddy growing command areas to study birds in crop fields. Assignments on assessing bird damage, estimation of populations etc.

## **Suggested Readings**

## ENT 611 MOLECULAR APPROACHES IN ENTOMOLOGICAL 1+1 RESEARCH

## **Objective**

To familiarize the students with DNA recombitant technology, marker genes, transgenic plants, biotechnology in sericulture and apiculture.

## **Theory**

#### UNIT I

Introduction to molecular biology; techniques used in molecular biology.

#### **UNIT II**

DNA and RNA analysis in insects- transcription and translocation mechanisms. DNA recombinant technology, identification of genes/nucleotide sequences for characters of interest. Genetic improvement of natural enemies. Cell lines, genetic engineering in baculoviruses, *Bt* and entomopathogenic fungi.

#### **UNIT III**

Genes of interest in entomological research- marker genes for sex identification, neuropeptides, JH esterase, St toxins and venoms, chitinase, CPTI; lectins and proteases. Peptides and neuropeptides, JH esterase, St toxins and venoms, chitinase, Bt toxin, CPTI; trypsin inhibitors, lectins and proteases, neuropeptides. Transgenic plants for pest resistance and diseases.

#### **UNIT IV**

Insect gene transformation; biotechnology in relation to silkworms and honey bees; introduction of lectin genes for pest suppression; DNA finger printing for taxonomy and phylogeny. Genetic improvement of inebriate tolerance of natural enemies.

#### **UNIT V**

DNA-based diagnostics; insect immune systems in comparison to vertebrates; molecular basis of metamorphosis; Sf transgenic technology and implications; molecular biology of baculoviruses; insecticide resistance. Resistance management strategies in transgenic crops.

#### **Practical**

Isolation of DNA/RNA; purity determinations; base pair estimation; agarose gel electrophoresis; restriction mapping of DNA; demonstration of PCR, RFLP and RAPD techniques.

#### ENT 612 ADVANCED INTEGRATED PEST MANAGEMENT 2+0

## **Objective**

To acquaint the students with recent concepts of integrated pest management. Surviellance and data base management. Successful national and international case histories of integrated pest management, non conventional tools in pest management.

#### **Theory**

#### UNIT I

Principles of sampling and surveillance; database management and computer programming, simulation techniques and system analysis and modeling.

#### **UNIT II**

Case histories of national and international programmes, their implementation, adoption and criticisms, global trade and risk of invasive pests. Wilde Area Management of Insect Posts.

## **UNIT III**

Genetic engineering and new technologies- their progress and limitations in IPM programmes, deployment of benevolent alien genes for pest management- case studies; scope and limitations of bio-intensive and ecological based IPM programmes. Application of IPM to farmers' real-time situations.

#### **UNIT IV**

Challenges, needs and future outlook; dynamism of IPM under changing cropping systems and climate; insect pest management under protected cultivation; strategies for pesticide resistance management.

### **Suggested Readings**

## ENT 613/ PL PATH 606

## PLANT BIOSECURITY AND BIOSAFETY

## 2+0

#### **Objective**

To facilitate deeper understanding on plant biosecurity and biosafety issues in agriculture.

## **Theory**

#### UNIT I

History of biosecurity, Concept of biosecurity, Components of biosecurity, Quarantine, Invasive Alien Species, Biowarfare, Emerging/resurgence of pests and diseases.

UNIT II

National Regulatory Mechanism and International Agreements/ Conventions viz., Agreement on Application of Sanitary and Phytosanitary (SPS)

Measures/World Trade Organization (WTO), Convention on Biological Diversity (CBD), International Standards for Phytosanitary Measures, pest risk analysis, risk assessment models, pest information system, early warning and forecasting system, use of Global Positioning System (GPS) and Geographic Information System (GIS) for plant biosecurity, pest/disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity. UNIT III

Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, Issues related to release of genetically modified crops.

## **NEMATOLOGY** Course Contents

## NEMA 501 PRINCIPLES OF NEMATOLOGY

2+1

## **Objective**

To project the importance of nematodes in agriculture and impart basic knowledge on all aspects of plant nematology.

## Theory

#### UNIT I

History and growth of Nematology; nematode habitats and diversity- plant, animal and human parasites; useful nematodes; economic importance of nematodes to agriculture, horticulture and forestry.

## UNIT II

Gross morphology of plant parasitic nematodes; broad classification, nematode biology, physiology and ecology.

### UNIT III

Types of parasitism; nature of damage and general symptomatology; interaction of plant parasitic nematodes with other organisms.

#### UNIT IV

Plant nematode relationships, cellular responses to infection by important phytonematodes; physiological specialization among phytonematodes.

#### UNIT V

Principles and practices of nematode management; integrated nematode management.

#### **Practical**

Studies on kinds of nematodes- free-living, animal, insect and plant parasites; nematode sampling and extraction from soil; extraction of migratory endoparasites, staining for sedentary endoparasites; examination of different life stages of important plant parasitic nematodes, their symptoms and histopathology.

## **Suggested Readings**

Dropkin VH. 1980. *An Introduction to Plant Nematology*. John Wiley & Sons, New York.

Perry RN & Moens M. 2006. Plant Nematology. CABI, London.

Singh RS & Sitaramaiah K. 1994. *Plant Pathogens – Nematodes*. Oxford & IBH, New Delhi.

Thorne G. 1961. Principles of Nematology. McGraw Hill, New Delhi.

Walia RK & Bajaj HK. 2003. Text Book on Introductory Plant Nematology. ICAR, New Delhi.

## NEM 502/ ENT 503

## PRINCIPLES OF TAXONOMY

2+0

#### Obiective

To sensitize the students on the theory and practice of classifying organisms and the rules governing the same.

## **Theory**

## UNIT I

Introduction to history and principles of systematics and importance. Levels and functions of systematics. Identification, purpose, methods-character matrix, taxonomic keys. Descriptions- subjects of descriptions, characters, nature of characters, analogy vs homology, parallel vs convergent evolution, intraspecific variation in characters, polythetic and polymorphic taxa, sexual dimorphism.

#### **UNIT II**

Classification of animals: Schools of classification- Phenetics, Cladistics and Evolutionary classification. Components of Biological Classification: Hierarchy, Rank, Category and Taxon. Species concepts, cryptic, sibling and etho-species, infra-specific categories. Introduction to numerical, biological and cytogenetical taxonomy.

### **UNIT III**

Nomenclature: Common vs Scientific names. International Code of Zoological Nomenclature, criteria for availability of names, validity of names. Categories of names under consideration of ICZN. Publications, Principles of priority, and homonymy, synonymy, type concept in zoological nomenclature. Speciation, anagenesis vs cladogenesis, allopatric, sympatric and parapatric processes.

## **Suggested Readings**

Blackwelder RE. 1967. *Taxonomy - A Text and Reference Book*. John Wiley & Sons, New York.

Kapoor VC. 1983. *Theory and Practice in Animal Taxonomy*. Oxford & IBH, New Delhi.

Quicke DLJ. 1993. *Principles and Techniques of Contemporary Taxonomy*. Blackie, London.

## NEMA 503 STRUCTURAL AND FUNCTIONAL ORGANIZATION OF NEMATODES

## **Objective**

Familiarization with structural organization of nematode body so as to enable the students to understand biology, physiology and classification of nematodes.

## **Theory**

#### UNIT I

Introduction and general organization of nematode body.

#### <u>Unit II</u>

Morphology and anatomy of nematode cuticle, hypodermis, musculature and pseudocoelom.

#### **UNIT III**

Digestive system- structural variations of stoma, oesophagus, intestine and rectum in nematodes.

## UNIT IV

Reproductive system- terminology and variations in female and male reproductive systems, nemic eggs and sperms, types of reproduction, spermatogenesis and oogenesis.

#### UNIT V

Types and structure of excretory-secretory systems; nervous system and associated sense organs.

2+1

#### **Practical**

Studies on variations in nematode shapes and sizes, morphological details of cuticle, cuticular markings and ornamentation, variations in stoma, oesophagus, rectum; types and parts of female and male reproductive systems, sense organs, and excretory system.

## **Suggested Readings**

Bird AF & Bird J. 1991. *The Structure of Nematodes*. Academic Press, New York.

## NEMA 504 CLASSIFICATION OF NEMATODES 2+1

## **Objective**

Development of skills in the identification of plant parasitic nematodes up to genera and species levels.

## **Theory**

#### UNIT I

Principles of nematode systematics.

#### UNIT II

Placement of nematodes in Animal Kingdom and comparison with related organisms.

## UNIT III

Classification of Phylum Nematoda- Orders of Class Adenophorea and Secernentea; Diagnosis of Order Tylenchida- Suborder Tylenchina, Hoplolaimina and Criconematina; Infraorders Tylenchata and Anguinatatheir families and genera.

#### UNIT IV

Diagnosis of genera and families of Suborders Hoplolaimina and Criconematina.

## UNIT V

Orders Aphelenchida, Dorylaimida, Enoplida, Rhabditida with emphasis on economically important taxa.

#### **Practical**

Identification of common plant parasitic nematodes belonging to Orders Tylenchida, Dorylaimida, Aphelenchida and Enoplida up to generic level; and up to species level for major nematode pests (root-knot, cyst nematodes etc.) of crops. Identification of EPNs belonging to Order Rhabditida.

## **Suggested Readings**

DeCramer W. 1995. *The Family Trichodoridae: Stubby Root and Virus Vector Nematodes*. Kluwer Academic Press, Dordrecht.

Geraert E. 2006. Tylenchida. Brill.

Hunt DJ. 1993. Aphelenchida, Longidoridae and Trichodoridae – their Systematics and Bionomics. CABI, Wallingford.

Siddiqi MR. 2000. *Tylenchida: Parasites of Plants and Insects*. 2<sup>nd</sup> Ed. CABI, Wallingford.

## **Objective**

Understanding the principles, theoretical aspects and developing skills in nematological techniques.

## **Theory**

#### UNIT I

Principles and use of light, scanning and transmission electron microscopes, and other laboratory equipments.

#### UNIT II

Survey and surveillance methods; collection of soil and plant samples; techniques for extraction of nematodes from soil and plant material; estimation of population densities.

## **UNIT III**

Killing, fixing, clearing and mounting nematodes; measurements, preparation of perineal patterns, vulval cones of cyst nematodes, en-face views and body section of nematodes.

#### UNIT IV

*In vitro* and *in vivo* culturing techniques of plant parasitic, bacteriophagous, mycophagus and omnivorous nematodes.

#### UNIT V

Staining nematodes in plant tissues; microtomy for histopathological studies; collection of plant root exudates and their bioassay; preparation of plant materials for exhibition.

## UNIT VI

Application of molecular techniques in Nematology.

#### **Practical**

Collection of soil and plant samples; extraction of nematodes from soil by Baermann funnel, sieving and decanting, elutriation and sugar centrifugal methods; extraction of cysts from soil; extraction of nematodes from plant material; estimation of population densities; staining plant material for nematodes; killing and fixing nematodes, clearing nematodes by slow and Seinhorst's methods; preparation of temporary and permanent mounts; measurements, drawing, microphotography, special preparation of nematodes - perineal patterns, vulval cones, en-face and body sections; collection of root exudates, preparation of exhibits of nematode diseased plant material, *in vitro* culturing techniques of nematodes- callous culture, excised root and carrot disc techniques.

## **Suggested Readings**

Ayoub SM. 1981. Plant Nematology – An Agricultural Training Aid. NemaAid Publications.

Barker KR, Carter CC & Sasser JN 1985. An Advanced Treatise on Meloidogyne. Vol. II. Methodology. International Meloidogyne Project, NCSU, Raliegh.

Southey JF. 1986. Laboratory Methods for Work with Plant and Soil Nematodes. HMSO, London.

Zuckerman BM, Mai WF & Harrison MB. 1985. *Plant Nematology Laboratory Manual*. Univ. of Massachusetts.

## **Objective**

To impart basic knowledge about the causal organism, nature of damage, symptoms and control of nematode diseases of agricultural and horticultural crops.

## Theory

Diagnosis of causal organism, distribution, host range, biology and life cycle, nature of damage, symptoms, interaction with other organisms, and management of nematode diseases in different crops.

#### UNIT I

Cereal crops- Ear-cockle and tundu diseases of wheat, molya disease of wheat and barley; rice root nematode, rice root-knot and cyst nematode problems, ufra and white tip diseases of rice; lesion nematodes, cyst nematodes of maize and sorghum.

#### **UNIT II**

Pulses, Sugar, Fibre, Cash crops (Tobacco, Fennel), Fodder and Oilseed crops- Pigeon pea cyst nematode, root knot nematode, reniform nematode, lesion, lance nematode, sugarbeet cyst and soybean cyst nematode problems.

## UNIT III

Vegetable crops- root-knot disease, reniform nematode, potato cyst nematode; stem and bulb nematode. Nematode problems of protected cultivation.

#### **UNIT IV**

Fruit crops- root-knot disease, reniform nematode, slow decline of citrus. Mushroom- nematode problems.

#### UNIT V

Plantation, medicinal and aromatic crops- burrowing nematode problem of banana, spices and condiments, root-knot and lesion nematode problems of coffee and tea, red ring disease of coconut. Forests- Pine wilt disease.

## **Practical**

Diagnosis of causal organisms; identification of different life cycle stages; study of symptoms and histopathology of nematode damage in different crops, study tours for field diagnosis of nematode problems.

#### **Suggested Readings**

Bhatti DS & Walia RK. 1992. Nematode Pests of Crops. CBS, New Delhi. Evans AAF, Trudgill DL & Webster JM. 1994. Plant Parasitic Nematodes in Temperate Agriculture. CABI, Wallingford.

Perry RN & Moens M. 2006. Plant Nematology. CABI, Wallingford.

## NEMA 507 NEMATODE BIOLOGY AND PHYSIOLOGY 2+1 Objective

To develop understanding of life cycle patterns, feeding and metabolic processes in phytonematodes which have implications in their management.

#### UNIT I

Host finding and invasion, feeding, hatching, moulting; life cycle patterns in different types of nematodes.

## UNIT II

Types of reproduction, gametogenesis, embryogenesis and post embryogenesis.

## UNIT III

Chemical composition of nematodes, hydrolytic enzymes, pseudocoelome and function of transport.

## UNIT IV

Physiology of digestive system, intermediary metabolism.

### UNIT V

Osmoregulation, physiology of excretory-secretory and neuromuscular systems.

#### **Practical**

Studies on embryogenesis and post-embryogenesis, hatching, moulting, life cycle development, feeding, enzymatic assay by electrophoresis.

## **Suggested Readings**

Croll NA. 1970. The Behaviour of Nematodes: The Activity, Senses and Responses. Edward Arnold, London.

## NEMA 508 NEMATODE ECOLOGY

2+1

#### **Objective**

To understand the life of plant parasitic nematodes in their environment; their survival strategies, and how to exploit these for their control.

## Theory

## UNIT I

Definition and scope; components of environment; evolution of nematodes; ecological classification, prevalence, distribution and dispersal of nematodes.

## UNIT II

Role of nematodes in the food web; habitat and niche characteristics; community analysis and population estimation models.

#### UNIT III

Effects of abiotic and biotic factors on nematodes.

#### UNIT IV

Environmental extremes and nematode behaviour- aggregation, swarming, orientation, feeding and reproduction.

#### UNIT IV

Survival strategies of nematodes in adverse environment and absence of host.

#### UNIT V

Modeling population dynamics and relations with crop performance; ecological considerations in nematode management, data interpretation and systems simulation.

#### **Practical**

Study of nematode fauna in varied agro-ecological systems, community analysis of nematode populations, laboratory exercises on influence of abiotic factors on movement and hatching, green-house experiments on effect of abiotic factors on nematode populations and plant growth.

## **Suggested Readings**

Croll NA. 1970. The Behaviour of Nematodes: The Activity, Senses and Responses. Edward Arnold, London.

Wallace HR. 1973. *Nematode Ecology and Plant Disease*. Edward Arnold, London.

## NEMA 509 NEMATODE INTERACTIONS WITH OTHER 2+1 ORGANISMS

## **Objective**

To understand the role of nematodes in disease complexes involving fungal, bacterial, viral and other organisms.

## Theory

#### UNIT I

Concept of interaction and its importance in disease complexes and their management involving nematode and other organisms.

#### UNIT II

Interaction of plant parasitic nematodes with wilt causing fungal pathogens.

#### UNIT III

Interaction of plant parasitic nematodes with root rot and other fungal pathogens.

#### UNIT IV

Interaction of plant parasitic nematodes with bacterial pathogens, other nematode species and arthropods.

## UNIT V

Virus transmission by nematodes.

#### **Practical**

Green-house experiments to study the role of plant parasitic nematodes in wilt/rot causing fungal and bacterial pathogens.

## **Suggested Readings**

Khan MW. 1993. Nemic Interactions. Chapman & Hall, New York.

Lamberti F, Taylor CE & Seinhorst JW. 1975. *Nematode Vectors of Plant Viruses*. Plenum Press, London.

Sasser JN & Jenkins WR. 1960. Nematology: Fundamentals and Recent Advances with Emphasis on Plant Parasitic and Soil Forms. Eurasia Publ. House, New Delhi.

## **Objective**

To impart comprehensive knowledge about the principles and practices of nematode management.

## **Theory**

## UNIT I

Concepts and history of nematode management; crop loss estimation, ecological and socio-economic aspects, cost-benefit ratios and pest risk analysis.

## UNIT II

Chemical methods- nematicides, their types, classification, mode of action, applicators and application methods, antidotes, and economizing nematicidal use.

#### UNIT III

Cultural practices- crop rotations and cropping sequences, fallowing, flooding, soil solarisation, rabbing, time of sowing, organic amendments of soil, bio-fumigation, antagonistic and trap crops, sanitation etc.

Physical methods- use of heat, hot water treatment and other methods of disinfestations of planting material.

#### UNIT IV

Biological methods- concepts and terminology, use of predators and parasites as biological control agents, their mass multiplication and field use; phytotherapeutic methods – use of antagonistic plants and antinemic plant products.

## UNIT V

Genetic methods- plant resistance; legal methods- quarantine regulations; integrated nematode management- concepts and applications.

#### **Practical**

*In vitro* screening of synthetic chemicals and plant products for nematicidal activity, and their application methods; methods for screening of crop germplasm for resistance against nematodes, laboratory exercises on biocontrol potential of fungal, bacterial parasites, and predacious fungi and nematodes.

## **Suggested Readings**

Starr JL, Cook R & Bridge J. 2002. *Plant Resistance to Parasitic Nematodes*. CABI, Wallingford.

Whitehead AG. 1997. Plant Nematode Control. CABI, Wallingford.

## **Objective**

To sensitize about the use of nematodes for the biological control of insect pests of crops, and application of some nematodes as biological models and as indicators of environmental pollution.

## **Theory**

### UNIT I

Beneficial nematode fauna- predators, parasites of insects, molluscs and other pests; Entomophilic nematodes- important groups, types of nematode-insect associations; taxonomic characteristics of nematode parasites of insects.

#### UNIT II

Host-parasite relations and life cycle of mermithids, entaphelenchids, thelastomids, sphaerularids and tylenchids.

#### UNIT III

Entomopathogenic nematodes- *Steinernema* and *Heterorhabditis*, their morphological characteristics, taxonomic status, biology and mode of action.

## **UNIT IV**

Entomopathogenic nematodes- mass multiplication techniques, formulations, field applications and efficacy, success stories.

#### UNIT V

Nematodes as biological models, nematodes as indicators of pollution, role of nematodes in organic matter recycling.

#### **Practical**

Isolation, identification, mass rearing and application methods of entomopathogenic nematodes.

## **Suggested Readings**

## NEMA 512/ ENT 510

## PRINCIPLES OF INTEGRATED PEST MANAGEMENT 1+1

## **Objective**

To familiarize the students with principles of insect pest management, including concept and philosophy of IPM. Train students in computation of ETL, implementing IPM programmes.

## UNIT I

History and origin, definition and evolution of various related terminologies.

#### UNIT II

Concept and philosophy, ecological principles, economic threshold concept, and economic consideration.

## UNIT III

Tools of pest management and their integration- legislative, cultural, physical and mechanical methods; pest survey and surveillance, forecasting, types of surveys including remote sensing methods, factors affecting surveys; political, social and legal implications of IPM; pest risk analysis; pesticide risk analysis; cost-benefit ratios and partial budgeting; case studies of successful IPM programmes.

#### **Practical**

Characterization of agro-ecosystems; sampling methods and factors affecting sampling; population estimation methods; crop loss assessment-direct losses, indirect losses, potential losses, avoidable losses, unavoidable losses. Computation of EIL and ETL; crop modeling; designing and implementing IPM system.

## **Suggested Readings**

## NEMA 513/ DISEASE RESISTANCE IN PLANTS 2+0 PL PATH 513

## **Objective**

To acquaint with disease resistance mechanisms in plants.

#### **Theory**

#### UNIT I

Introduction and historical development, dynamics of pathogenicity, process of infection, variability in plant pathogens, gene centres as sources of resistance, disease resistance terminology.

#### UNIT II

Disease escapes, disease tolerance, disease resistance, types of resistance, identification of physiological races of pathogens, disease progression in relation to resistance, stabilizing selection pressure in plant pathogens.

#### **UNIT III**

Host defence system, morphological and anatomical resistance, preformed chemicals in host defence, post infectional chemicals in host defence, phytoalexins, hypersensitivity and its mechanisms.

## **UNIT IV**

Gene-for-gene concept, protein-for-protein and immunization basis, management of resistance genes. Strategies for gene deployment.

## **Suggested Readings**

## NEM 514/ ENT 520

## PLANT QUARANTINE

2+0

## **Objective**

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

## **Theory**

#### UNIT I

Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine – domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/diseases and their status.

## UNIT II

Plant protection organization in India. Acts related to registration of pesticides and transgenics. History of quarantine legislations, PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export of bio-control agents.

### **UNIT III**

Identification of pest/disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis

and other techniques to detect pest/pathogen infestations; VHT and other safer techniques of disinfestation/salvaging of infected material.

## **UNIT IV**

WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; pesticide industry; Sanitary and Phytosanitary measures.

## **Suggested Readings**

Rajeev K & Mukherjee RC. 1996. *Role of Plant Quarantine in IPM*. Aditya Books.

Rhower GG. 1991. Regulatory Plant Pest Management. In: *Handbook of Pest Management in Agriculture*. 2<sup>nd</sup> Ed. Vol. II. (Ed. David Pimental). CRC Press.

## NEMA 601 ADVANCES IN STRUCTURE AND SYSTEMATICS 2+1 OF NEMATODES

## **Objective**

Studies on the ultrastructure of plant parasitic nematodes based on TEM and SEM, and appraisal of recent developments in their classification.

## **Theory**

## UNIT I

Ultrastructure of nematode body wall- cuticle, hypodermis and muscles; nematode feeding apparatus, and other parts of alimentary canal.

#### UNIT II

Ultrastructure of nematode sense organs, reproductive and excretory-secretory systems.

#### UNIT III

Principles and rules of nomenclature and classification; preparation of illustrations, keys and compendia for nematode species and other taxa.

## UNIT IV

Non-conventional approaches of nematode identification molecular, biochemical, immunodiagnostic, molecular characterization and DNA finger-printing techniques.

#### UNIT V

Development of computer-based nematode identification programmes.

## **Practical**

Detailed studies of morphological structures and identification of plant parasitic nematodes up to species level. Drawing and measurements of nematodes, preparation of compendia and keys. Identification of species/races of root-knot and cyst nematodes using PAGE.

## **Suggested Readings**

## NEMA 602 CURRENT TOPICS IN NEMATODE DISEASE 2+1 DEVELOPMENT AND HOST RESISTANCE

## **Objective**

To update knowledge on the recent research trends in the field of plant nematode relationships at genetic and molecular level.

## Theory

## UNIT I

Mechanisms of pathogenesis, cytological and biochemical changes induced by nematode feeding.

#### UNIT II

Plant defense systems, role of phytoalexins etc. against major plant parasitic nematodes.

#### UNIT III

Genetic basis of plant resistance to nematodes and identification of resistance genes against economically important nematodes.

## UNIT IV

Application of biotechnological methods in the development of nematode resistant crop cultivars; resistance markers; incorporation of resistance by conventional breeding and transgenic approaches.

## UNIT V

Influence of microorganisms on plant nematode interactions.

#### **Practical**

Microtomy for study of histopathological changes induced by important nematodes, screening techniques for assessment of resistance in crop germplasm against nematodes.

## **Suggested Readings**

- Barker KR, Pederson GA & Windham GL. 1998. *Plant and Nematode Interactions*. CABI, Wallingford.

## NEMA 603 ADVANCES IN NEMATODE MANAGEMENT 2+1 Objective

To keep abreast with latest developments and trends in nematode management.

#### UNIT I

Isolation, identification, host specificity, mode of action, culturing and field application potential of promising bio-control agents- predacious and parasitic fungi; nematoxic fungal culture filtrates.

## UNIT II

Isolation, identification, host specificity, mode of action, culturing and field application potential of promising bio-control agents- parasitic and nematode antagonistic bacteria; predacious mites and predacious nematodes.

#### **UNIT III**

Mass culturing, formulation, quality control, bio-safety and registration protocols of bio-control agents.

#### **UNIT IV**

Phytoalexins, allelochemicals, phytotherapeutic substances, novel nematicides, deployment of resistant varieties and non-host crops in nematode suppressive cropping systems, emergence of resistance breaking biotypes, recent regulatory provisions and methods, quarantine and disinfection.

#### UNIT V

Nematode management modules for integrated pest and disease management in cropping systems. Nematode management options and approaches for organic farming and precision farming. Application of GIS and GPS technology for surveillance and management.

#### **Practical**

Green-house experiments on the efficacy of fungal and bacterial bio-control agents, botanicals.

## **Suggested Readings**

## NEMA 604 PHYSIOLOGICAL AND MOLECULAR 2+1 NEMATOLOGY

## **Objective**

Appraisal on the application of modern biotechnological tools in Nematology.

#### UNIT I

Cell biology- Structural and functional aspects; genetics and evolution in plant parasitism in nematodes.

#### UNIT II

Caenorhabditis elegans- a model system for gerontology, cytogenetics, physiology, nutritional, toxicological and pharmacological studies; Heterodera glycines as a model for biology, proteomic and genomic studies.

#### **UNIT III**

Chemoreception, neurobiology, and biochemical basis of communication in nematodes, molecular basis of host recognition.

## UNIT IV

Biochemical, genetical and molecular basis of plant nematode interaction; histopathological, cellular and molecular changes in host feeding cells, resistance genes and RNAi technology.

#### UNIT V

Biochemical and molecular basis of survival strategies in nematodes, molecular mechanism of host resistance against plant parasitic nematodes, molecular and novel approaches for nematode management.

#### **Practical**

Isolation and quantification of proteins from nematode juveniles and eggs; molecular weight determination of nematode protein;  $\beta$ -esterase polymorphism in root-knot nematode; nematode DNA isolation from juveniles and eggs; RFLP of nematode DNA; nematode DNA amplification using PCR for nematode identification, RNAi technology.

## **Suggested Readings**

## NEMA 605/ PLANT BIOSECURITY AND BIOSAFETY 2+0 PL PATH 606

## **Objective**

To facilitate deeper understanding on plant biosecurity and biosafety issues in agriculture.

#### UNIT I

History of biosecurity, concept of biosecurity, components of biosecurity, Quarantine, Invasive Alien Species, biowarfare, emerging/resurgence of pests and diseases.

#### UNIT II

National Regulatory Mechanism and International Agreements/Conventions viz., Agreement on Application of Sanitary and Phytosanitary (SPS) Measures/World Trade Organization (WTO), Convention on Biological Diversity (CBD), International Standards for Phytosanitary Measures, pest risk analysis, risk assessment models, pest information system, early warning and forecasting system, use of Global Positioning System (GPS) and Geographic Information System (GIS) for plant biosecurity, pest/disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity.

#### **UNIT III**

Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, issues related to release of genetically modified crops.

## **Suggested Broad Topics for Master's and Doctoral Research**

- Identification of key nematode pests emerging in regional agro-ecosystems
- Development of molecular diagnostic tools of phytonematodes
- Nematode problems of peri-urban and protected agriculture systems, and their management
- Role of nematodes in organic matter recycling
- Modelling nematode populations for disease forecasting and predicting yield losses
- Nematodes as indicators of environmental pollution
- Identification of cost effective nematode-suppressive cropping systems for specific agro-ecosystems
- Isolation, identification and characterization of phytochemicals for nematoxicity
- Disinfection of nematode-infected planting material through eco-friendly sanitary methods
- Characterization of molecular markers and genes governing resistance to key nematode pests
- Management of nematodes with antagonistic bacteria
- Bionomics of potential bio-control agents and their field efficacy
- Devising non-chemical methods of nematode management in mushroom cultivation
- Development of nematode management modules for IPM systems
- Field efficacy and formulation of entomopathogenic nematodes against foliar and soil-borne insect pests of crops
- Study of disease complex involving nematodes and other plant pathogens.
- Nematode suppressive rhizospheric microorganisms.

## PLANT PATHOLOGY

## Course Contents MYCOLOGY

## **PL PATH 501**

**Objective** 

To study the nomenclature, classification and characters of fungi.

## Theory

#### UNIT I

Introduction, definition of different terms, basic concepts. Identification of fungi.

#### UNIT II

Importance of mycology in agriculture, relation of fungi to human affairs, history of mycology.

2+1

#### UNIT III

Concepts of nomenclature and classification, fungal biodiversity, reproduction in fungi.

## UNIT IV

The comparative morphology, ultrastructure, characters of different groups of fungi according to Alexopoulos *et al.*(2000), Protista: i.Myxomycota ii. Plasmodiophoromycota, Stramenopila: i. Oomycota ii. Hyphochytridiomycota, Fungi: i. Chytridiomycota ii. Zygomycota, iii. Ascomycota, iv. Basidiomycota, Lichens types and importance, fungal genetics and variability in fungi.

#### **Practical**

Detailed comparative study of different groups of fungi; collection, identification and preservation of specimens. Isolation and identification of plant pathogenic fungi.

## **Suggested Readings**

Ainsworth GC, Sparrow FK & Susman HS. 1973. *The Fungi - An Advanced Treatise*. Vol. IV (A & B). Academic Press, New York.

Alexopoulos CJ, Mims CW & Blackwell M.2000. *Introductory Mycology*. 5th Ed. John Wiley & Sons, New York.

Tripathi, DP. 2006. Introductory Mycology. Kalyani Publishers. New Delhi.

Webster J. 1980. *Introduction to Fungi*. 2<sup>nd</sup> Ed. Cambridge Univ. Press, Cambridge, New York.

#### PL PATH 502 PLANT VIROLOGY 2+1

## **Objective**

To acquaint with the structure, virus-vector relationship, biology and management of plant viruses.

## **Theory**

#### <u>UNIT I</u>

History of plant viruses, Economic importance, composition and structure of viruses.

## UNIT II

Symptomatology of important plant viral diseases, transmission, chemical and physical properties, host virus interaction, virus vector relationship.

## UNIT III

Physiology of virus infected plant, Ecology, Virus nomenclature and classification, genome organization, replication and movement of viruses.

Epidemiology of viral diseases.

# UNIT IV

Isolation and purification, electron microscopy, protein and nucleic acid based diagnostics.

# UNIT V

Mycoviruses, phytoplasma arbo and baculoviruses, satellite viruses, satellite RNAs, phages, viroids, prions. Principles of the working of electron-microscope and ultra-microtome.

#### UNIT VI

Origin and evolution, mechanism of resistance, genetic engineering, ecology, and management of plant viruses.

#### **Practical**

Study of symptoms caused by viruses, transmission, assay of viruses, physical properties, purification, method of raising antisera, serological tests, electron microscopy and ultratomy, PCR.

# **Suggested Readings**

Bos L. 1964. Symptoms of Virus Diseases in Plants. Oxford & IBH., New Delhi.

Brunt AA, Krabtree K, Dallwitz MJ, Gibbs AJ & Watson L. 1995. Virus of Plants: Descriptions and Lists from VIDE Database. CABI, Wallington.

Noordam D. 1973. *Identification of Plant Viruses, Methods and Experiments*. Oxford & IBH, New Delhi.

## PL PATH 503 PLANT BACTERIOLOGY 2+1

#### **Objective**

To acquaint with plant pathogenic prokaryote (procarya) and their structure, nutritional requirements, survival and dissemination.

# Theory

#### INITI

History and introduction to phytopathogenic procarya, viz., bacteria, MLOs, spiroplasmas and other fastidious procarya. Importance of phytopathogenic bacteria.

# **UNIT II**

Evolution, classification and nomenclature of phytopathogenic procarya and important diseases caused by them. Microscopy.

#### UNIT III

Growth, nutrition requirements, selected media reproduction, preservation of bacterial cultures and variability among phytopathogenic procarya.

# **UNIT IV**

General biology of bacteriophages, L form bacteria, plasmids and bdellovibrios.

# **UNIT V**

Procaryotic inhibitors and their mode of action against phytopathogenic bacteria.

# **UNIT VI**

Survival and dissemination of phytopathogenic bacteria.

#### **Practical**

Isolation, purification, identification and host inoculation of phytopathogenic bacteria, staining methods, biochemical and serological characterization, isolation of plasmid and use of antibacterial chemicals/antibiotics. Methods in

pure culture studies, microscopy i.e. phase contrast and other microscopes.

# **Suggested Readings**

Snyder, L.and Chapness, W.2003. Molecular genetics of Bacteria, ASM Press, American society for Micribiology.

# PL PATH 504 PRINCIPLES OF PLANT PATHOLOGY Objective 3+0

To introduce the subject of Plant Pathology, its concepts and principles.

# Theory

## **UNIT I**

Importance, definitions and concepts of plant diseases, history and growth of plant pathology, biotic and abiotic causes of plant diseases.

#### **UNIT II**

Growth, reproduction, survival and dispersal of important plant pathogens, role of environment and host nutrition on disease development.

#### UNIT III

Host parasite interaction, recognition concept and infection, symptomatology, disease development- role of enzymes, toxins, growth regulators; defense strategies- oxidative burst; Phenolics, Phytoalexins, PR proteins, Elicitors. Altered plant metabolism as affected by plant pathogens.

# **UNIT IV**

Genetics of resistance; 'R' genes; mechanism of genetic variation in pathogens; molecular basis for resistance; marker-assisted selection; genetic engineering for disease resistance.

#### **UNIT V**

Disease management strategies.

#### **Suggested Readings**

Agrios GN. 2005. Plant Pathology. 5th Ed. Academic Press, New York.

Heitefuss R & Williams PH. 1976. *Physiological Plant Pathology*. Springer Verlag, Berlin, New York.

Oxford & IBH,, New Delhi.

Upadhyay RK & Mukherjee KG. 1997. Toxins in Plant Disease Development and Evolving Biotechnology. Oxford & IBH, New Delhi.

## **Objective**

To impart training on various methods/techniques/instruments used in the study of plant diseases/pathogens.

#### **Practical**

# UNIT I

Methods to prove Koch's postulates with biotroph and necrotroph pathogens, pure culture techniques, use of selective media to isolate pathogens.

#### UNIT II

Preservation of plant pathogens and disease specimens, use of haemocytometer, micrometer, centrifuge, pH meter, camera lucida.

#### UNIT III

Microscopic techniques and staining methods, phase contrast system, chromatography, use of electron microscope, spectrophotometer, ultracentrifuge and electrophoretic apparatus, disease diagnostics, serological and molecular techniques for detection of plant pathogens. Evaluation of fungicides, bactericides etc.; field experiments, data collection and preparation of references.

# PL PATH 506 PRINCIPLES OF PLANT DISEASE MANAGEMENT 2+1 Objectives

To acquaint with different strategies for management of plant diseases.

# **Theory**

#### UNIT I

Principles of plant disease management by cultural, physical, biological,

chemical, organic amendments and botanicals methods of plant disease control, integrated control measures of plant diseases. Disease resistance, **Plant quarantine** and molecular approach for disease management.

#### UNIT II

Foliage, seed and soil application of chemicals, role of stickers, spreaders and other adjuvants, health vis-a-vis environmental hazards, residual effects and safety measures.

# UNIT III

History of fungicides, bactericides, antibiotics, concepts of pathogen, immobilization, chemical protection and chemotherapy, nature, properties and mode of action of antifungal, antibacterial and antiviral chemicals.

#### **Practical**

*In vitro* and *in vivo* evaluation of chemicals against plant pathogens; ED and MIC values, study of structural details of sprayers and dusters.

# **Suggested Readings**

Fry WE. 1982. Principles of Plant Disease Management. Academic Press, New York.

HewittHG. 1998. Fungicides in Crop Protection. CABI, Wallington.

Vyas SC. 1993 *Handbook of Systemic Fungicides*. Vols. I-III. Tata McGraw Hill, New Delhi.

# PL PATH 507 DISEASES OF FIELD AND MEDICINAL CROPS Objective 2+1

To educate about the History, economic importance, disease cycle, nature, prevalence, etiology, factors affecting disease development and control measures of field and medicinal crop diseases.

# **Theory**

#### UNIT I

Diseases of Cereal crops- wheat, barley, rice, pearl millet, finger millet, sorghum and maize.

# UNIT II

Diseases of Pulse crops- gram, urdbean, mungbean, lentil, pigeonpea, soybean, rajmah and cowpea.

# UNIT III

Diseases of Oilseed crops- rapeseed and mustard, sesame, linseed, sunflower, groundnut, castor, safflower and niger.

# **UNIT IV**

Diseases of Cash crops- cotton, sugarcane, tobacco.

#### UNIV V

Diseases of Fodder legume crops- berseem, oats, guar, lucerne,

#### **UNIT VI**

Medicinal crops- plantago, liquorice, *mulathi*, rosagrass, senna, guggal, mentha, *ashwagandha*, *Aloe vera*.

#### **Practical**

Detailed study of symptoms and host parasite relationship of important diseases of above mentioned crops. Collection and dry preservation of

diseased specimens of important crops.

# **Suggested Readings**

Thind, TS. 2005. Diseases Of Field Crops And Their Management, Daya Publishing House

# PL PATH 508 DISEASES OF FRUITS, PLANTATION AND ORNAMENTAL CROPS

2+1

# **Objective**

To educate about the, History, economic importance, disease cycle, nature, prevalence and control measures of diseases of fruits, plantation, ornamental plants and their management.

# **Theory**

#### UNIT I

Introduction, symptoms and etiology of different fruit diseases. Factors affecting disease development in fruits like apple, pear, **Aonla, custard apple, sapota,** almond, strawberry, citrus, mango, grapes, guava, *ber*, banana, pineapple, papaya, fig, pomegranate, date palm and management of the fruits diseases.

#### UNIT II

Symptoms, mode of perpetuation of diseases of plantation crops such as tea, coffee, rubber, arecanut, elephant foot(suran) and colocassia, beetle vine and coconut and their management.

# UNIT III

Symptoms and life cycle of pathogens. Factors affecting disease development of ornamental plants such as roses, gladiolus, tulip, carnation, orchids, marigold, chrysanthemum, tuberose and gerbera and their management.

#### **Practical**

Detailed study of symptoms and host parasite relationship of representative diseases of plantation crops. Collection and dry preservation of diseased specimens of important crops.

# **Suggested Readings**

# PL PATH 509 DISEASES OF VEGETABLE AND SPICES CROPS Objective 2+1

To educate about the History, economic importance, disease cycle, nature, prevalence and control measures of diseases of vegetables and spices and their management.

# **Theory**

#### **UNIT I**

Nature, prevalence, factors affecting disease development of bulb: Onion and garlic, Leafy vegetable: Spinach, Crucifers: Cabbage, cauliflower, radish, Cucurbits and solanaceaous vegetables: Potato, tomato, chilli, brinjal, Diseases of protected cultivation: Okra, pea and carrot.

#### **UNIT II**

Symptoms and management of diseases of different root, bulb, leafy vegetables, crucifers, cucurbits and solanaceaous vegetable crops.

#### UNIT III

Symptoms, epidemiology and management of diseases of different spice crops such as black pepper, cumin, coriander, turmeric, fennel, fenugreek and ginger.

#### **Practical**

Detailed study of symptoms and host pathogen interaction of important diseases of vegetable and spice crops.

# **Suggested Readings**

# PL PATH 510 SEED HEALTH TECHNOLOGY

# 2 + 1

#### **Objective**

To acquaint with seed-borne diseases, their nature, detection, transmission, epidemiology, impacts/loses and management.

# **Theory**

# UNIT I

History and economic importance of seed pathology in seed industry, plant quarantine and SPS under WTO. Morphology and anatomy of typical monocotyledonous and dicotyledonous infected seeds.

#### UNIT II

Recent advances in the establishment and subsequent cause of disease development in seed and seedling. Localization and mechanism of seed transmission in relation to seed infection, seed to plant transmission of pathogens.

# **UNIT III**

Seed certification and tolerance limits, types of losses caused by seed-borne diseases in true and vegetatively propagated seeds, evolutionary adaptations of crop plants to defend seed invasion by seed-borne pathogens. Epidemiological factors influencing the transmission of seed-borne diseases, forecasting of epidemics through seed-borne infection.

#### UNIT IV

Production of toxic metabolites affecting seed quality and its impact on human, animal and plant health, management of seed-borne pathogen/diseases and procedure for healthy seed production, seed health testing, methods for detecting microorganism.

#### **Practical**

Conventional and advanced techniques in the detection and identification of seed-borne fungi, bacteria and viruses. Management: effect of pH, water treatment, seed soaking, heating technique, washing, chemical seed treatment and certification standard. Relationship between seed-borne infection and expression of the disease in the field.

# **Suggested Readings**

# PL PATH 511 CHEMICALS IN PLANT DISEASE MANAGEMENT 2+1 Objective

To impart knowledge on the concepts, principles and judicious use of chemicals in plant disease management.

# **Theory**

#### UNIT I

History and development of chemicals; definition of pesticides and related terms; advantages and disadvantages of chemicals.

#### UNIT II

Classification of chemicals used in plant disease control and their characteristics.

#### UNIT III

Chemicals in plant disease control, viz., fungicides, bactericides, nematicides, antiviral chemicals and botanicals.

# **UNIT IV**

Formulations, mode of action and application of different fungicides; chemotherapy and phytotoxicity of fungicides.

#### UNIT V

Handling, storage and precautions to be taken while using fungicides; compatibility with other agrochemicals, persistence, cost-benefit ratio, factor affecting fungicides.

## **UNIT VI**

General account of plant protection appliances; environmental pollution, residues and health hazards, fungicidal resistance in plant pathogens and its management.

#### **Practical**

Acquaintance with formulation of different fungicides and plant protection appliances. Formulation of fungicides, bactericides and nematicides; *in vitro* evaluation techniques, preparation of different concentrations of chemicals including botanical pesticides based on active ingredients against pathogens; persistence, compatibility with other agro-chemicals; detection of naturally occurring fungicide resistant mutants of pathogen; methods of application of chemicals.

# **Suggested Readings**

Vyas SC. 1993. *Handbook of Systemic Fungicides*. Vo1s. I-III. Tata McGraw Hill, New Delhi.

# PL PATH 512 ECOLOGY OF SOIL-BORNE PLANT PATHOGENS <u>1+1</u>

# **Objective**

To provide knowledge on soil-plant disease relationship.

# Theory

#### UNIT I

Soil as an environment for plant pathogens, nature and importance of rhizosphere and rhizoplane, host exudates, soil and root inhabiting fungi. Types of biocontrol agents.

# UNIT II

Inoculum potential and density in relation to host and soil variables, competition, predation, antibiosis and fungistasis.

# UNIT III

Suppressive soils, biological control- concepts and potentialities for managing soil borne pathogens.

#### **Practical**

Quantification of rhizosphere and rhizoplane microflora with special emphasis on pathogens; pathogenicity test by soil and root inoculation techniques, correlation between inoculum density of test pathogens and disease incidence, demonstration of fungistasis in natural soils; suppression of test soil-borne pathogens by antagonistic microorganisms. Isolation and identification of different biocontrol agents.

# **Suggested Readings**

#### PL PATH 513 DISEASE RESISTANCE IN PLANTS

2+0

# **Objective**

To acquaint with disease resistance mechanisms in plants.

# **Theory**

#### **UNIT I**

Introduction and historical development, dynamics of pathogenicity, process of infection, variability in plant pathogens, gene centres as sources of resistance, disease resistance terminology.

# **UNIT II**

Disease escapes, disease tolerance, disease resistance, types of resistance, identification of physiological races of pathogens, disease progression in relation to resistance, stabilizing selection pressure in plant pathogens.

#### UNIT III

Host defence system, morphological and anatomical resistance, preformed chemicals in host defence, post infectional chemicals in host defence, phytoalexins, hypersensitivity and its mechanisms.

# **UNIT IV**

Gene-for-gene concept, protein-for-protein and immunization basis, management of resistance genes. Strategies for gene deployment.

# **Suggested Readings**

# PL PATH 514/ INSECT VECTORS OF PLANT VIRUSES ENT 514 AND OTHER PATHOGENS

1+1

# **Objective**

To teach the students about the different groups of insects that vector plant pathogens, vector-plant pathogen interaction, management of vectors for controlling diseases.

#### **Theory**

#### UNIT I

History of developments in the area of insects as vectors of plant pathogens. Important insect vectors and their characteristics; mouth parts and feeding processes of important insect vectors. Efficiency of transmission.

#### **UNIT II**

Transmission of plant viruses and fungal pathogens. Relation between viruses and their vectors.

#### UNIT III

Transmission of plant viruses by aphids, whiteflies, mealy bugs thrips, **Nematodes and fungi.** 

# **UNIT IV**

Transmission of mycoplasma and bacteria by leaf hoppers and plant hoppers.

## **UNIT V**

Transmission of plant viruses by psyllids, beetles and mites. Epidemiology and management of insect transmitted diseases through vector management.

#### **Practical**

Identification of common vectors of plant pathogens- aphids, leafhoppers, whiteflies, thrips, beetles, nematodes; culturing and handling of vectors; demonstration of virus transmission through vectors- aphids, leafhoppers and whiteflies.

# **Suggested Readings**

Basu AN. 1995. Bemisia tabaci (Gennadius) - Crop Pest and Principal Whitefly Vector of Plant Viruses. Oxford & IBH, New Delhi.

# PL PATH 515 BIOLOGICAL CONTROL OF PLANT DISEASES 2+1 Objective

To study principles and application of ecofriendly and sustainable management strategies of plant diseases.

# **Theory**

# UNIT I

Concept of biological control, definitions, importance, principles of plant disease management with bioagents, history of biological control, merits and demerits of biological control.

# **UNIT II**

Types of biological interactions, competition, mycoparasitism, exploitation for hypovirulence, rhizosphere colonization, competitive saprophytic ability, antibiosis, induced resistance, mycorrhizal associations, operational mechanisms and its relevance in biological control.

#### UNIT III

Factors governing biological control, role of physical environment, agroecosystem, operational mechanisms and cultural practices in biological control of pathogens, pathogens and antagonists and their relationship, biocontrol agents, comparative approaches to biological control of plant pathogens by resident and introduced antagonists, control of soil-borne and foliar diseases. Compatibility of different bioagents.

#### IINIT IV

Commercial production of antagonists, their delivery systems, application and monitoring, biological control in IDM, IPM and organic farming system, biopesticides available in market. Quality control system of biocontrol agents.

#### **Practical**

Isolation, characterization and maintenance of antagonists, methods of study of

antagonism and antibiosis, application of antagonists against pathogen *in vitro* and *in vivo* conditions. Study of cfu/g, Commercial production of antagonists.

# **Suggested Readings**

Campbell R. 1989. *Biological Control of Microbial Plant Pathogens*. Cambridge Univ. Press, Cambridge.

Mukerji KG, Tewari JP, Arora DK & Saxena G. 1992. Recent Developments in Biocontrol of Plant Diseases. Aditya Books, New Delhi.

# PL PATH 516 INTEGRATED DISEASE MANAGEMENT Objective 1+1

To emphasize the importance and need of IDM in the management of diseases of important crops.

# **Theory**

## **UNIT I**

Introduction, definition, concept and tools of disease management, components of integrated disease management- their limitations and implications.

# **UNIT II**

Development of IDM- basic principles, biological, chemical and cultural disease management.

#### UNIT III

IDM in important crops- rice, wheat, cotton, sugarcane, chickpea, rapeseed-mustard, pearlmillet, *kharif* pulses, vegetable crops and fruit crops.

#### **Practical**

Application of biological, cultural, chemical and biocontrol agents, their compatibility and integration in IDM; demonstration of IDM in certain crops as project work.

# **Suggested Readings**

Sharma RC & Sharma IN. (Eds). 1995. *Integrated Plant Disease Management*. Scientific Publ., Jodhpur.

# PL PATH 517 MUSHROOM PRODUCTION TECHNOLOGY 2+1 Objective

To develop mushroom cultivation skills for entrepreneurial activity. Historical development of mushroom cultivation and present status of mushroom industry in India.

# **Theory**

#### UNIT I

Historical development of mushroom cultivation and present status, taxonomy,

classification, food, medicinal value, uses of mushroom, edible and poisonous mushrooms.

#### **UNIT II**

Life cycle of cultivated mushrooms, reproduction and strain improvement, maintenance of pure culture, preparation of spawn and facilities required for establishing commercial spawn lab.

#### UNIT III

Preparation of substrate for mushroom cultivation, long, short and indoor composting methods, formulae for different composts and their computation, qualities and testing of compost, uses of spent mushroom compost/substrate.

#### **UNIT IV**

Facilities for setting up mushroom farm for seasonal and environmentally control cultivation, requirement and maintenance of temperature, relative humidity, C02, ventilation in cropping rooms, cultivation technology of *Agaricus bisporus*, *Pleurotus* sp., *Calocybe indica*, *Lentinus edodes* and *Ganoderma lucidum*.

# **UNIT V**

Insect pests, diseases and abnormalities of cultivated mushroom and their management, post harvest processing and value addition, economics of mushroom cultivation, biotechnology and mushroom cultivation.

#### **Practical**

Preparation of spawn, compost, spawning, casing, harvesting and postharvest handling of edible mushroom; identification of various pathogens, competitors of various mushroom.

# **Suggested Readings**

Dhar BL. 2005. Cultivation Technology of High Temperature Tolerant White Button Mushroom. DIPA, ICAR, New Delhi.

# PLPATH 518 EPIDEMIOLOGY AND FORECASTING OF PLANT DISEASES 2+1 Objective

To acquaint with the principles of epidemiology and its application in disease forecasting.

# Theory

# UNIT I

Epidemic concept and historical development, pathometry and crop growth stages, epidemic growth and analysis.

# UNIT II

Common and naturallogrithms, function fitting area under disease progress curve and correction factors, inoculum dynamics, population biology of pathogens, temporal spatial variability in plant pathogens.

# UNIT III

Survey, surveillance and vigilance, crop loss assessment and models.

#### **UNIT IV**

Principles and pre-requisites of forecasting, systems and factors affecting various components of forecastings, some early forecasting, procedures based on weather and inoculum potential, modeling disease growth and disease

prediction.

# **Practical**

Measuring diseases, spore dispersal and trapping, weather recording, survey, multiplication of inoculum, computerized data analysis, function fitting, model preparation and validation.

# **Suggested Readings**

# PL PATH 519 POST HARVEST DISEASES 2+1

# **Objective**

To acquaint with post harvest diseases of agricultural produce and their ecofriendly management.

# **Theory**

#### UNIT I

Concept of post harvest diseases, definitions, importance with reference to environment and health, principles of plant disease management as preharvest and post-harvest, merits and demerits ofbiologically phytoextracts in controlling post-harvest diseases.

# UNIT II

Types of post harvest problems both by biotic and abiotic causes, rhizosphere colonization, competitive, saprophytic ability, antibiosis, induced resistance, microbial associations, concept, operational mechanisms and its relevance in control.

#### **UNIT III**

Factors governing post harvest problems both as biotic and abiotic, role of physical environment, agro-ecocystem leading to quiescent infection, operational mechanisms and cultural practices in perpetuation of pathogens, pathogens and antagonist and their relationship, role of biocontrol agents, oils, botanical pesticides, chemicals, physical methods and resistant varieties in controlling post-harvest diseases, comparative approaches to control of plant pathogens by resident and introduced antagonists. Isolation, characterization and maintenance of pathogens, role of different storage.

# **UNIT IV**

Integrated approach in controlling diseases and improving the shelf life of produce, control of atlatoxigenic and mycotoxigenic fungi, application and monitoring for any health hazard, knowledge of Codex Alimentarious for each product and commodity.

#### **Practical**

Isolation characterization and maintenance of pathogens, role of different storage conditions on disease development, application of antagonists against

pathogens *in vivo* and *in vitro* conditions. Comparative efficacy of different chemicals, fungicides, phytoextracts and bioagents.

# **Suggested Readings**

Pathak VN. 1970. Diseases of Fruit Crops and their Control. IBH Publ., New Delhi.

Chaddha KL & Pareek OP. 1992. *Advances in Horticulture* Vol. IV, Malhotra Publ. House, New Delhi.

# PL PATH 520/ PLANT QUARANTINE ENT 520

2+0

# **Objective**

To acquaint the learners about the principles and the role of Plant Quarantine in containment of pests and diseases, plant quarantine regulations and set-up.

# **Theory**

# UNIT I

Definition of pest, pesticides and transgenics as per Govt. notification; relative importance; quarantine - domestic and international. Quarantine restrictions in the movement of agricultural produce, seeds and planting material; case histories of exotic pests/diseases and their status.

#### **UNIT II**

Plant protection organization in India. Acts related to registration of pesticides and transgenics. History of quarantine legislations, PQ Order 2003. Environmental Acts, Industrial registration; APEDA, Import and Export ofbiocontrol agents.

# UNIT III

Identification of pest/disease free areas; contamination of food with toxigens, microorganisms and their elimination; Symptomatic diagnosis

and other techniques to detect pest/pathogen infestations; VHT and other safer techniques of disinfestation/salvaging of infected material.

#### UNIT IV

WTO regulations; non-tariff barriers; Pest risk analysis, good laboratory practices for pesticide laboratories; pesticide industry; Sanitary and Phytosanitary measures.

# **Suggested Readings**

Rajeev K & Mukherjee RC. 1996. Role of Plant Quarantine in IPM. Aditya Books.

Ebbels, DL and . Ebbel, DS. 2003. Principles Of Plant Health And Quarantine. CABI Publishing

#### PL PATH 601 ADVANCED MYCOLOGY

2+1

# **Objective**

To acquaint with the latest advances in Mycology.

# **Theory**

# UNIT I

General introduction, historical development and advances in mycology.

#### UNIT II

Recent taxonomic criteria, morphological criteria for classification. Serological, Chemical (chemotaxonomy), Molecular and Numerical (Computer based assessment) taxonomy.

# UNIT III

Interaction between groups: Phylogeny. Micro conidiation, conidiogenesis and

sporulating structures of fungi imperfecti. Morphology and reproduction of representative plant pathogenic genera from different groups of fungi. Sexual reproduction in different groups of fungi.

#### **UNIT IV**

Population biology, pathogenic variability/vegetative compatibility.

# **UNIT V**

Heterokaryosis and parasexual cycle. Sex hormones in fungi. Pleomorphism and speciation in fungi. Mechanism of nuclear inheritance. Mechanism of extra-nuclear inheritance. Biodegradation.

#### **Practical**

Study of conidiogenesis- phialides, porospores, arthospores. Study of fruit bodies in Ascomycotina. Identification of fungi up to species level. Study of hyphal anastomosis. Morphology of representative plant pathogenic genera from different groups of fungi.

# **Suggested Readings**

Alexopoulos CJ, Mimms CW & Blackwell M. 1996. *Introductory Mycology*. John Wiley & Sons, New York.

Dube HC. 2005. An Introduction to Fungi. 3<sup>rd</sup> Ed. Vikas Publ. House, New Delhi.

Webster J & Weber R. 2007. *Introduction to Fungi*. Cambridge Univ. Press, Cambridge.

#### PL PATH 602 ADVANCED VIROLOGY

2+1

#### **Objective**

To educate about the advanced techniques and new developments in the field of Plant Virology.

# **Theory**

# UNIT I

**Origin, evolution and interrelationship with animal viruses**. Mechanism of virus transmission by vectors, virus-vector relationship, bimodal transmission and taxonomy of vectors and viruses, vector specificity for classes of viruses, virus replication, assembly and architecture, ultrastructural changes due to virus infection, variation, mutation and virus strains.

# **UNIT II**

Immunoglobulin structure and functions of various domains, methods of immunodiagnosis, hybridoma technology and use of monoclonal antibodies in identification of viruses and their strains, Polymerase Chain Reaction.

# **UNIT III**

Genome organization, replication, transcription and translational strategies of pararetroviruses and gemini viruses, satellite viruses and satellite RNA genome organization in tobamo-, poty-, bromo, cucummo, ilar and tospoviruses.

# **UNIT IV**

Gene expression and regulation, viral promoters, molecular mechanism of host virus interactions, virus induced gene, molecular mechanism of vector transmission, symptom expression, viroids and prions.

#### UNIT V

Genetic engineering with plant viruses, viral suppressors, a RNAi dynamics, resistant genes. Viruses potential as vectors, genetically engineered resistance, transgenic plants.

# **UNIT VI**

Techniques and application of tissue culture. Origin, evolution and interrelationship with animal viruses.

#### **Practical**

Purification of virus(es), SDS-PAGE for molecular weight determination, production of polyclonal antiserum, purification of IgG and conjugate preparation, serological techniques (i) DAC-ELISA (ii) DAS -ELISA (iii) DffiA (iv) Western blots (v) (ab) 2-ELISA, vector transmission (one each with aphid, leaf hopper and whitefly), methods for collecting vectors and their maintenance, nucleic acid isolation, DOT -blot, southern hybridization, probe preparation and autoradiography, PCR application and viral genome cloning, sequencing annotation of genes.

# PL PATH 603 ADVANCED BACTERIOLOGY

2+1

# **Objective**

To provide knowledge about the latest advances in phytobacteriology.

# **Theory**

# UNIT I

Current approaches for the characterization and identification of phytopathogenic bacteria. Ultrastructures and biology of bacteria.

#### UNIT II

Current trends in taxonomy of phytopathogenic procarya.: Chemotaxonomy, fatty acid and protein profile, characterization and approaches for identification of bacteria including nucleic acid technology, genomic finger printing and computer based identification of bacteria. Plasmid biology i.e. Plasmid profile and RFLP,

# **UNIT III**

Role of enzyme, toxin, expolysaccharide, polypeptide signals in disease development. Mechanism of wilt (*Ralstonia solanacearum*) development, mechanism of soft rot (*Erwinia* spp.) development, mechanism of Crown gall formation (*Agrobacterium tumifaciens*).

#### **UNIT IV**

Host-bacterial pathogen interaction, quorum-sensing phenomenon, Type III secretion system, HR/SR reactions, R-genes, Avr-genes, hrp genes, Effector protein.

#### **UNIT V**

Molecular variability among phytopathogenic procarya and possible host defense mechanism(s). Genetic engineering for management of bacterial plant pasthogens-gene silencing, RNAi technology.

#### **UNIT VI**

Epidemiology in relation to bacterial plant pathogens. Development of diagnostic kit.

# **UNIT VII**

Beneficial prokaryotes- Endophytes, PGPR, phylloplane bacteria and their role in disease management. Endosymbionts for host defence.

#### **Practical**

Pathogenic studies and race identification; plasmid profiling of bacteria; fatty acid profiling of bacteria; RAPD prolfiling of bacteria and variability status; Endospore, Flagiler staining; test for secondary metabolite production, cyanides, EPS, siderophore; specific detection of phytopathogenic bacteria using species/pathovar specific primers. Basic techniques in diagnostic kit development, molecular tools to identify phytoendosymbionts.

# PL PATH 604 MOLECULAR BASIS OF HOST-PATHOGEN INTERACTION 2+1 Objective

To understand the concepts of molecular biology and biotechnology in relation to host-pathogen interactions.

# **Theory**

#### UNIT I

Importance and role of biotechnological tools in Plant Pathology- Basic concepts and principles to study host pathogen relationship.

#### UNIT II

Molecular basis of host-pathogen interaction- fungi, bacteria and viruses; recognition system, signal transduction.

#### UNIT III

Induction of defense responses- pathogenesis related proteins, HR, reactive oxygen species, phytoalexins and systemic acquired resistance, Programmed Cell Death, Viral induced gene silencing.

# **UNIT IV**

Molecular basis of gene-for-gene hypothesis; R-gene expression and transcription profiling, mapping and cloning of resistance genes and marker-aided selection, pyramiding of R genes.

# UNIT V

Biotechnology and disease management; development of disease resistance plants using genetic engineering approaches, different methods of gene

transfer, biosafety issues related to GM crops.

#### **Practical**

Protein, DNA and RNA isolation, Plasmids extraction, PCR analysis, DNA and Protein electrophoresis, bacterial transformation.

# PL PATH 605 PRINCIPLES AND PROCEDURES OF CERTIFICATION 1+0 Objective

To acquaint with certification procedures of seed and planting material.

# **Theory**

#### UNIT I

Introduction to certification. International scenario of certification and role of ISTA, EPPO, OECD etc. in certification and quality control.

#### UNIT II

Case studies of certification systems of USA and Europe. National Regulatory mechanism and certification system including seed certification, minimum seed certification standards. National status of seed health in seed certification. Methods for testing genetic identity, physical purity, germination percentage, seed health etc.

#### UNIT III

Fixing tolerance limits for diseases and insect pests in certification and quality control programmes. Methods used in certification of seeds, vegetative propagules and *in vitro* cultures. Accreditation of seed testing laboratories. Role of seed/ planting material health certification in national and international trade.

#### **Suggested Readings**

# PL PATH 606 PLANT BIOSECURITY AND BIOSAFETY 2+0

# **Objective**

To facilitate deeper understanding on plant biosecurity and biosafety issues in agriculture.

# **Theory**

# UNIT I

History of biosecurity, Concept of biosecurity, Components of biosecurity, Quarantine, Invasive Alien Species, Biowarfare, Emerging/resurgence of pests and diseases.

# **UNIT II**

National Regulatory Mechanism and International Agreements/Conventions viz., Agreement on Application of Sanitary and Phytosanitary (SPS) Measures/World Trade Organization (WTO), Convention on Biological Diversity (CBD), International Standards for Phytosanitary Measures, pest risk analysis, risk assessment models, pest information system, early warning and forecasting system, use of Global Positioning System (GPS) and Geographic Information System (GIS) for plant biosecurity, pest/disease and epidemic management, strategies for combating risks and costs associated with agroterrorism event, mitigation planning, integrated approach for biosecurity.

# **UNIT III**

Biosafety, policies and regulatory mechanism, Cartagena Protocol on Biosafety and its implications, Issues related to release of genetically modified crops.

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

# SOCIAL SCIENCES

Agricultural Economics
Agricultural Extension

Gujarat Agricultural Universities, Gujarat (Anand, Sardarkrushinagar, Navsari, Junagadh) May 2010

# **EXECUTIVE SUMMARY**

In Social Sciences Group, the course structure and course contents have been developed for three programmes namely Agri-Business Management, Agricultural Economics, and Agricultural Extension. Agri-business programme has been introduced for the very first time, while Agricultural Economics and Agricultural Extension programmes have been given new life by adding new courses and updating the others in tune with the changing time and future needs.

# **Agri-Business Management**

This, in true sense, is a job oriented programme. This will open new vistas for young agricultural graduates. They will find job opportunity in public and private sector companies on the one hand and on the other hand they may feel encouraged and equipped to start their own ventures.

- The programme provides ample job opportunities at managerial, executive and officer levels in both private and public sector undertakings.
- This programme will also prepare students to start their on ventures.
- Besides updating and inclusion of core courses from management stream, applied
  courses have been developed to take care of needs of various industries and
  stakeholders in agricultural sector.
- The provision of compulsory Summer Training/Industrial attachment will provide practical exposure of real life situations to students
- In order to help the students, Course objectives and Suggested readings have also been provided for each course.
- List of Journals have also been given to keep pace with latest developments in the area.

As this is a professional course; Guest lectures, Case Studies, Business Games, Role Plays, Exercises, Projects, Assignments, Presentations and Discussions etc.; are sine-quanon for the programme. For this, proper infrastructure, trained teachers, computers with internet connections, industrial linkages, guest lectures, industrial tours and plant visits will be required.

#### **Agricultural Economics**

In the area of Agricultural Economics an effort has been made to retain relevant core concepts and principles of Economics and Agricultural Economics as such. However, new topics and also new courses have been added to infuse new blood in the area.

- All the courses have been designed/redesigned/updated as per present and future needs.
- New courses have been introduced to keep pace with the latest developments.
- In order to help the students, Course objectives and Suggested readings have also been provided for each course.
- List of Journals have been provided to keep pace with latest developments in the area.
- Suggested Areas of Research have also been added for providing directions to future researches in the area

This programme also requires proper infrastructure, trained teachers, and computers with internet connections. Industrial linkages, guest lectures, industry and farm visits will also be required to provide real life exposure.

# **Agricultural Extension**

In order to keep pace with changing time and future needs, the courses in this area also have been redesigned and updated.

- New courses have been introduced to keep pace with the latest developments.
- In order to help the students, Course objectives and Suggested readings have also been provided for each course.
- List of Journals have also been given to keep pace with latest developments in the area.
- Suggested Areas of Research have also been added for providing directions to future researches in the area

This programme also requires proper infrastructure, trained teachers, and computers with internet connections. Equipment, Expert/Guest lectures, industry and farm and village visits will also be required to provide real life exposure to the students.

ABM 528	AGRIBUSINESS FINANCIAL MANAGEMENT	2
ABM 529	FOOD RETAIL MANAGEMENT	2
ABM 530	MANAGEMENT OF AGRICULTURAL INPUT MARKETING	2
ABM 531	FEED BUSINESS MANAGEMENT	2
ABM 532	AGRI-SUPPLY CHAIN MANAGEMENT	2
ABM 533	MANAGEMENT OF VETERINARY HOSPITALS	2
ABM 534	POULTARY AND HATCHERY MANAGEMENT	2
ABM 535	MANAGEMENT OF FLORICULTURE AND LANDSCAPING	2

<sup>\*</sup> The bifurcation of credit hours in theory, practical, tutorials etc. will be as per the need of the course and Institutes/Universities. In the courses where practical are not provided / possible, tutorials will be required (1 to 2 contact hours) depending on the course need to take care of case discussions / presentations / role plays / business games

<sup>\*\*</sup> To be completed in companies after the completion of 1st year (6-8 weeks) duration

<sup>\*\*\*</sup> Elective courses will be offered to the students in 2<sup>nd</sup> year of the programme, subject to Minimum of 10 credits and maximum

<sup>20</sup> credits. Institutions / Universities may club together similar elective courses to form specialized elective areas.

# ABM 501 PRINCIPLES OF MANAGEMENT AND ORGANIZATIONAL BEHAVIOUR

# **Objective**

To acquaint the learner with meaning and concepts of management and organizational behaviour. Focus will be on understanding the concepts, processes, significance, and role of management and organizational behaviour.

#### **Contents**

UNIT I

Nature, Scope and Significance of Management, Evolution of Management Thought, Approaches to Management, Functions of a Manager, Planning - Types, Steps, Course Objective, Process, Strategies, Policies, MBO, Strategic Planning Process, SWOT analysis, Organizing – Structure & Process, Line Staff, Authority & responsibility.

**UNIT II** 

Staffing – Selection process, Directing – Training, Communication & motivation, Controlling- Significance, Process, Techniques, Standards & Benchmarks, Management Audit.

UNIT III

Nature, Scope and Significance of Organizational Behavior; Evolution and Historical Background of Organizational Behavior; Models of Organizational Behaviour Foundations of individual behaviour, Diversity, Micro Organizational behavior - Personality, self-concept, self-esteem and Self-Efficacy; Attitudes, learning, Perception, Power – types & structures.

**UNIT IV** 

Motivation- Types of motivation: Maslow's need hierarchy and Vroom's expectancy theory. Theories of motivation, Applications of motivation. Transactional analysis-Johari window-self fulfilling prophecy, Interpersonal relations-understanding, determinants, and developing; leadership styles and influence process; leadership theories; types of leaders, and effective leader; group dynamics-, types of groups, group formation, Group decision making, Team Building.

UNIT V

Organizational culture or climate-concept, dimensions, ethos, determinants; organizational conflicts-concepts, sources, implications, and management; organizational changes - types, resistances to change, role of change agents.

# **Suggested Readings**

John W Newstrom & Keith Davis. 1997. *Human Behaviour at Work*. Tata McGraw.

Robert C Appleby. 1997. *Modern Business Administration*. Macmillan India. Stephen P Robbins 2007. *Organizational Behaviour*. Prentice Hall.

Stoner James AF. 2005. Management. Pearson Edu.

# ABM 502 AGRIBUSINESS ENVIRONMENT AND POLICY

#### **Objective**

To expose learners to the environment in which the agri-business is conducted. Focus will be on understanding micro and macro environmental forces and their impact on agri-business.

#### **Contents**

UNIT I

Role of agriculture in Indian economy; problems and policy changes relating to farm supplies, farm production, agro processing, agricultural marketing, agricultural finance etc. in the country.

UNIT II

Structure of Agriculture - Linkages among sub-sectors of the Agribusiness sector; economic reforms and Indian agriculture; impact of liberalization, privatization and globalization on Agri business sector.

**UNIT III** 

Emerging trends in production, processing, marketing and exports; policy controls and regulations relating to the industrial sector with specific reference to agro-industries.

**UNIT IV** 

Agribusiness policies- concept and formulation; and new dimensions in Agri business environment and policy.

UNIT V

Agricultural price and marketing policies; public distribution system and other policies.

# **Suggested Readings**

Adhikary M. 1986. *Economic Environment of Business*. S. Chand & Sons. Aswathappa K. 1997. *Essentials of Business Environment*. Himalaya Publ. Francis Cherunilam 2003. *Business Environment*. Himalaya Publ.

# ABM 503

#### MANAGERIAL ECONOMICS

# **Objective**

To familiarize the students with the fundamental economic concepts and principles in the context of managerial decision making.

#### **Contents**

UNIT I

Scope of managerial economics, objective of the firm and basic economic principles; mathematical concepts used in managerial economics.

UNIT II

Demand analysis - meaning, types and determinants of demand; demand function; demand elasticity; demand forecasting-need and techniques.

**UNIT III** 

Production, cost and supply analysis- production function, least-cost input combination, factor productivities and returns to scale, cost concepts, cost-output relationship, short and long-run supply functions.

**UNIT IV** 

Pricing-determinants of price - pricing under different market structures, pricing of joint products, pricing methods in practice, government policies and pricing.

UNIT V

The theory of national income & employment; circular flow of income: consumption, investment and saving: money-functions, demand & supply; inflation; economic growth; business cycles and business policies; business decisions under uncertainty.

# **Suggested Readings**

Baumol WJ. 1980. Economic Theory and Operations Analysis. Prentice Hall of India.

Craig PH & Chris LW. 1996. *Managerial Economics*. Prentice Hall of India. Dernberg TF. *et. al.* 1986. *Macro Economics: Concepts, Theories and Policies*. McGraw Hill.

Dwivedi DN. 2002. Managerial Economics. Vikash Publ.

Gupta GS. 1997. Managerial Economics. Tata McGraw Hill.

Koutsoyiannis A. 1989. Modern Micro Economics. Mac Millan Press.

#### ABM 504 MANAGERIAL ACCOUNTING AND CONTROL

## **Objective**

The objective of this course is to expose the learner to the concept and methods of financial and management accounting. Focus will be on understanding techniques, uses and applications of financial and management accounting.

#### **Contents**

UNIT I

Financial Accounting- Meaning, Need, Concepts and Conventions; Branches of Accounting, Internal and External Users of Accounting, Advantages and Limitations of Financial Accounting, Accounting Standards.

**UNIT II** 

The Double Entry System- Its Meaning and Scope, The Journal, Cash Book, Ledger, Trial Balance, Trading Account, Profit and Loss Account, Balance Sheet, Entries and Adjustments of different heads in different

Books and Accounts. Introduction of Company Accounts.

**UNIT III** 

Managing Accounting-Meaning, Functions, Scope, Utility, Limitations and Tools of Management Accounting, Analysis of Financial Statements- Ratios, Comparative and Common Size Statements, Cash Flow and Funds Flow Analysis, Management Audit and Financial.

**UNIT IV** 

Cost Accounting – Nature, Course Objective, Significance of Cost Accounting; Classification of Cost, Costing for Material, Labour, and Overheads; Marginal Costing and cost volume profit Analysis- Its Significance, Uses and Limitations; Standard Costing – Its Meaning, Uses and Limitations; Determination of Standard Cost, Variance Analysis- Material, Labour and Overhead.

UNIT V

Responsibility Accounting- Its Meaning and Significance, Cost, Profit and Investment Centres, Accounting for Price Level Changes- Concepts, CPP and CCA Methods. Budget and Budgetary Control- Its Meaning, Uses and Limitations, Budgeting and Profit Planning, Different Types of Budgets and their Preparations, Sales Budget, Purchase Budget, Production Budget, Cash Budget, Flexible Budget, Master Budget, Zero Based Budgeting.

# **Suggested Readings**

Khan MY & Jain PK. 2004. *Management Accounting*. Tata McGraw Hill. Maheshwari SN & Maheshwari SK. 2003. *Financial Accounting*. 3rd Ed. Vikas Publ. House.

#### ABM 505 COMMUNICATION FOR MANAGEMENT AND BUSINESS

# **Objective**

The course aims to make students proficient in written as well oral communication. The focus will be on business related communication.

#### **Contents**

UNIT I

Introduction to communication, Communication process, Barriers to Communication, Effective Communication, types of communication in organisations viz. Downward, Upward, Horizontal, Static Vs dynamic.

**UNIT II** 

Non-Verbal Communication, Communication through clothes/ colours / space/ symbol, Body language and etiquettes, Interpersonal Communication, Self-concept and communication, Assertive Communication.

**UNIT III** 

Types of business writing viz, News letters, Reports, Folders, Fact Sheets, Press release; Readership and writing style - human aspects of writing.

**UNIT IV** 

Meetings - Planning for meeting, tips for chairing, opening, progress & ending, Behavior of ordinary members, the character of business meeting, Energies for meetings, Group discussions, brain storming sessions and presentations.

**UNIT V** 

Handling personal communication - Letters, dictation, reading, problemsolving, listening skills, self-talk, self - reflection, steps to personal creativity, public speaking, Business etiquette.

# **Suggested Readings**

Bovee. 2008. Business Communication Today. 7th Ed. Pearson Edu.

Brown L. 2006. Communication Facts and Ideas in Business. Prentice Hall.

Lesikar. 2004. Basic Business Communication. McGraw Hill.

Ramchandran KK, Lakshmi KK & Karthik KK. 2007. Business

Communication. Macmillan.

# ABM 506 BUSINESS LAWS AND ETHICS

# **Objective**

The objective of this course is to expose the learner to various ethical issues and laws affecting business. Focus will be on understanding provisions of various business laws and also ethical practices to conduct the business properly.

#### **Contents**

UNIT I

Introduction to Indian legal system, The Indian Contract Act-1872: Contract-meaning, nature, significance, types of contract, essentials of a valid contract, offer and acceptance, capacity to contract, free consent, performance of contract.

**UNIT II** 

Companies Act-1956: incorporation, commencement of business, types of companies, management, winding of companies, Negotiable Instruments Act.

UNIT III

Essential Commodities Act, APMC Act, Consumer Protection Act, RTI Act, MRTP Act- major provisions and implications.

**UNIT IV** 

Factory Act, Labour laws, Industrial dispute Act.

**UNIT V** 

Nature and importance of ethics and moral standards; corporations and social

responsibilities, scope and purpose of business ethics; Ethics in business functional areas; industrial espionage; solving ethical problems; governance mechanism.

# **Suggested Readings**

Gulshan SS & Kapoor GK. 2003. Business Law including Company Law.

10th Ed. New Age Publ.

Kapoor ND. 2005. Business Law. S. Chand & Sons.

Tulsain PC. 2006 Business Law. Tata McGraw Hill.

Tuteja SK. 2005. Business Law for Managers. S. Chand & Sons.

#### ABM 507 MARKETING MANAGEMENT

# **Objective**

The objective of this course is to develop an understanding of the field of marketing. The focus will be on imparting knowledge of the basic concepts, tools, and functions of marketing.

#### **Contents**

UNIT I

The Concept of Marketing Management; Marketing Environment; Marketing Mix, Strategic Marketing, Market Segmentation, Targeting, and Positioning; Buyer Behavior, Marketing Information System, Marketing Organization and Control

UNIT II

Marketing potential and forecasting, Classification of Products; Product Life Cycle; New Product Development; Product Line and Product Mix; Branding, Packaging and labeling.

UNIT III

Factors affecting prices; Pricing Policies and Strategies; Pricing Methods.

**UNIT IV** 

Types of Distribution Channels; Functions of Channel Members; Channel Management Decisions.

**UNIT V** 

Promotion Mix; Introduction to Advertising, Personal Selling, Sales Promotion, Publicity and Public Relations. and Direct marketing, managing integrated marketing promotion, Customer Relationship Management.

# **Suggested Readings**

Brassington 1997. Marketing Management. Pitman Publ. House.

Kotler P. 2002. Marketing Management – Analysis, Planning,

Implementation and Control. Pearson Edu.

McCarthy 2003. Marketing Management. Tata McGraw-Hill.

Saxena R. 2002. Marketing Management. Mc Graw Hill.

Stanton WJ, Etzel MJ & Walker BJ. 1996. *Fundamentals of Marketing*. McGraw-Hill.

# ABM 508 HUMAN RESOURCE MANAGEMENT

# **Objective**

The objective of this course is to expose the learner to the field of human resource management. The focus will be on human resource practices and their utility for managers.

#### **Contents**

UNIT I

Introduction to Human Resources Management; Human Resource Planning-Nature and Significance, Job Analysis, Job Description, job Specification, Job

enlargement, Job enrichment, Job rotation, Job evaluation.

UNIT II

Recruitment and Selection Process, Induction, Training and Human Resource Development-Nature, Significance, Process and Techniques, Internal mobility including Transfers, Promotions, employee separation.

**UNIT III** 

Performance Appraisal – Significance and methods, Compensation management, Wage and Salary Administration - Course Objective; Wage Fixation; Fringe Benefits, Incentive Payment, bonus, and Profit Sharing.

**UNIT IV** 

Industrial Relations-Role and Status of Trade Unions; Collective Bargaining; Worker's Participation in Management, Career planning and employee retention.

UNIT V

Quality of work life, employee welfare measure, Disputes and grievance Handling Procedures; Arbitration and Adjudication; Health and Safety of Human Resources; Human Resources accounting, Human Resources outsourcing.

Unit-VI

Nature of e HRM - e HR - e HR activities - e Recruitment - e Selection - e Performance management - e Learning - e Compensation

# **Suggested Readings**

Ashwathapa K. 1997. Human Resource Management. Tata McGraw.

Flippo EB. 1984. Personnel, Management. McGraw-Hill.

Subba Rao P. 2004. Essentials of Human Resource Management and Industrial Relations. Himalaya Publ. House.

Venkantavatnam CS & Srivastav BK. 1991. Personnel Management and Human Resources. Tata McGraw-Hill.

# ABM 509 FINANCIAL MANAGEMENT

# **Objective**

The course aims to make students proficient in concepts and techniques of financial management. Focus will be on developing understanding of the application of Financial and investment decisions.

#### **Contents**

UNIT I

Introduction to Financial Management, Its meaning and functions, Interface of financial management with other functional areas of a business. Financial Statements and Analysis - Proforma Balance Sheet and Income Statements, ratio, time series, common size and Du-Pont analysis.

UNIT II

Capital Structure, Determinants of size and composition of Capital Structure, Capital Structure Theories; Long term financing and Cost of Capital.

**UNIT III** 

Working Capital Management, Determinants of Size and Composition of Working Capital, Cash and receivables management, Working Capital Management Theories, Financing of Working Capital.

**UNIT IV** 

Financial planning and Forecasting, Financial planning for mergers &

acquisition, Capital Budgeting, Undiscounted and Discounted cash flow methods of Investment Appraisal; Hybrid finance and lease finance.

**UNIT V** 

Business Financing System in India, Money and Capital Markets, Regional and All - India Financial Institutions; venture capital financing and its stages, micro finance and International financial management.

# **Suggested Readings**

Chandra P. 2000. Financial Management. Tata McGraw Hill.

Khan MY & Jain PK. 2004. Financial Management: Text, Problems and Cases. Tata McGraw Hill.

Pandey IM. 1997. Financial Management. Vikas Publ.

Ramachandran N & Kakani RK. 2005. *Financial Accounting for Management*. Tata McGraw Hill.

Van Horne JC. 1997. Financial Management and Policy. Prentice Hall.

#### ABM 510 PRODUCTION AND OPERATIONS MANAGEMENT

# **Objective**

The objective of this course is to expose the learner to the field of production and operations management. The focus will be on imparting knowledge of the basic concepts, tools, and functions of production management.

#### **Contents**

UNIT I

Nature and Scope of Production and Operations Management; Its relationship with Other Systems in the Organization; Factors Affecting System and Concept of Production and Operation Management; Facility

location, Types of Manufacturing Systems and Layouts, Layout Planning and Analysis.

**UNIT II** 

Productivity Variables and Productivity Measurement, Production Planning and Control, Mass Production, Batch Production, Job Order Manufacturing, Product Selection, Product Design and Development, Process Selection, Capacity planning.

UNIT III

Scheduling, Maintenance Management Concepts, Work Study, Method Study, Work Measurement, Work Sampling, Work Environment, Industrial Safety, UNIT IV

An Overview of Material Management, Determination of Material Requirement, Purchase Management, Store Management, Logistics management, Material Planning and Inventory management, JIT, Safety Management .

**UNIT V** 

Quality Assurance, Accepting Sampling, Statistical Process Control, Total Quality Management, ISO standards and their Importance, Introduction to reengineering, value engineering.

#### **Suggested Readings**

Adam & Ebert. 2006. *Production and Operations Management: Concepts, Models and Behaviour.* 5th Ed. Prentice Hall of India.

Buffa ES. 2008. *Modern Production/Operations Management*. Wiley India. Stevenson WJ. 2005. *Operations Management*. Tata McGraw Hill.

#### ABM 511 RESEARCH METHODOLOGY IN BUSINESS MANAGEMENT

# **Objective**

The objective of this course is to develop an understanding of research methodology. The focus will be on process and techniques of research.

#### **Contents**

UNIT I

Meaning, Course Objective, types, and process of research; research methodology in management- exploratory, descriptive, experimental, diagnostic, Problem formulation, setting of Course Objective, formulation of hypotheses.

**UNIT II** 

Scales of measurement - nominal, ordinal, interval, ratio, Likert scale and other scales; Primary and secondary data, sources of data, instruments of data collection, data editing, classification, coding, validation, tabulation, presentation, analysis.

**UNIT III** 

Concept of Sampling, Probability and non-probability sampling techniques including Simple Random Sampling, Stratified Sampling, Multi-stage Sampling, Systematic Sampling, Purposive Sampling, Quota sampling, judgment sampling, and convenience sampling, sample size determination, sampling and non-sampling errors.

**UNIT IV** 

Role and uses of quantitative techniques in business decision making, Use of Equations, Use of Determinants and Matrices in business decisions, Frequency Distribution, Measures of Central Tendency, Measures of Variation, Skewness and Kurtosis, Simple, partial, and multiple correlation,

rank correlation, simple and multiple regression, Discriminant and dummy variable analysis.

UNIT V

Index Numbers, Hypothesis testing, ANOVA, Factor analysis, cluster analysis, conjoint analysis, multi-dimensional analysis etc, Report writing: Types of report, essentials and contents of good report writing.

# **Suggested Readings**

Cooper DR & Schindler PS. 2006. *Marketing Research Concepts and Cases*. Tata McGraw Hill.

Green PE, Tull DS & Albaum G. 1998. Research for Marketing Decisions. Prentice Hall of India.

Kothari CR. 1989. Research Methodology. Wiley Eastern.

Wilkinson & Bhandarker 1989. *Research Methods in Social Sciences*. Himalaya Publ. House.

# ABM 512 PROJECT MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT

# **Objective**

The objective of this course is to expose the learner to the fields of project management and entrepreneurship development. Focus will be to train the students to develop new projects and encouraging them to start their own ventures.

#### **Contents**

UNIT I

Concept, characteristics of projects, types of projects, project identification, and Project's life cycle.

UNIT II

Project feasibility- market feasibility, technical feasibility, financial feasibility, and economic feasibility, social cost-benefit analysis, project risk analysis.

**UNIT III** 

Network Methods: Meaning, Network Analysis, Requirements for Network Analysis, Critical Path Method (CPM), Programme Evaluation and Review Technique (PERT), Project scheduling and resource allocation.

**UNIT IV** 

Financial appraisal/evaluation techniques- discounted/non-discounted cash flows; Net present values, profitability index, Internal rate of returns; Cost benefits ratio; Accounting rate of return, Pay back period, Project implementation; Cost over run, Project control and information system.

UNIT V

Entrepreneurship, Significance of entrepreneurship in economic development qualities of entrepreneur, entrepreneurship development programs and role of various institutions in developing entrepreneurship, life cycles of new business, environmental factors affecting success of a new business, reasons for the failure and visible problems for business, Developing effective business plans, Procedural steps in setting up of an industry.

# **Suggested Readings**

Chandra P. 2005. Project Management. Tata McGraw Hill.

Gopal Krishan P & Nagarajan K. 2005. Project Management. New Age.

Hisrich RD & Peters MP. 2002. Entrepreneurship. Tata McGraw Hill.

Kaplan JM. 2003. Patterns of Entrepreneurship. John Wiley & Sons.

Nandan H. 2007. Fundamentals of Entrepreneurship Management. Prentice Hall.

Ramamoorthy VE. 2005. Textbook of Project Management. MacMillan.

#### ABM 513 COMPUTERS FOR MANAGERS

#### **Objective**

The course objective is to acquaint the students with the knowledge and use of computers and simple applications of computers in managerial decisions. Effort will also be made to provide them an orientation about the increasing role of computers in corporate/business world.

# **Contents**

UNIT I

Concept of Computers- Brief History of Computers, Generation and Its Evolution, Characteristics of Computers, Hardware and Software, introduction to computer languages, Main Areas of Computers and their Applications; Types of Computers – Analog, Digital, Hybrid, General Purpose and Special Purpose Computers, Micro Computers, Mini- Computers, Main-frame Computers, and Super Computers.

**UNIT II** 

Input-Output Devices, Storage Units (Disks, CD-ROM, DVD-ROM, Blue Ray Disk and tapes), Memory Types (Cache, RAM, ROM), Memory Units, Generation and types of Microprocessor.

**UNIT III** 

Data and Information – Data Definition, Data Processing Systems, Data Type Numeric, Alphabetic, Audio, Graphic, and Video and Their Presentation; Data Processing- Introduction to Data Processing, Computer

as a Tool For Data Processing, Data Processing Cycle, Data Processing Techniques, Data Analysis, Data Inputs and Outputs, Data Processing Management, , Data Security.

**UNIT IV** 

Introduction to Operating Systems, MS Windows, and UNIX, MS Office (MS Word, MS Power Point, MS Excel, MS-Access and use of various management software's Like SPSS.

UNIT V

Introduction to LAN, WAN, MAN, internet and search engines; Introduction to agri-portals like agriwatch.com, agmarknet.nic.in, echaupal.com

# **Suggested Readings**

Lucas. 2004. Information Technology for Management. McGraw Hill.

Norton P. 1998. Introduction to Computers. 2nd Ed. Tata McGraw Hill.

Rajaraman V. 2006. *Introduction to Information Technology*. Prentice Hall of India.

#### ABM 514 MANAGEMENT INFORMATION SYSTEMS

#### **Objective**

The objective of this course is to develop an understanding and utility of MIS. The focus will be on imparting knowledge of the basic concepts, development, functions and usage of MIS.

#### **Contents**

UNIT I

The concept of MIS – Definition, importance, Course Objective, prerequisites, advantages and challenges; Information Needs of organization, MIS and Decision – Making.

UNIT II

Types/Classification of Information System for organizations – Office Automation Systems, Transaction Processing Systems, Decision Support System, Executive Support System, Knowledge Based Expert System.

UNIT III

Applications of MIS in the areas of Human Resource Management, Financial Management, Production/Operations Management, Materials Management, Marketing Management.

UNIT IV

Development of MIS for an organization – The concept and stages of System Development Life Cycle.

UNIT V

Information Technology– concept, applications, advantages and prerequisites, Choice of Information Technology, Social and Legal Dimension of IT.

# **Suggested Readings**

James O'Brien 1999. *Management Information System*. Tata McGraw-Hill. Lauden & Lauden. 2003. *Management Information System*. Pearson Edu.

#### ABM 515 OPERATIONS RESEARCH

# **Objective**

The objective of this course is to acquaint the learner with the applications of some important Operations Research techniques. Focus will be on understanding the use of these techniques in solving business problems.

# **Contents**

UNIT I

Linear Programming: Objective, Assumptions, Formulation of Linear Programming Problem, Graphic Method, Simplex method, Transportation and Assignment Problems.

UNIT II

Inventory control Models: Costs Involved in Inventory Management, Types of Inventory, Economic Order Quantity (EOQ) Model, Continuous Review (Q) System, Periodic Review (P) System, Hybrid System, Simulation.

UNIT III

Waiting Line Models: Waiting Line Problem, Characteristics of a Waiting-Line System, Single- Channel Model, Multiple-Channel Model, Constant-Service Time Model, Finite Population Model, Sequencing and Replacement models.

**UNIT IV** 

Decision making under Risk and uncertainties, Decision problem, Maximax Criterion, Maximin Criterion, Minimax Regret Criterion, Laplace Criterion, Pay off Tables, Decision Trees, Expected Value of perfect Information.

**UNIT V** 

Game Theory - Two -Person Zero-Sum Game, Simulation, Network analysis – PERT & CPM.

# **Suggested Readings**

Cook TM & Russell RA. 1989. *Introduction to Management Science*. Prentice Hall.

Taha HA. 2005. Operations Research - An Introduction. Prentice Hall.

Vohra ND. 2006. Quantitative Techniques in Management. McGraw Hill.

Wagner HM. 2005. Principles of Operation Research. Prentice Hall.

## ABM 516 RURAL MARKETING

# **Objective**

To objective of this course is to develop understanding regarding issues in rural markets like marketing environment, consumer behaviour, distribution channels, marketing strategies, etc.

#### **Contents**

UNIT I

Concept and scope of rural marketing, nature and characteristics of rural markets, potential of rural markets in India, rural communication and distribution.

UNIT II

Environmental factors - socio-cultural, economic, demographic, technological and other environmental factors affecting rural marketing.

UNIT III

Rural consumer's behaviour - behavior of rural consumers and farmers; buyer characteristics and buying behaviour; Rural v/s urban markets, customer relationship management, rural market research.

**UNIT IV** 

Rural marketing strategy - Marketing of consumer durable and non-durable goods and services in the rural markets with special reference to product planning; product mix, pricing Course Objective, pricing policy and pricing strategy, distribution strategy.

UNIT V

Promotion and communication strategy - Media planning, planning of distribution channels, and organizing personal selling in rural market in India, innovation in rural marketing.

# **Suggested Readings**

Krishnamacharyulu C & Ramakrishan L. 2002. *Rural Marketing*. Pearson Edu. Ramaswamy VS & Nanakumari S. 2006. *Marketing Management*. 3rd Ed.

MacMillan Publ.

Singh AK & Pandey S. 2005. *Rural Marketing*. New Age. Singh Sukhpal. 2004. *Rural Marketing*. Vikas Publ. House.

# ABM 517 AGRICULTURAL MARKETING MANAGEMENT

# **Objective**

The objective of this course is to give the students an understanding of concept, various policies, strategies and decisions relating to marketing that can be developed by agribusiness firms.

#### **Contents**

UNIT I

Meaning and scope, agricultural marketing and economic development; Agricultural market structure – meaning, components and dynamics of market structure; marketing strategy – meaning & significance, formulation of marketing strategy; agribusiness marketing environment, design of marketing mix, market segmentation and targeting, determinants of consumer's behaviour.

**UNIT II** 

Product management - product management process and decisions, new product development - significance and classification of new product, stages and estimation of demand of new product; product life cycle.

UNIT III

Pricing policies and practice for agribusiness - determinants of price, objectives of pricing policies and pricing methods.

**UNIT IV** 

Promotional management - advertising planning and execution; sales promotion; grading and standardization.

UNIT V

Distribution management - storage and warehousing and transportation management for agricultural products; marketing agencies/intermediaries - roles and functions; distribution channels involved in agribusiness.

# **Suggested Readings**

Acharya SS & Agarwal NL. 2004. *Agricultural Marketing in India*. 4th Ed. Oxford & IBH.

Kohls RL & Uhj JN. 2005. *Marketing of Agricultural Products*. 9th Ed. Prentice Hall.

Kotler P. 2002. *Marketing Management – Analysis, Planning, Implementation and Control*. Pearson Edu.

Krishnamacharyulu C & Ramakrishan L. 2002. *Rural Marketing*. Pearson Edu. Ramaswamy VS & Nanakumari S. 2002. *Marketing Management*. 2nd Ed. Mac Millan India.

# ABM 518 FOOD TECHNOLOGY AND PROCESSING MANAGEMENT

# **Objective**

The objective of this course is to acquaint the students with different food processing techniques and their management.

#### **Contents**

UNIT I

Present status of food industry in India; Organization in food industry; Introduction to operations of food industry; Deteriorative factors and hazards during processing, storage, handling and distribution.

#### **UNIT II**

Basic principles of food processing and food preservation by manipulation of parameters and factors and application of energy, radiations, chemicals and biotechnological agents; Packaging of foods.

**UNIT III** 

Quality Management: TQCM (Total quality control management), control of raw materials, process and finished products, quality standards: BIS, PFA, HACCP, ISO etc., Food plant sanitation

**UNIT IV** 

Analysis of costs in food organization; Risk management- Post Harvest process, losses and management for loss reduction, Management for value addition in food products, Laws and regulations related to food industry and food production and marketing; Quality management – quality standards, PFA, ISO, etc.

UNIT V

Case studies on project formulation in various types of food industries – milk and dairy products, cereal milling, oil-seed and pulse milling, sugarcane milling, honey production, baking, confectionery, oil and fat processing, fruits and vegetable storage and handling, processing of fruits and vegetables, egg, poultry, fish and meat handling and processing, etc.

## **Suggested Readings**

Acharya SS & Aggarwal NL. 2004. Agricultural Marketing in India. Oxford & IBH.

Early R. 1995. Guide to Quality Management Systems for Food Industries. Blackie.

Jelen P. 1985. Introduction to Food Processing. Reston Publishing.

Potly VH & Mulky MJ. 1993. Food Processing. Oxford & IBH.

#### ABM 519 FERTILIZER TECHNOLOGY AND MANAGEMENT

## **Objective**

The objective of this course is to acquaint the students in latest advances in fertilizer technology management.

## **Contents**

UNIT I

Fertilizer development – concept, scope, need, resource availability; import and export avenues for fertilizer; types of fertilizers, grading and chemical constituents, role of fertilizers in agricultural production, production and consumption of fertilizer in India.

**UNIT II** 

Calculation related to fertilizer required based on nutrient requirement, Economics of fertilizer use, Disparities in fertilizer use, optimization of fertilizer use, constraints to fertilizer use, Trends in fertilizer use – Time, region, crop climate, season, technology, policy – mediated trends in fertilizer use

**UNIT III** 

Raw material needed and principles of manufacturing of nitrogenous, phosphatic and potassic fertilizers, secondary nutrient sources and micronutrient formulations.

UNIT IV

Production efficiency and capacity utilization; quality control and legal aspects- fertilizer control order.

**UNIT V** 

Testing facilities; constraints in fertilizer use and emerging scenario of fertilizer use; assessment of demand and supply of different fertilizers, fertilizer distribution, fertilizer storage.

UNIT VI

Field trials and demonstration, fertilizer pricing policy, **Subsidy**; scope of biofertilizer; environmental pollution due to fertilizer use.

**UNIT VII** 

WTO & agro-chemical industry

## **Suggested Readings**

Brady NC & Weil RR. 2002. *The Nature and Properties of Soils*. 13th Ed. Pearson Edu.

Fertilizer Control Order (different years). Fertilizer Association of India, New Delhi.

Fertilizer Statistics (different years). Fertilizer Association of India, New Delhi Indian Journal of Fertilizers (different years). Fertilizer Association of India, New Delhi.

San Chilli V. 1960. *Chemistry and Technology of Fertilizers*. American Chemical Soc. Monograph Series. Reinhold Publ. Corp.

Tisdale SL, Nelson WL, Beaton JD & Havlin JL. 2002. *Soil Fertility and Fertilizers*. 5th Ed. Prentice Hall.

#### ABM 520 MANAGEMENT OF AGRO CHEMICAL INDUSTRY

## **Objective**

To familiarize the students with the agrochemicals, their structure, classification and development and also how to manage the agro-chemical industries.

#### **Contents**

UNIT I

Agro-chemicals: Definition and classification; Basic knowledge of agrochemicals; role and status of agro-chemical industry in India; Pesticides – Classification and Introduction, knowledge of different pesticides.

UNIT II

Insecticides – Definition and classification based on (a) Mode of Entry (b) Mode of Action and (c) Chemical Structure with example; Insecticidal formulation; preliminary knowledge of mode of action of insecticides; knowledge of plant protection equipments.

UNIT III

Fungicides – Classification and preliminary knowledge of commonly used fungicides; Biomagnifications of pesticides and pesticidal pollution.

UNIT IV

Introductory knowledge about development of agro-chemicals; Insecticidal poisoning, symptoms and treatment; Main features of Insecticide Act.

UNIT V

Directorate of Plant Protection, Quarantine and Storage – A brief account of its organizational set up and functions; IPM Concept – Bio-pesticides – Plant products.

UNIT VI

WTO & agro-chemical industry

#### **Suggested Readings**

Dhaliwal GS, Singh R & Chhillar BS. 2006. Essentials of Agricultural Entomology. Kalyani.

Hayes WT & Laws ET. 1991. Hand Book of Pesticides. Academic Press.

Matsumura F. 1985. *Toxicology of Insecticides*. 2nd Ed. Plenum Publ. Rajeev K & Mukherjee RC. 1996. *Role of Plant Quarantine in IPM*. Aditya Books.

## 521 FARM BUSINESS MANAGEMENT Objective

To acquaint the students with the basic principles of farm management dealing with the analysis of farm resources having alternatives within the framework of resource restrictions.

## **Contents**

UNIT I

Nature, scope, characteristics and role of farm business management; farm management decisions; farm management problems.

UNIT II

Principles of farm management decisions – principle of variable proportion, cost principle, principle of factor substitution, law of equi-marginal returns, opportunity cost principle, etc.

**UNIT III** 

Tools of farm management and farm business analysis - farm planning and budgeting; Farm records and accounts, types and problems in farm records and accounts, net worth statement, farm efficiency measures., Methods of valuation, Cost concepts & estimation of cost of cultivation / production.

**UNIT IV** 

Management of farm resources – Land, Labour, Farm machinery, Farm building, etc.

UNIT V

Risk and uncertainty in farming -sources of uncertainty in farming, management strategy to counteract uncertainty and decision making process in farm business management under risks and uncertainty.

## **Suggested Readings**

Heady EO & Jensen H. 1960. Farm Management Economics. Prentice Hall.

Johl SS & Kapoor TR. 1973. Fundamentals of Farm Business Management. Kalyani Publ.

Kahlon AS & Singh K. 1992. *Economics of Farm Management in India*. Allied Publ.

Panda SC. 2007. Farm Management & Agricultural Marketing. Kalyani Publ.

## ABM 522 SEED PRODUCTION TECHNOLOGY AND MANAGEMENT

#### **Objective**

To apprise students regarding principles and efficient management of seed production technology.

#### **Contents**

UNIT I

Seed Technology – Role of Seed Technology, its Course Objective and goal, Seed Industry in India, National Seed Corporation – Tarai Seed Development Corporation, State Seed Corporations, National Seed Project and State Farms and their role.

UNIT II

Development and Management of Seed Programmes – Seed Village Concept, Basic Strategy of Seed Production and Planning and Organization of Seed Programme; Types of Seed Programme – Nucleus seed, Breeders seed, Foundation seed and Certified seed etc.

UNIT III

Maintenance of genetic purity – Minimum seed certification standard and Management of breeders & Nucleus seed; Management of seed testing laboratory and research and development.

UNIT IV

Management of seed processing plant, seed storage management; seed packaging and handling.

**UNIT V** 

Seed Marketing; GM Crop seed, IPR, PBR, Patents and related issues and their impact on developing countries; Statutory intervention in the seed industry; Seed legislation and seed law enforcement, Seed act; Orientation and visit to seed production farms, seed processing Units, NSC, RSSC,

RSSCA and seed testing laboratories.

**UNIT VI** 

WTO and Seed Industry

## **Suggested Readings**

Agrawal RL. 1997. Seed Technology. Oxford & IBH.

Desai BB, Katecha PM & Salunkhe DK. 1997. Seed Handbook: Biology, Production, Processing and Storage. Marcel Dekker.

Kelly A. 1988. Seed Production of Agricultural Crops. Longman.

McDonald MB Jr. & Copeland LO. 1997. Seed Production: Principles and Practices. Chapman & Hall.

Thompson JR. 1979. An Introduction to Seed Technology. Leonard Hill.

## ABM 523 TECHNOLOGY MANAGEMENT FOR LIVESTOCK PRODUCTS

## **Objective**

To impart knowledge about management of livestock products, product development, quality control, preservation and marketing strategies for livestock products.

#### **Contents**

UNIT I

Present status of livestock products industry in India – dairy, meat poultry, skin, hides, wool, etc; Dairy Products- Manufacturing technologies of various dairy products and by-product utilization.

UNIT II

Meat and Poultry Products- Manufacturing technologies of meat and meat products, egg and poultry products; production processing and utilization of wool and animal by-products.

**UNIT III** 

Plant Management- Production planning and control needs and techniques of production control, packaging, preservation and storage system for livestock products; transportation system for domestic markets and international markets. Value addition in dairy products

UNIT IV

Quality control measures during storage and transit; extent of losses during storage and transport, management measures to minimize the loss.

UNIT V

Marketing and distribution of animal products; quality standard for various products; environmental and legal issues involved, Local authority's regulations regarding transportation and shipment of animals meat.

**UNIT VI** 

WTO and meat, dairy Industry, WHO/international laws/requirements for human foods (dairy and meat).

## **Suggested Readings**

## ABM 524 FRUIT PRODUCTION AND POST HARVEST MANAGEMENT

## **Objective**

To impart knowledge regarding agro-techniques of fruit crops and their post-harvest management.

#### **Contents**

UNIT I

World production and horticulture in India; present status of fruit industry in India and emerging scenario.

**UNIT II** 

Management of horticultural crops – establishing an orchard, basic cultural practices, regulation of flowering, fruiting and thinning, protection against insect-pest, weeds: pre and post harvest management for quality and shelf life.

UNIT III

Post harvest management in horticulture- procurement management, important factors for marketing, standardization and quality control, packaging.

**UNIT IV** 

Post harvest management in horticulture- development of fruit-based carbonated drinks, development of dehydrated products from some important fruits, storage of pulp in pouches, essential oils from fruit waste, dehydrated fruits. Market structure and export potential of fruits.

UNIT V

Problems in marketing of fruits, and government policy; quality standards for domestic and international trade.

#### **Suggested Readings**

Chadha KL & Pareek OP. 1993. *Advances in Horticulture*. Vols. I-IV. Malhotra Publ. House.

Kader AA. 1992. *Post-harvest Technology of Horticultural Crops*. Univ. of California. Div. of Agri. & Natural Resources.

#### ABM 525 FARM POWER & MACHINERY MANAGEMENT

#### **Objective**

To acquaint the students with the farm mechanization status in the country and various techniques for farm machinery management and marketing.

#### **Contents**

Various sources of farm power, their availability and utilization; Course Objective, importance, present status, level and the scope of farm

mechanization.

UNIT II

Tractor and power tillage industry – model, make, capacity, production. **Present status of energy use, alternative energy use on farm and future requirement**; concept of zero tillage.

**UNIT III** 

Farm machinery selection for different size farm and for different agroclimatic conditions and **Cropping pattern**; scheduling of farm operations higher efficiencies, indices of machine performance.

**UNIT IV** 

Cost analysis of operations for different implements **on time and area basis**, Economic performance of machines, optimization of tractor implements system and transport of farm produce.

**UNIT V** 

Agricultural equipments industry production, marketing and constraints; establishment of agricultural engineering enterprises (agro service centers, etc.).

**UNIT VI** 

WTO and Farm power & Machinery Industry

## **Suggested Readings**

Carville LA. 1980. *Selecting Farm Machinery*. Louisiana Coop. Extn. Service Publ.

FAO 1984. Agricultural Engineering in Development: Selection of Mechanization. Agric. Service Bull.

Hunt D. 1977. Farm Power and Machinery Management. Iowa State Univ. Press.

Waters WK. 1980. Farm Machinery Management Guide. Pennsylvania Agric. Extn. Service Spl. Circular No. 1992.

## ABM 526 INTERNATIONAL TRADE AND SUSTAINABILITY GOVERNANCE

## **Objective**

To impart knowledge to the students of international trade in agriculture and various provisions under WTO in the new trade regime.

#### **Contents**

UNIT I

International trade – basic concepts, WTO and its implications for Indian economy in general and agriculture sector in particular.

**UNIT II** 

TRIPS, TRIMS quotas, anti dumping duties, quantitative and qualitative restrictions, tariff and non-tariff measures, trade liberalization, subsidies, green and red boxes, issues for negotiations in future in WTO; CDMs and carbon trade.

**UNIT III** 

Importance of foreign trade for developing economy; absolute and comparative advantage, foreign trade of India. Role of organizations in foreign trade.

**UNIT IV** 

Composition of India's foreign trade policy; India's balance of payments; inter regional Vs international trade; tariffs and trade control; exchange rate; the foreign trade multiplier.

**UNIT V** 

Foreign demand, supply side analysis, opportunity cost, trade and factor prices, implications for developing countries, market entry methods, export - Import

procedures and documentations.

## **Suggestive Readings**

Chadha GK. 2003. WTO and Indian Economy. Deep & Deep.

Economic Survey of India. Ministry of Finance, Govt. of India. (various issues) HAU 2003. Refresher Course on Technological Interventions to Face WTO Challenges. AAREM & HRD CCS HAU Hisar.

Indian Journal of Agricultural Economics

Vasisht AK & Singh Alka. 2003. WTO and New International Trade Regime-Implication for Indian Agriculture. Advance Publ. Concept.

## ABM 527 MANAGEMENT OF AGRIBUSINESS COOPERATIVES

## **Objective**

To provide the students an understanding about the agribusiness cooperative organizations and their management.

#### **Contents**

UNIT I

Cooperative administration- a global perspective, ecology of cooperative administration, cooperative sector and economic development. Challenges before agri business cooperatives in the emerging global business environment. UNIT II

Cooperative management- nature, functions and purpose of cooperatives – procurement, storage, processing, marketing, process of cooperative formation, role of leadership in cooperative management.

**UNIT III** 

The state and cooperative movement, effects of cooperative law in management, long range planning for cooperative expansion, policy making. UNIT IV

Human resource management, placement and role of board of directors in cooperative management. Accountability of board of directors and professional managers (CEOs) in co-operatives

**UNIT V** 

Overview of agribusiness cooperative – credit cooperatives, cooperative marketing, dairy cooperative, horticultural cooperative; financing agribusiness cooperative.

## **Suggested Readings**

Akmat JS. 1978. New Dimensions of Cooperative Management. Himalaya Publ. House.

Ansari AA. 1990. Cooperative Management Patterns. Anmol Publ.

Sah AK. 1984. Professional Management for the Cooperatives. Vikas Publ. House.

#### ABM 528 AGRIBUSINESS FINANCIAL MANAGEMENT

## **Objective**

To impart trainings to the students regarding various aspects of financial management for agribusiness.

## Contents

UNIT I

Importance, need and scope of financial management; classification and credit need in changing agriculture scenario; finance functions, investment financing; balance sheet, income statement, cash flow statement for agribusiness.

**UNIT II** 

Financial planning and control – assessment of financial requirement of a

agribusiness unit; leverage – concept of leverage, financial and operating leverage; factor affecting capital structure, features of an optimal capital structure.

**UNIT III** 

Working capital management – concept and components of working capital, need for working capital in agribusiness, management of cash and accounts receivables, and inventory for agribusiness.

**UNIT IV** 

Capital budgeting - steps and concept of capital budgeting, appraisal criteria – payback period, average rate of return, net present value, benefit cost ratio and internal rate of return.

**UNIT V** 

Agri-business financing system in India - functioning of cooperative credit institutions, commercial banks, regional rural banks, NABARD, Agro-Industries Corporation, etc in agribusiness financing.

## **Suggested Readings**

Chandra P. 2000. Financial Management. Tata McGraw Hill.

Khan MY & Jain PK. 2004. Management Accounting. Tata McGraw Hill.

Pandey IM. 1997. Financial Management. Vikas Publ. House.

## ABM 529 FOOD RETAIL MANAGEMENT

## **Objective**

The objective of this course is to assist students in understanding the structure and working of food marketing system in India, to examine how the system affects farmers, consumers and middlemen and to illustrate the response of this dynamic marketing system to technological, socio-cultural, political and economic forces over time.

#### **Contents**

UNIT I

Introduction to International Food market, India's Competitive Position in World Food Trade, Foreign Investment in Global Food Industry, Retail management and Food Retailing, The Nature of Change in Retailing, Organized Retailing in India, E-tailing and Understanding food preference of Indian Consumer, Food consumption and Expenditure pattern, Demographic and Psychographic factors affecting Food Pattern of Indian Consumer.

**UNIT II** 

Value Chain in Food Retailing, Principal trends in food wholesaling and retailing, food wholesaling, food retailing, the changing nature of food stores, various retailing formats, competition and pricing in food retailing, market implications of new retail developments, value chain and value additions across the chain in food retail, food service marketing.

UNIT III

4 P's in Food Retail Management, Brand Management in Retailing, Merchandise pricing, Pricing Strategies used in conventional and nonconventional food retailing, Public distribution system, Promotion mix for food retailing, Management of sales promotion and Publicity, Advertisement Strategies for food retailers.

**UNIT IV** 

Managing Retail Operations, Managing Retailers' Finances, Merchandise buying and handling, Merchandise Pricing, Logistics, procurement of Food products and Handling Transportation of Food Products.

UNIT V

Retail Sales Management Types of Retail Selling, Salesperson selection, Salesperson training, Evaluation and Monitoring, Customer Relationship Management, Managing Human Resources in retailing, Legal and Ethical issues in Retailing.

## **Suggested Readings**

Berman & Evans. 2008. *Retail Management: A Strategic Approach*. 10<sup>th</sup> Ed. Prentice Hall of India.

Cox. 2006. Retailing: An Introduction. 5th Ed. Pearson Edu.

Levy M & Weitz BW. 2004. Retailing Management. 5th Ed. McGraw Hill.

## ABM 530 MANAGEMENT OF AGRICULTURAL INPUT MARKETING

## **Objective**

The objective of this course is to give the students an understanding of different marketing concept and marketing system in context of agricultural inputs.

#### **Contents**

UNIT I

Agricultural input marketing – meaning and importance; Management of distribution channels for agricultural input marketing; Agricultural Inputs and their types – farm and non-farm, role of cooperative, public and private sectors in agri- input marketing.

UNIT II

Seed- Importance of seed input; Types of seeds- hybrid, high yielding and quality seeds; Demand and supply of seeds; Seed marketing channels, pricing, export-import of seeds; Role of NSC and State Seed Corporation.

**UNIT III** 

Chemical Fertilizers- Production, export-import, supply of chemical fertilizers, Demand/consumption, Prices and pricing policy; subsidy on fertilizers; marketing system – marketing channels, problems in distribution; Role of IFFCO and KRIBCO in fertilizer marketing.

**UNIT IV** 

Plant Protection Chemicals- Production, export/import, consumption, marketing system – marketing channels; Electricity/Diesel Oil- marketing and distribution system; pricing of electricity for agriculture use; subsidy on electricity.

UNIT V

Farm Machinery- Production, supply, demand, Marketing and distribution channels of farm machines; Agro-industries Corporation and marketing of farm machines / implements/Equipments.

**UNIT VI** 

WTO and agricultural inputs.

## **Suggested Readings**

Acharya SS & Agarwal NL. 2004. *Agricultural Marketing in India*. 4th Ed. Oxford & IBH.

Broadway AC & Broadway Arif A. 2003. A Text Book of Agri-Business Management. Kalyani.

Singh AK & Pandey S. 2005. Rural Marketing. New Age.

Singh Sukhpal 2004. Rural Marketing- Focus on Agricultural Inputs. Vikas Publ. House.

#### ABM 531 FEED BUSINESS MANAGEMENT

#### **Objective**

To acquaint the students with the role and importance of feed industry and the

production of feed for livestock and poultry.

#### **Contents**

UNIT I

Present status of feed resources; gap between demand and availability of nutrients; status of feed industry in India and world, constraints in the development of Indian feed industry.

UNIT II

Nutrients requirements of livestock and poultry; feed stuff and their origin; scientific storage of feeds and feed ingredients; protection of protein and fat, Pro-biotic in feeds

**UNIT III** 

Processing of feeds, layout and design of feed plants, feed plant management; feed preparation for fish and pet animals, specialty feeds.

**UNIT IV** 

Importance and preparation of mineral mixture; feed additives and supplements, feed mixing, principles of mixing and compounding of feeds; improving the feeding value of poor quality roughages. Significance of quality control.

**UNIT V** 

Distribution channels, regulations relating to manufacture and sale of feed stuffs.

UNIT VI

WTO and Feed Industry

## **Suggested Readings**

Gohl BO. 1981. Tropical Feeds. FAO.

McEllihnery Robert R. 1994. *Feed Manufacturing Technology*. American Feed Industry Assoc.

Pfost Harry B. 1976. Feed Manufacturing Technology. American Feed Industry Assoc.

Rajgopalan K. Feed Industry Red Book. ZMAG Publication.

Rajgopalan K. 1989. Storage Structures. Oxford & IBH.

#### ABM 532 AGRI SUPPLY CHAIN MANAGEMENT

## **Objective**

The course introduces students to the concepts and processes of agricultural supply chain management, framework for structuring supply chain drivers; network designs, demand forecasting, inventory planning, sourcing decisions and IT enablement of supply chain.

#### **Contents**

UNIT I

Supply Chain: Changing Business Environment; SCM: Present Need; Conceptual Model of Supply Chain Management; Evolution of SCM; SCM Approach; Traditional Agri. Supply Chain Management Approach; Modern Supply Chain Management Approach; Elements in SCM.

UNIT II

Demand Management in Supply Chain: Types of Demand, Demand Planning and Forecasting; Operations Management in Supply Chain, Basic Principles of Manufacturing Management.

## **UNIT III**

Procurement Management in Agri. Supply chain: Purchasing Cycle, Types of Purchases, Contract/Corporate Farming, Classification of Purchases Goods or Services, Traditional Inventory Management, Material Requirements Planning, Just in Time (JIT), Vendor Managed Inventory

(VMI). UNIT IV

Logistics Management: History and Evolution of Logistics; Elements of Logistics; Management; Distribution Management, Distribution Strategies; Pool Distribution; Transportation Management; Fleet Management; Service Innovation; Warehousing; Packaging for Logistics, Third-Party Logistics (TPL/3PL); GPS Technology.

UNIT V

Concept of Information Technology: IT Application in SCM; Advanced Planning and Scheduling; SCM in Electronic Business; Role of Knowledge in SCM; Performance Measurement and Controls in Agri. Supply Chain Management- Benchmarking: introduction, concept and forms of Benchmarking.

## **Suggested Readings**

Altekar RV. 2006. Supply Chain Management: Concepts and Cases. Prentice Hall of India.

Monczka R, Trent R & Handfield R. 2002. Purchasing and Supply Chain Management. Thomson Asia.

van Weele AJ. 2000. Purchasing and Supply Chain Management Analysis, Planning and Practice. Vikas Publ. House.

### ABM 533 MANAGEMENT OF VETERINARY HOSPITALS

## **Objective**

The objective of this course is to acquaint the students about the designing, planning, organizing, and controlling the veterinary hospitals for optimizing the use of space, capital, skill and other resources.

#### **Contents**

UNIT I

Needs, aims and objectives of Veterinary hospitals; the existing and simulated situations under which veterinary hospitals work or are to work.

UNIT II

Designing and planning an ideal hospital; optimizing the use of resources human, space, equipment, drugs, time, capital, etc.; Materials management and problems Normal purchase procedure. Receipt; storage and distribution of materials Cost reduction & scientific inventory control. Information system and materials management performance. Equipment maintenance, condemnation & disposal.

**UNIT III** 

Defining authority, responsibility and accountability of management for optimizing the use of skill, developing and upgrading skills and technology; efficient system of record keeping and accounting; Concept of quality & Total quality management (T.Q.M) Introduction to Veterinary audit, Statistical quality control (S.Q.C.), Quality control Circle (Q.C.C.).

**UNIT IV** 

Hospital information system as an aid to efficient controlling and monitoring; need for financial resources - investment and working capital; Records: Types & Methodology, Reports and Reporting system. Contemporary and need-based methods of accounting; General consideration. Need based information system. Applicability in surveillance & monitoring; planning & policy making; cost control.

**UNIT V** 

Economic functions and quality control system; Animal health Economics: An introduction Need for financial resources (type and need). Investment planning

and working capital; Budgeting and cost cutting (cost control).legal aspects in the functioning of the hospital.

## ABM 534 POULTRY AND HATCHERY MANAGEMENT

## **Objective**

The course provides an insight into the importance of management in poultry industry, managing a poultry and hatchery enterprise, planning production of poultry products, financial, personnel and marketing management.

#### **Contents**

UNIT I

Poultry and hatchery industry; role of management in poultry industry.

**UNIT II** 

Planning and establishing a poultry and hatchery unit- location, size and construction; farm and hatchery equipments and physical facilities; organizing and managing a poultry farm and hatchery.

**UNIT III** 

Incubation and hatching; production of quality chicks and eggs; factors affecting hatchability; bio-security and hatchery sanitation; handling of hatching eggs; maintaining chick quality-chick grading, sexing, packing, dispatch, transportation and chick delivery.

**UNIT IV** 

Franchise hatcheries; custom hatching; brooding; growing and laying management; crisis management; industrial breeding, feeding, housing and disease management; waste management; Record management; cost accounting and budgetary control.

**UNIT V** 

Risks and insurance; personal management- labour relations including wages and salaries, job evaluation and employee appraisal; marketing management-direct sale and sale through franchisees/ agents, advertisement, sale and after sale services, other innovative sales strategies.

**UNIT VI** 

WTO and poultry industry.

## ABM 535 MANAGEMENT OF FLORICULTURE AND LANDSCAPING

#### **Objective**

To objective of this course is to expose the students with floriculture technology and its Agri business implications including international trade.

#### **Contents**

**UNIT I** 

Introduction, importance and scope of floriculture industry; Recent advances in floriculture industry.

**UNIT II** 

Evolution of new cultivars; and production technology of ornamental plants; special techniques for forcing of flowers for export. Bonsai art and miniature plant culture.

UNIT III

Drying and dehydration of flowers; response of flowers to environmental conditions; importance and scope of landscape gardening. Lawn establishment, maintenance and management.

**UNIT IV** 

Style of gardening, Anesthetic and Socio-aesthetic planning of old and newly developed towns and cities; commercial cultivation of flower crops (rose, jasmine gladiolus, tuberose, marigold, aster, carnation, gerbera, lilium

chrysanthemum); use of plant regulators in flower production.

**UNIT V** 

Extraction, purification and storage of essential oils and perfumes; Scope, marketing and constraints of cut flower industry; post harvest changes in cut flowers, storage and packing of cut flowers; determining optimum time of harvesting of flowers for export and home use.

## **Suggested Readings**

Chadha KL & Choudhary B. Ornamental Horticulture in India. ICAR.

Grindal EW. Every Day Gardening in India. D.B. Tarporevala Sons.

Randhawa GS & Mukhopadhyay A. Floriculture in India. Allied Publ.

Randhawa MS. Beautifying India. Raj Kamal Publ.

## ABM 536 QUALITY MANAGEMENT\* (1+1)

Unit I

Defining, planning, controlling, assuring and delivering quality. Introduction of quality in business, responsibility for employees, quality for the customers, Deming's 14 point for quality management.

UNIT II

Quality grades and standards, quality circles. Concept of TQM, basic approach of TQM, strategic framework for implementing TQM.

**UNIT III** 

Statistical methods for quality control, seven QC tools: flow chart, check sheet, histogram, Pareto diagram, cause & effect diagram, scatter diagram, control chart (zone control chart & process capability index), concept of six sigma.

**UNIT IV** 

Barriers & challenges in quality management. Quality improvement programme, factors affecting quality and productivity. Global quality in 21<sup>st</sup> century.

## **Suggested Reading:**

Quality management-Demystified

Total Quality Management - Mohanty & Lakhe, Jaico Publishing House

Quality Control- Dale H. Besterfield, Pearson education

Quality Managemnt- Kanishka Bedi; Oxford University Press India, 2006

## ABM 537 COMMODITY FUTURE MARKETS AND DERIVATIVES\* (2+0)

#### **Course Objective**

Commodity futures markets are an important instrument of risk management in agricultural markets. This course aims at making the participants familiar with the logic, practice and instruments of the commodity futures and derivatives. These markets are increasingly becoming functional now under the liberalised market and policy environment. The course will examine the nature of these markets, major instruments and tools of their performance assessment and global trends

## **Contents**

UNIT I

Commodities, Derivatives, Futures and Options

UNIT II

Why futures, Pricing of Commodities, Evaluation of International Commodity Exchanges,

Commodity Futures in India and its Regulations, Dynamics of a commodity exchange

UNIT III

Market Participants & Trading Strategies, Fundamental Analysis, Technical Analysis, Analyzing Commodity Price Chart Patterns, Confirming Tools UNIT IV

Useful Trading Techniques, Clearing & Settlement, Delivery Mechanism, Taxation Issues,

## **Course Contents**

#### AG ECON 501 MICRO ECONOMIC THEORY AND APPLICATIONS 2+0

## **Objective**

This course is intended to provide an overview of microeconomic theory and its applications. The course starts with the theory of consumer behaviour consisting of consumer's utility maximization problem and demand theory. It intends to provide fundamental concepts and models in the theory of production and costs and sets out to provide a basic understanding of price and / or output determination under different types of market structures including factor markets. This course will also expose the students to the theory of general equilibrium and welfare economics.

## **Theory**

#### UNIT I

Theory of Consumer Behaviour - Cardinal Utility Approach - Ordinal Utility Approach - Income effect and substitution effect - Applications of Indifference curve approach - Revealed Preference Hypothesis - Consumer surplus - Derivation of Demand curve - Elasticity of demand.

## UNIT II

Theory of Production - Production functions - Returns to scale and economies of scale - - Theory of Costs - Cost curves: Profit maximization and cost minimization - Derivation of supply curve Law of Supply - Producers' surplus. UNIT III

Market Equilibrium - Behaviour of Firms in Competitive Markets - Perfect Competition- Effect of Taxation and Subsidies on market equilibrium - Monopoly- Monopolistic - Oligopoly- Theory of Factor Markets.

#### UNIT IV

General Equilibrium Theory - Welfare Economics - Pareto Optimality Social welfare criteria - Social Welfare functions.

#### **Suggested Readings**

David M Kreps 1990. A Course in Microeconomic Theory. Princeton University Press.

Dewitt KK. 2002. Modern Economic Theory. Sultan Chand & Co.

Henderson JM & Quandt RE. 2000. *Microeconomic Theory: A Mathematical Approach*. McGraw-Hill.

Koutsoyiannis A. 2003. Modern Microeconomics. The Macmillan Press.

Silberberg E & Suen W. 2001. *The Structure of Economics - A Mathematical Analysis.* McGraw-Hill.

Varian Hal R. 1999. Intermediate Microeconomics. Affiliated East-West Press.

## AG ECON 502 MACRO ECONOMICS AND POLICY 2+0

## **Objective**

Macro economics and Policy course is intended to expose the students to macroeconomic concepts and theory, the application of the macro economic theory, and implication of the macroeconomic policies.

## **Theory**

#### UNIT I

Nature and Scope of Macro Economics -Classical theory of Employment and Say's Law- Methodology and Keynesian Concepts -National Income - Concepts and measurement- Modern theory of Employment and Effective Demand. - Unemployment and Full employment.

## UNIT II

Consumption function- Investment and savings - Concept of Multiplier and Accelerator - Output and Employment - Rate of interest - Classical, Neo classical and Keynesian version- Classical theory Vs Keynesian theory

#### UNIT III

Money and classical theories of Money and Price - Keynesian theory of money and Friedman Restatement theory of money - Supply of Money -Demand for Money -Inflation: Nature, Effects and control.

#### UNIT IV

IS & LM frame work - General Equilibrium of product and money markets - Monetary policy - Fiscal policy - Effectiveness of Monetary and Fiscal policy - Central banking.

#### UNIT V

Business cycles - Balance of Payment - Foreign Exchange Rate determination.

## **Suggested Readings**

Ahuja HL. 2007. Macroeconomics: Theory and Policy. S. Chand & Co.

Eugene A Diulio 2006. Macroeconomics. 4th Ed. Schaums' Outlines.

Gardner Ackely 1987. *Macro Economic: Theory and Policy*. Collier Macmillan.

Dornbusch. 2006. Macroeconomics. McGraw Hill Publication

## AG ECON 503 EVOLUTION OF ECONOMIC THOUGHT 1+0 Objective

To introduce the students to the evolution of economic thought over a period of time, the background of emanation of thoughts and approaches, as acts of balancing and counter balancing events and criticisms. The course will also in a comprehensive way help the students to know and appreciate the contributions of the Galaxy of Economists.

## **Theory**

#### UNIT 1

Approaches for the study of history of economic thought - Absolutist vs. Relativist approaches - Evolution of Economic Thought vs. Economic History. Ancient economic thought - medieval economic thought - mercantilism - physiocracy - Forerunners of Classical Political Economy.

## UNIT II

Development of Classical Thoughts (Adam Smith, Robert Malthus and David Ricardo) - Critics of Classical Thoughts- Socialist critics - Socialist and Marxian Economic Ideas - Austrian School of Thought - Origins of Formal Microeconomic Analysis - William Stanley Jevons, Cournot and Dupuit.

#### UNIT III

The birth of neoclassical economic thought - Marshall and Walras General Equilibrium Theory - Welfare Theory - Keynesian economics.

#### UNIT IV

The Era of globalization - Experiences of developing world - Rigidity of the past vs. emerging realism - The changing path of international Institutions to economic growth and development approaches.

## UNIT V

Economic Thought in India - Naoroji and Gokhale - Gandhian Economics - Economic thought of independent India - Nehru's economic philosophy - Experiences of the Structural adjustment programmes of the post liberalization era.

## **Suggested Readings**

Blaug M. 1964. Economic Theory in Retrospect. Heineman.

Blaug M. 1986. Economic History and the History of Economic Thought.

Wheatsheaf Books, Brighton.

Ekelund RB & Hebert RF. 1975. *A History of Economic Theory and Methods*. McGraw-Hill.

John Mills A. 2002. Critical History of Economics: Missed Opportunities. Pal grave Macmillan.

Screpanti E & Zamagni S. 1995. An Outline of the History of Economic Thought. Clarendon Press, Oxford.

# AG ECON 504 AGRICULTURAL PRODUCTION ECONOMICS 2+1 Objective 2+1

To expose the students to the concept, significance and uses of agricultural production economics.

## Theory

### UNIT I

Nature, scope and significance of agricultural production economics - Agricultural Production processes, assumptions of production functions, commonly used forms - Properties, limitations, specification, estimation and interpretation of commonly used production functions.

## UNIT II

Factors of production, classification, interdependence, and factor substitution - Determination of optimal levels of production and factor application -Optimal factor combination and least cost combination of production.

## UNIT III

Cost functions and cost curves, components, and cost minimization -uality theory - cost and production functions and its applications. -Derivation of firm's input demand and output supply functions -Economies and diseconomies of scale.

## UNIT IV

Technology in agricultural production, nature and effects and measurement - Measuring efficiency in agricultural production; technical, allocative and economic efficiencies - Yield gap analysis-concepts-types and measurement - Nature and sources of risk and uncertainty

#### **Practical**

Different forms of production functions - specification, estimation and interpretation of production functions - returns to scale, factor shares, elasticity of production - physical optima-economic optima-least cost combination-optimal product choice- cost function estimation, interpretation-estimation of yield gap - incorporation of technology in production functions- measuring returns to scale-risk analysis.

## **Suggested Readings**

Beattie BR & Taylor CR. 1985. *The Economics of Production*. John Wiley & Sons.

Doll JP & Frank O. 1978. *Production Economics - Theory and Applications*. John Wiley & Sons.

Gardner BL & Rausser GC. 2001. Handbook of Agricultural Economics.

Vol. 1. Agricultural Production. Elsevier.

Heady EO. *Economics of Agricultural Production and Resource Use*. Prentice-Hall.

Sankayan PL. 1983. Introduction to Farm Management. Tata Mc Graw Hill.

Heady EO. & Dhilon JL. Agricultural Production Function. Kalyani Publishers

## AG ECON 505 AGRICULTURAL MARKEIING AND PRICE ANALYSIS 2+1 Objective

To impart adequate knowledge and analytical skills in the field of agricultural marketing issues, and enhance expertise in improving the performance of the marketing institutions and the players in marketing of agricultural commodities.

## **Theory**

#### UNIT I

Review of Concepts in Agricultural Marketing - Characteristic of Agricultural product and Production - Problems in Agricultural Marketing from Demand and Supply and Institutions sides. Market intermediaries and their role - Need for regulation in the present context - Marketable & Marketed surplus estimation. Marketing Efficiency - Structure Conduct and Performance analysis - Vertical and Horizontal integration - Integration over space, time and form-Vertical co-ordination.

#### UNIT II

Marketing Co-operatives - APMC Regulated Markets - Direct marketing, Contract farming and Retailing - Supply Chain Management - State trading, Warehousing and other Government agencies -Performance and Strategies - Market infrastructure needs, performance and Government role - Value Chain Finance.

#### UNIT III

Role of Information Technology and telecommunication in marketing of agricultural commodities - Market research-Market information service - electronic auctions (e-bay), e-Chaupals, Agmarket and Domestic and Export market Intelligence Cell (DEMIC) - Market extension.

#### UNIT IV

Spatial and temporal price relationship - price forecasting - time series analysis - time series models - spectral analysis. Price policy and economic development - non-price instruments.

#### UNIT V

Theory of storage - Introduction to Commodities markets and future trading - Basics of commodity futures - Operation Mechanism of Commodity markets - Price discovery - Hedging and Basis - Fundamental analysis Technical Analysis - Role of Government in promoting commodity trading and regulatory measures.

#### **Practical**

Supply and demand elasticities in relation to problems in agricultural marketing. Price spread and marketing efficiency analysis. Marketing structure analysis through concentration ratios. Performance analysis of Regulated market and marketing societies. Analysis on contract farming and supply chain management of different agricultural commodities, milk and poultry products. Chain Analysis - quantitative estimation of supply chain efficiency - Market Intelligence - Characters, Accessibility, and Availability Price forecasting. Online searches for market information sources and interpretation of market intelligence reports - commodity outlook - Technical Analysis for important agricultural commodities. Fundamental Analysis for important agricultural commodities Presentation of the survey results and wrap-up discussion.

#### **Suggested Readings**

Purecell WD & Koontz SR. 1999. *Agricultural Futures and Options: Principles and Strategies*. 2nd Ed. Prentice-Hall.

Shepherd SG & Gene AF. 1982. *Marketing Farm Products*. Iowa State Univ. Press.

Singhal AK. 1986. Agricultural Marketing in India. Annual Publ., New Delhi.

## AG ECON 506 RESEARCH METHODOLOGY FOR SOCIAL SCIENCES 1 + 1 Objective

To expose the students to research methodology used in social sciences. The focus will be on providing know ledge related to research process, data collection and data analysis etc.

## Theory

#### UNIT I

Importance and scope of research in agricultural economics. Types of research - Fundamental vs. Applied. Concept of researchable problem, research prioritization - selection of research problem. Approach to research - research process.

#### UNIT II

Hypothesis - meaning - characteristics - types of hypothesis - review of literature - setting of Course Objective and hypotheses - testing of hypothesis.

### UNIT III

Sampling theory and sampling design - sampling error - methods of sampling - probability and non-probability sampling methods- criteria to choose. Project proposals - contents and scope - different types of projects to meet different needs - trade-off between scope and cost of the study. Research design and techniques - Types of research design.

## UNIT IV

Data collection - assessment of data needs - sources of data collection discussion of different situations. Mailed questionnaire and interview schedule - structured, unstructured, open ended and closed-ended questions. Scaling Techniques. Preparation of schedule - problems in measurement of variables in agriculture. Interviewing techniques and field problems - methods of conducting survey - Reconnaissance survey and Pre testing.

#### UNIT V

Coding editing - tabulation - validation of data. Tools of analysis - data processing. Interpretation of results - Preparing research report / thesis Universal procedures for preparation of bibliography - writing of research articles.

#### **Practical**

Exercises in problem identification. Project proposals - contents and scope. Formulation of Objective and hypotheses. Assessment of data needs sources of data - methods of collection of data. Methods of sampling criteria to choose - discussion on sampling under different situations. Scaling Techniques - measurement of scales. Preparation of interview schedule - Field testing. Method of conducting survey. Exercise on coding, editing, tabulation and validation of data. Preparing for data entry into computer. Hypothesis testing - Parametric and Non-Parametric Tests. Exercises on format for Thesis / Report writing. Presentation of the results.

## AG ECON 507 ECONOMETRICS 2+1

## **Objective**

The objective of the course is to impart knowledge on econometric tools to the students of agricultural economics. Training in econometrics will help the student to analyze the economic problem by applying quantitative techniques.

## **Theory**

#### UNIT I

Introduction - relationship between economic theory, mathematical economics, models and econometrics, methodology of econometrics, regression analysis, assumptions of random disturbance term

#### UNIT II

Properties of BLUE -Basic two variable regression - estimation and interpretation approaches to estimation - OLS, and their properties - extensions to multi variable models-multiple regression estimation and interpretation.

## UNIT III

Violation of assumptions - identification, consequences and remedies for multicollinearity, heteroscedasticity, autocorrelation - data problems and remedial approaches - model misspecification.

### UNIT IV

Use of dummy variables- specification, estimation and interpretation.

#### UNIT V

Simultaneous equation models - structural equations - reduced form equations - identification and approaches to estimation.

## **Practical**

Single equation two variable model, specification and estimation, hypothesis testing- transformations of functional forms and OLS application-estimation of multiple regression model - testing and managing Multicollinearity - testing and managing heteroscedasticity - testing and managing autocorrelation – Estimation of regressions with dummy variables - identification of equations in simultaneous equation systems.

#### AG ECON 508 LINEAR PROGRAMMING 1+1

## **Objective**

The objective of the course is to impart knowledge of Linear programming techniques.

## **Theory**

## UNIT I

Decision Making-Concepts of decision making, introduction to quantitative tools, introduction to linear programming, uses of LP in different fields, graphic solution to problems, formulation of problems.

## UNIT II

Simplex Method: Concept of simplex Method, solving profit maximization and cost minimizations problems. Formulation of farms and non farm problems as linear programming models and solutions. Sensitivity analysis.

#### UNIT III

Extension of Linear Programming models: Integer programming -Variable resource and price programming, transportation problems, recursive programming, dynamic programming.

#### UNIT IV

Game Theory- Concepts of game theory, two person constant sum, zero sum game, saddle point, solution to mixed strategies, the rectangular game as Linear Programme.

#### **Practical**

Graphical and algebraic formulation of linear programming models. Solving of maximization and minimization problems by simplex method. Formulation of the simplex matrices for typical farm situations.

## **Suggested Readings**

Dorfman R. 1996. *Linear Programming & Economic Analysis*. McGraw Hill. Loomba NP.2006. *Linear Programming*. Tata McGraw Hill.

## AG ECON 509 AGRICULTUIRAL FINANCE AND PROJECT MANAGEMENT 2+1 Objective

The Course objective is to impart knowledge on issues related to lending to priority sector credit management and financial risk management. The course would bring in the various appraisal techniques in project - investment of agricultural projects.

## **Theory**

## UNIT I

Role and Importance of Agricultural Finance. Financial Institutions and credit flow to rural/priority sector. Agricultural lending - Direct and Indirect Financing - Financing through Co-operatives, NABARD and Commercial Banks and RRBs. District Credit Plan and lending to agriculture/priority sector. Micro-Financing and Role of MFI's - NGO's, and SHG's.

## UNIT II

Lending to farmers - The concept of 3 C's, 7 P's and 3 R's of credit. Estimation of Technical feasibility, Economic viability and repaying capacity of borrowers and appraisal of credit proposals. Understanding lenders and developing better working relationship and supervisory credit system. Credit inclusions - credit widening and credit deepening.

#### UNIT III

Financial Decisions - Investment, Financing, Liquidity and Solvency. Preparation of financial statements - Balance Sheet, Cash Flow Statement and Profit and Loss Account. Ratio Analysis and Assessing the performance of farm/firm.

#### UNIT IV

Project Approach in financing agriculture. Financial, economic and environmental appraisal of investment projects. Identification, preparation, appraisal, financing and implementation of projects. Project Appraisal techniques - Undiscounted measures. Time value of money - Use of discounted measures - B-C ratio, NPV and IRR. Agreements, supervision, monitoring and evaluation phases in appraising agricultural investment projects. Net work Techniques - PERT and CPM.

#### UNIT V

Risks in financing agriculture. Risk management strategies and coping mechanism. Crop Insurance programmes - review of different crop insurance schemes - yield loss and weather based insurance and their applications.

#### **Practical**

Development of Rural Institutional Lending - Branch expansion, demand and supply of institutional agricultural credit. Over dues and Loan waiving-: An overview, Rural Lending Programmes of Commercial Banks, Lead Bank Scheme- Preparation of District Credit Plan, Rural Lending Programmes of Co-operative Lending Institutions, Preparation of financial statements using farm/firm level data, Farm credit appraisal techniques and farm financial analysis through financial statements, Performance of Micro Financing Institutions - NGO's and Self-Help Groups, Identification and formulation of investment projects, Project appraisal techniques Undiscounted Measures and their limitations. Project appraisal techniques - Discounted Measures, Network techniques - PERT and CPM for project management, Case Study Analysis of an Agricultural project, Financial Risk and risk management strategies - crop insurance schemes, Financial instruments and methods - E banking, Kisan Cards and core banking.

Muniraj R. 1987. Fann Finance for Development. Oxford & IBH Publ.

# AG ECON 510 INTERNATIONAL ECONOMICS 1+1 Objective

The expected outcome of this course will be creating awareness among the students about the role of International Economics on National welfare.

## **Theory**

## UNIT I

Scope and Significance of International Economics - The role of trade. General Equilibrium in a Closed Economy (Autarky Equilibrium) Equilibrium in a Simple Open Economy - Possibility of World Trade gains and Trade Equilibrium.

#### UNIT II

Tariff, Producer Subsidy, Export Subsidy, Import Quota and Export Voluntary Restraints- The Case of Small Country and Large Country Case.

#### UNIT III

Ricardian Model of Trade- Specific Factors Model- Heckscher - Ohlin Model -

Trade Creation and Trade Diversion - Offer Curve - Export Supply Elasticity and Import Demand Elasticity - Comparative Advantage and Absolute Advantage.

#### UNIT IV

Official Exchange Rate and Shadow Exchange Rate - Walra's Law and Terms of Trade - Trade Blocks.

#### UNIT V

IMF, World Bank, IDA, IFC, ADB - International Trade agreements Uruguay Round - GATT - WTO.

#### **Practical**

Producer's Surplus, Consumer's Surplus, National Welfare under Autarky and Free Trade Equilibrium with small and large country assumption Estimation of Trade Gains- Estimation of competitive and comparative measures like NPC, EPC, ERP and DRC- Estimation of Offer Curve. Elasticity- Estimation of Effect of Tariff, Export Subsidy, Producer Subsidy, Import Quota and Export Voluntary Restraints on National Welfare- Estimation of Ricardian Model - Estimation of Effect of Trade under Specific Factor Model- Estimation of trade Equilibrium under Heckscher -Ohlin model- Trade Creation and Diversion.

## **Suggested Readings**

## AG ECON 511 AGRICULTURAL DEVELOPMENT AND POLICIES Objectives 2+0

To provide orientation to the students regarding the concepts and measures of economic development. To provide orientation on theories of economic growth and relevance of theories in developing countries. To make them to understand the agricultural policies and its effect on sustainable agricultural development. To make them to understand the globalization and its impact on agricultural development.

#### **Theory**

#### UNIT I

Development Economics - Scope and Importance - Economic development and economic growth - divergence in concept and approach - Indicators and Measurement of Economic Development - GNP as a measure of economic growth - New Measures of Welfare - NEW and MEW - PQLI - HDIGreen GNP - Criteria for under development - Obstacles to economic development - Economic and Non-Economic factors of economic growth.

## UNIT II

Economic development - meaning, stages of economic development, determinants of economic growth. Theories of economic growth Ricardian growth model- The Harrod - Domar Model- The Neo classical Model of Growth - The Kaldor Model - Optimal Economic Growth Recent Experiences of developing country economies in transition - Role of state in economic development - Government measures to promote economic development. Introduction to development planning.

#### UNIT III

Role of agriculture in economic / rural development - theories of agricultural development - Population and food supply - need for sound agricultural policies - resource policies - credit policies - input and product marketing

policies - price policies.

## UNIT IV

Development issues, poverty, inequality, unemployment and environmental degradation - Models of Agricultural Development - Induced Innovation Model - policy options for sustainable agricultural development.

#### UNIT V

Globalization and the relevance of development policy analysis - The dilemma of free trade? - Free trade versus Protectionism- Arguments for protection. Arguments against protection. Role of protection in Developing Countries. WTO - Agreement on Agriculture - Contradictions of free trade - proponents and opponents policies in vulnerable sectors like agriculture Lessons for developing countries.

1+0

Naqvi SNH. 2002. *Development Economics - Nature and Significance*. Sage Publ.

## AG ECON 512 INSTITUTIONAL ECONOMICS Objective

The course exposes the students to the institutional problems and remedies.

## Theory

## UNIT I

Old and New Institutional Economics - Institutional Economics Vs Neoclassical Economics. Definition of institutions - Distinction between institutions and organizations - Institutional evolution

## UNIT II

Institutional change and economic performance - national and international economic institutions. Transaction cost economics Transaction costs and the allocation of resources. Transaction costs and efficiency.

#### UNIT III

Free rider problem - path dependency - Interlinked transactions. Collective action and the elimination of free-rider problem - The logic of collective action and its role in reducing free rider problem - theory of Groups. Rent seeking - interest groups and policy formulation.

#### UNIT IV

Economic analysis of property rights- property rights regimes - private property - State Property - Common property Resources (CPRs) - public goods and club goods.

## UNIT V

Special features of institutional arrangements in agriculture - Transaction costs in agriculture - Theories of agrarian institutions tenancy institutions.

### **Suggested Readings**

#### AG ECON 513 NATURAL RESOURCE AND ENVIRONMENTAL ECONOMICS

1+1

## **Objectives**

To introduce economics principles related to natural resource and environmental economics. To explore the concept of efficiency and the efficient allocation of natural resources. To understand the economics of why environmental problems occur. To explore the concept of efficiency and the efficient allocation of pollution control and pollution prevention decisions. To understand the environmental policy issues and alternative instruments of environmental policies.

## Theory

## UNIT I

Concepts, Classification and Problems of Natural Resource Economics - Economy - Environment interaction - The Material Balance principle, Entropy law- Resources Scarcity - Limits to Growth - Measuring and mitigating natural resource scarcity - Malthusian and Recardian scarcity scarcity indices - Resource Scarcity and Technical Change.

#### UNIT II

Theory of optimal extraction renewable resources -economic models of oil extraction - efficiency - time path of prices and extraction - Hotelling's rule, Solow-Harwick's Rule. Theory of optimal extraction exhaustible resources - economic models of forestry and fishery.

#### UNIT III

Efficiency and markets - market failures - externalities - types - property rights - transaction costs - Coase's theorem and its critique - public goods common property and open access resource management - Collective action.

## UNIT IV

Environmental perspectives - biocentrism, sustainability, anthropocentrism - Environmental problems and quality of environment - Sources and types of pollution -air, water, solid waste, land degradation - environmental and economic impacts - Economics of pollution control - efficient reduction in environmental pollution.

#### UNIT V

Environmental regulation - economic instruments - pollution charges Pigovian tax - tradable permits - indirect instruments - environmental legislations in India.

## UNIT VI

Concept of sustainable development - Economic Perspective - Indicators of sustainability Relation between development and environment stress Environmental Kuznet's curve Environmental Accounting - resource accounting methods - International Environmental Issues - climate change - likely impacts -mitigation efforts and international treaties.

#### **Practical**

Exhaustible resource management -optimum rate of oil extraction. Renewable resource management - optimum harvest of Forestry/fishery. Exercise on pollution abatement -I. Exercise on pollution abatement -II. Concepts in valuing the environment. Taxonomy of valuation techniques. Productivity change method - substitute cost method - Hedonic price method - Travel cost method -Contingent valuation methods. Discount rate in natural resource management. Environment impact assessment Visit to Pollution Control Board.

## AG ECON 514 INTELLECTUAL PROPERTY MANAGEMENT 1+0 Objective

The Course Objective of the course is to create awareness about intellectual property rights in agriculture. The course deals with management of patents, trademark, geographical indications, copy rights, designs, plant variety protection and bio-diversity protection. The students will be taught on the Marketing and Commercialization of Intellectual Properties.

## **Theory**

#### UNIT I

World Trade Organization- Agreement on Agriculture (AoA) and Intellectual Property Rights (IPR) - Importance of Intellectual Property Management - IPR and Economic growth- IPR and Bio diversity - Major areas of concern in Intellectual Property Management - Technology Transfer and Commercialization-Forms of different Intellectual Properties.

#### UNIT II

Discovery *versus* Invention - Patentability of Biological Inventions Method of Agriculture and Horticulture- procedure for patent protection:

Preparatory work. Record keeping, writing a patent document, filing the patent

document -Types of patent application-patent application under the Patent cooperation treaty (PCT).

## UNIT III

Plant genetic resources -Importance and conservation - Sui Generic System -Plant Varieties Protection and Farmers' Rights Act- Registration of Extant varieties - Registration and protection of New Varieties / Hybrids / Essentially Derived Varieties - Dispute prevention and settlement -Farmers' Rights.

## UNIT IV

Trademark- Geographical Indications of Goods and Commodities - Copy rights-Designs - Biodiversity Protection.

## <u>UNIT</u> V

Procedures for commercialization of technology - Valuation, Costs and Pricing of Technology- Licensing and implementation of Intellectual Properties-Procedures for commercialization - Exclusive and non exclusive marketing rights-Research Exemption and benefit sharing.

## **Suggested Readings**

Ganguli P. 2001. Intellectual Property Rights -Unleashing the Knowledge Economy. Tata McGraw Hill.

Khan SA & Mashelkar R. 2004. *Intellectual Property and Competitive Strategies in the*  $2y^t$  *Century.* Kluwer Law International, The Hague.

## AG ECON 515 RURAL MARKETING

2+0

## **Objective**

To provide understanding regarding issues in rural markets like marketing environment, consumer behaviour, distribution channels, marketing strategies, etc.

## **Theory**

## UNIT I

Concept and scope of rural marketing, nature and characteristics of rural markets, potential of rural markets in India.

#### UNIT II

Environmental factors - socio-cultural, economic and other environmental factors affecting rural marketing.

#### UNIT III

Rural consumer's behaviour - behavior of rural consumers and farmers; buyer characteristics and buying behaviour; Rural vis urban markets.

### UNIT IV

Rural marketing strategy - Marketing of consumer durable and non-durable goods and services in the rural markets with special reference to product planning; product mix, pricing Course Objective, pricing policy and pricing strategy.

## UNIT V

Product promotion - Media planning, planning of distribution channels, and organizing personal selling in rural market in India.

## **Suggested Readings**

Krishnamacharyulu CSG & Ramakrishan L. 2002. *Rural Marketing*. Pearson Edu.

Ramaswamy VS & Nanakumari S. 2006. *Marketing Management*. 3<sup>rd</sup> Ed. MacMillan.

Singh AK & Pandey S. 2005. *Rural Marketing*. New Age. Singh Sukhpal. 2004. *Rural Marketing*. Vikas Publ. House.

The objective of this course is to introduce the theoretical models and applications of microeconomic theory. In particular, the basic comparative statistical techniques and the more modern duality theory will be developed and applied to the models of maximization, unconstrained and constrained utility maximization, expenditure minimization, constrained profit maximization, and cost and expenditure minimization. These mathematical structures form the basic building blocks of neoclassical economics; this course will stress the development and application of these important models. We follow a calculus rather than a graphical approach to the theory. In the subsequent sections of the course, we provide a fairly rigorous exposure to price determination under different market situations, general equilibrium theory, causes and consequences of market failure and welfare economics including the theory of public choice.

## **Theory**

## UNIT I

Theory of consumer behaviour - Duality in consumer theory - expenditure function and indirect utility function - Measurement of Income Effect and Substitution Effect. Measurement of Changes in Consumers 'Welfare - Consumer's Surplus, Compensating Variation and Equivalent Variation - Dynamic versions of demand functions - Integrability of demand functions. Demand Models - Linear Expenditure System, Almost Ideal Demand System. Applications of consumer theory - Household model and time allocation - Labour supply decisions by households.

## UNIT II

Perfect competition - Monopoly, monopolistic competition and oligopoly. Oligopoly models - collusive and non-collusive models of oligopoly Cournot model, Chamberlin model, Stackleberg solution.

## **UNIT III**

General equilibrium theory - Conceptual overview - General equilibrium conditions with Production and Consumption. Existence, Uniqueness and Stability of general competitive equilibrium. Walrasian general equilibrium - Mathematical derivation of conditions for general equilibrium.

## UNIT IV

Market failure - Incomplete markets - Asymmetric information - Principal-Agent problem, adverse selection and moral hazard. Externalities Network externalities - Public goods - Optimal provision of public goods.

## UNIT V

Welfare Economics - Concepts, problems, approaches and limitations of Welfare Economics, Pareto conditions of maximum welfare - Criteria for social welfare - Social Welfare functions, Social versus Private costs and benefits.

#### **Practical**

Problems in consumer utility maximization - Estimation of income and substitution effects; Estimation and comparison of Consumer's surplus, equivalent variation and compensating variation. Estimation of demand models - Derivation and estimation of labour supply equations from household models comparative static analysis in consumption. Advanced problem solving in price determination under perfect competition, monopoly, oligopoly and monopolistic competition. Game theory models. Problems solving in General

Equilibrium Theory and Welfare Economics. Problems in public goods provision.

## AG ECON 602 ADVANCED MACRO ECONOMICS ANALYSIS 2+0 Objective 2+0

Advanced macroeconomics course will be offered to PhD students of Agricultural Economics with the following Course Objective.

- To understand the macroeconomic theory
- To examine the macroeconomic Policy issues
  - To analyze the macroeconomic Policy implications

#### **Theory**

## UNIT I

Review of Macro Economics concepts-Comparative statistics- Keynesian theory- Consumption Function and Theories of Consumption -Saving Function and Theories of Saving.

#### UNIT II

Theories of Investment-Savings and Investment Equality - IS - LM Framework and its demand for and Supply of Money-Monetary Policy in the static model - Inflation.

## UNIT III

Stagflation and Supply side Economics - Theory of Unemployment Phillips Curve controversy - Inflation, Productivity and distribution - Fiscal policy: Effectiveness and Problems.

#### UNIT IV

Social Accounting Matrix Framework - General Equilibrium Analysis Neo classical Macro Economics - Stochastic Macro Economics.

#### UNIT V

BOP & Adjustment Policies - Foreign Exchange Policy - Foreign sector:

Capital and Current Account - Impact of WTO on Indian Economy Impact of IMF & IBRD on Indian Economy - Review of Macro Economic Policies in India.

## **Suggested Readings**

Diulio EA. 2006. Macroeconomics. 4th Ed. Schaums' Outlines.

# AG ECON 603 ADVANCED ECONOMETRICS 2+ 1 Objective

The Course Objective of the course is to impart knowledge on advanced econometric tools to the Research Scholars of agricultural economics. Training

in advanced econometrics will help the Research Scholars to analyze the economic problem by applying quantitative techniques.

## Theory

#### UNIT I

Review of classical regression model - review of hypothesis testing restrictions on parameters - single equation techniques.

#### UNIT II

Ordinary least squares - weighted least squares - generalized least squares - method of principal components - instrumental variables method maximum likelihood method - errors in variables, non-linearity and specification tests.

## UNIT III

Dummy variables - Qualitative and truncated dependent variables - limited dependent variables - probit and logit models.

#### **UNIT IV**

Autoregressive distributed lag models - panel data, fixed and random effects models.

#### UNIT V

Simultaneous equation methods -identification - estimation by indirect least squares 2SLS, SURE, 3SLS.

### **Practical**

Estimation of multiple regression model - GLS estimation methods - testing misspecification errors - Testing and Managing multicollinearity, heteroscedasticity and autocorrelation - estimation of LPM, Logit and Probit models - comparing two regressions - Chow test - estimation of distributed lag models - panel data random and fixed effects models Indirect least squares 2SLS, SURE, 3SLS, estimation of simultaneous equation models

## **Suggested Readings**

Maddala GS. 2002. Econometrics. McGraw Hill.

## AG ECON 604 ADVANCED PRODUCTION ECONOMICS

2 + 1

#### **Objective**

To expose the students to the concept, significance and uses of advance production economics.

#### **Theory**

## UNIT I

Agricultural Production process - Relationship between farm planning and production economics-scope of agricultural production and planning methods/procedures in agro-economic research and planning.

## UNIT II

Production functions, components, assumptions, properties and their economic interpretation - Concepts of homogeneity, APP, MPP, elasticities of substitution and their economic relevance - Production relations -Commonly used functional forms, nature, properties, limitations, estimation and interpretation -linear, Spillman -Cobb Douglas, quadratic, functional forms - Translog, and transcendental functional forms -CES production functional forms -Conceptual and empirical issues in specification, estimation and application of production functions- Analytical approaches to economic optimum, -Economic

optimum with production function analysis - input use behaviour.

#### UNIT III

MRT and product relationship-cost of production -single input and multiple product decisions- Decision making with no risk - Cost curves - Principles and importance of duality theory - Correspondence of production, cost, and profit functions - Principles and derivation of demand and supply functions.

#### **UNIT IV**

Technology, input use and factor shares -effect of technology on input use. decomposition analysis-factor shares-estimation methods- Economic efficiency in agricultural production - technical, allocative and economic efficiency - measurement - Yield gaps analysis - concepts and measurement.

#### UNIT V

Simulation and programming techniques in agricultural production Multiple Course Objective Programming - Goal programming - Risk and uncertainty in agriculture - incorporation of risk and uncertainty in decision making - risk and uncertainty and input use level.

#### **Practical**

Estimation of different forms of production functions- Optimal input and product choice from estimated functions-Derivation of demand and supply functions and estimation-Estimation of cost function and interpretations. -Estimation of factor shares from empirical functions estimated-Estimating production functions incorporating technology changes: Decomposition analysis and incorporation of technology-Estimation of efficiency measures -MOTAD-Simulation models for agricultural production decisions-Goal programming.

## **Suggested Readings**

Heady EO. & Dhilon JL. Agricultural Production Function. Kalyani Publishers

# AG ECON 605 QUANTITATIVE DEVELOPMENT POLICY ANALYSIS 1+1 Objective

The course trains the Scholars in the art of informed decision making and helps them to appreciate the value of the analytical basis in policy decisions. They are given hands on training on the estimation and use of various criteria such as elasticities in making QDP A more meaningful. The scholars make extensive reviews to get acquainted with the analytical relevance and in drawing inferences.

#### **Theory**

#### UNIT I

Policy framework - goals, value, beliefs and welfare maximization. Market - Policy and State - State vs. Market - Failure of Policy - Failure of Markets - Rationale for Government Intervention. Role of Quantitative.

Policy Analysis.

## UNIT II

Demand analysis for policymaking - Alternative approaches to demand analysis - Policy implications. Supply response - Alternative approaches to measurement of supply response - Nerlovian models of supply response Policy implications.

#### UNIT III

Household behaviour and policy analysis - Household models.

#### **UNIT IV**

Partial equilibrium analysis - Concept of reference prices - Price distortions - indicators and impact. Transaction costs - Implications for efficiency and productivity - Institutional solutions - Multi market approach to policy analysis.

## UNIT V

Social Accounting -Matrices and multipliers -- Computable General Equilibrium models to assess economy wide impact of policy changes.

#### **Practical**

Review of criteria for policy evaluation - Estimation of price elasticities - Review of estimation of complete demand systems - Estimation of Nerlovian supply Response model - Review of Household models Specification and estimation of household models - Partial equilibrium analysis - Input-output table - Social Accounting Matrix - Construction of a SAM - computation of Multipliers - Multi Market Analysis - Review of Computable General Equilibrium Models.

## AG ECON 606 ADVANCED AGRICULTURAL MARKETING AND PRICE ANALYSIS

## 2+1

## **Objective**

The main Course Objective of this course is to critically analyze the important marketing concepts, models, properties of agricultural commodity prices and forecasting, data collection and analysis using current software etc., in order to make them policy decisions in the field of agricultural marketing.

## **Theory**

## UNIT I

Importance of market analysis in the agricultural system - types of marketing-advantages and disadvantages - quantitative estimation - the distinguishing characteristics and role of agricultural prices - data sources for agricultural products and prices - softwares used in market analysis.

## UNIT II

Role of various formal institutions in agricultural marketing - and functions - measuring their efficiency - public - private partnership - institutional

arrangements. Successful case studies.

#### UNIT III

Multi market estimation, supply response models. Market integration and price transmission - supply / value chain management. GAP analysis. Current trends in information in the changing agrifood system.

## UNIT IV

Agricultural commodity marketing - spot and futures- marketing of derivatives-speculation, hedging, swap, arbitrage etc. commodity exchanges - price discovery and risk management in commodity markets- Regulatory mechanism of futures trading.

## UNIT V

Lag operators and difference equations; stationary and stochastic processes; UNIT roots and cointegration; conditional heteroscedasticity: ARCH and GARCH models - forecast evaluation; methods of forecasting. price indices and econometric estimation and simulation.

#### **Practical**

Estimation of demand/ supply forecasting, supply chain / value chain analysis for different commodities - Commodity modelsmulti market estimation- time series analysis - market integration studies- price discovery price volatility estimation - commodity price forecasting using econometric softwares.

## AG ECON 607 COMMODITY FUTURES TRADING

2+0

## **Objective**

This course is aimed at providing the basic understanding and the mechanics and value of futures markets for speculators and hedgers which in turn will serve as price risk management activities of agribusiness firms.

## **Theory**

## UNIT I

History and Evolution of commodity markets - Terms and concepts: spot, forward and futures Markets - factors influencing spot and future markets. Speculatory mechanism in commodity futures.

#### UNIT II

Transaction and settlement - delivery mechanism - role of different agents trading strategies - potential impact of interest rate, Foreign Exchange, FDI in Commodity Markets.

## UNIT III

Risk in commodity trading, importance and need for risk management measures - managing market price risk: hedging, speculation, arbitrage, swaps - pricing and their features.

## UNIT IV

Important global and Indian commodity exchanges - contracts traded special features -Regulation of Indian commodity exchanges - FMC and its role.

#### UNIT V

Fundamental V s Technical analysis - construction and interpretation of charts and chart patterns for analyzing the market trend - Market indicators - back testing. Introduction to technical analysis software - analyzing trading pattern of different commodity groups.

# AG ECON 608 NATURAL RESOURCE MANAGEMENT Objectives 1+1

This is an applied economics course that focuses on the economic analysis of natural resources, and seeks to identify and solve natural resource management problems via mathematical approach using dynamic optimization techniques. During the course, we will encounter bioeconomic models of natural resources including the classic and more recent forestry and fisheries models, models of land and water use and extraction of non-renewable resources (such as from a mineral deposit). We will focus on intuition and understanding of the economic analysis rather than complicated mathematical models in this class. That said, natural resource problems are inherently dynamic, so some mathematical modeling of biophysical and economic processes will be required. Using computers as an aid to understanding the models will be an important part of the class. The primary tool will be Microsoft Excel, which is the easiest introduction to computational optimization and graphical representation of the results.

## Theory

#### UNIT I

Natural resources - definition - characteristics and classification. Stock dynamics of renewable and non-renewable resources. Equation of motion for renewable and non-renewable resources. Fundamental equation of renewable resources.

## UNIT II

Growth curves of fishery and forest resources. The role of time preference in natural resource use. Simple two-period model of optimal use of renewable and non-renewable resources. Advanced models of optimal resource use - Static V/s. dynamic efficiency in natural resource use Applications of dynamic programming and optimal control.

## UNIT III

Economics of groundwater use - optimal extraction of groundwater. Analytical and numerical solutions for optimal inter-temporal allocation of natural resources. Optimal harvesting of single rotation and multiple rotation forests. Optimal management of fishery.

## UNIT IV

Property rights in natural resources and their implication for conservation and management of natural resources. -Management of common property natural resources - Institutional arrangements for conservation and management of common pool fishery, groundwater and forestry resource.

#### UNIT V

Resource scarcity - Natural resource degradation - Poverty and resource degradation - Natural resource accounting - Pricing and valuation of natural

resources - Natural resources policy.

#### **Practical**

Derivation of the fundamental equation of renewable resources-Estimation of growth curves and stock dynamics for fishery and forestry resources. Simple two period problem of optimal resource use - Numerical solution for simple two-period model of dynamic efficiency in natural resource extraction. Multi-period dynamic efficiency - Using Excel Solver in solving dynamic natural resource harvesting problems. Using analytical solution procedures for solving natural resource management problems Optimal control.

Conrad JM. 1999. *Resource Economics*. Cambridge University Press. Fisher AC. 1981. *Resource and Environmental Economics*. Cambridge Univ. Press.

Prato T. 1998. *Natural Resource and Environmental Economics*. Iowa State Univ. Press.

Sterner T. 2003. Policy Instruments for Environmental and Natural Resource Management. Resources for the Future, Washington DC.

## AG ECON 609 ENVIRONMENTAL ECONOMICS 2+1 Objective

The main objective of this course is to provide an advanced treatment of the economic theory of environmental management and policy, externalities and market and non-market approaches to environmental improvement. Topics in economic growth and environmental problems, poverty and environmental degradation, conservation and sustainable economic growth, intergenerational and global environmental problems, policy issues in environmental regulation and management will be covered at a sufficient depth so as to equip the students with the recent developments in the field.

#### Theory

#### UNIT I

Environmental pollution as a consequence of market failure - Causes and consequences of market failure - Externalities - Public goods and externalities - Economics of pollution - Private vs. Social cost of environmental pollution - Property rights, environment and development Theory of environmental policy.

## UNIT II

Environmental cost benefit analysis - Environmental impact assessment techniques - Non-market valuation of environmental resources (WTP / WTA) - Environment, market and social welfare.

## UNIT III

Economic growth and environmental cost - Growth oriented economic policies and their environmental impacts - Population and environmental quality - poverty and environmental degradation - Sustainable development - Indicators of sustainable development - Issues in sustainable development.

#### UNIT IV

Environment, ecology and environmental accounting - Environmental

pollution with respect to water and air - Land and forest resources related environmental pollution - Coastal externalities - Urbanization and environment - Basic approaches to environmental policy (Tax, subsidy, pollution permits etc.) Green taxes - Political economy of environmental regulation and management.

# UNIT V

Transboundary environmental problems - Economics of global warming, climate change and emission trading - Environment, international trade and development.

#### **Practical**

Contemporary global environmental issues, movement, policies, programmes, laws and other regulatory mechanisms. Criteria for evaluating the environment related projects and review of Environmental Impact Assessment (EIA) techniques - Recreation demand models of environmental valuation - Contingent valuation techniques. Environmental Resource Accounting Techniques - Discussion on the techniques dealing with air pollution and review of case studies on air pollution and its impacts - forest environment and wild life conservation. Green GDP and Green house insurance - Practical considerations and comparison of instruments of environmental policy - Non-point source pollution control methodologies - Environment in macroeconomic modeling - Meta-analysis, economic valuation and environmental economics - Multi-criteria methods for quantitative, qualitative and fuzzy evaluation problems related to environment - Input output analysis, technology and the environment - Computable general equilibrium models for environmental economics and policy analysis.

# EXT 501 DEVELOPMENT PERSPECTIVES OF EXTENSION 1+1 EDUCATION

# **Objective**

The course is intended to orient the students with the concept of extension education and its importance in Agriculture development and also to expose the students with various Rural development programmes aimed at poverty alleviation and to increase employment opportunites and their analysis. Besides, the students will be learning about the new innovations being brought into the Agricultural Extension in India.

# Theory

## UNIT I

Extension Education – Meaning, objectives, concepts, principles and philosophy, critical analysis of definitions – Extension Education as a Profession – Adult Education and Distance Education.

# UNIT II

Pioneering Extension efforts and their implications in Indian Agricultural Extension – Analysis of Extension systems of ICAR and SAU – State Departments Extension system and NGOs – Role of Extension in Agricultural University.

# UNIT III

Poverty Alleviation Programmes – SGSY, SGRY, PMGSY, DPAP, DDP, CAPART – Employment Generation Programmes – NREGP, Women Development Programmes – ICDS, MSY, RMK, Problems in Rural Development.

## UNIT IV

Current Approaches in Extension: Decentralised Decision Making, Bottom up Planning, Farming System Approach, Farming Situation Based Extension, Market – Led – Extension, Farm Field School, ATIC, Kisan Call Centres, NAIP.

#### **Practical**

Visit to Gram Panchayat to study on-going Rural Development Programmes, Visit to KVK, NGO and Extension centers of State Agricultural University and State Departments, Bottom up planning, Report preparation and presentations.

# EXT 502 DEVELOPMENT COMMUNICATION AND 2+1 INFORMATION MANAGEMENT

# **Objective**

In this course, students will learn about the concept, meaning and process of communication and various methods and modern media of communication. Besides, the students will also learn the information management and journalistic writing of various information materials and also study their readability.

# **Theory**

# UNIT I

Communication process – concept, elements and their characteristics – Models and theories of communication – Communication skills– fidelity of communication, communication competence and empathy, communication effectiveness and credibility, feedback in communication, social networks and Development communication – Barriers in communication, Message – Meaning, dimensions of a message, characteristics of a good message, Message treatment and effectiveness, distortion of message.

## UNIT II

Methods of communication – Meaning and functions, classification. Forms of communication – Oral and written communication, Non-verbal communication, interpersonal communication, organizational communication. Key communicators – Meaning, characteristics and their role in development.

# UNIT III

Media in communication – Role of mass media in dissemination of farm technology, Effect of media mix for Rural People. Modern communication media – Electronic video, Tele Text, Tele conference, Computer Assisted Instruction, Computer technology and its implications.

# UNIT IV

Agricultural Journalism as a means of mass communication, Its form and role in rural development, Basics of writing – News stories, feature articles, magazine articles, farm bulletins and folders. Techniques of collection of materials for news stories and feature articles; Rewriting Art of clear writing, Readability and comprehension testing procedures; photo journalism, communicating with pictures, Radio and TV Journalism, Techniques of writing scripts for Radio and TV.

# **Suggested Readings**

# EXT 503 DIFFUSION AND ADOPTION OF INNOVATIONS 2+1

# **Objective**

The students will learn how the agricultural innovations spread among the farmers in the society by getting into the insights of diffusion concept and adoption process, stages of adoption and innovation decision process, adopter categories and their characteristics, opinion leaders and their characteristics, attributes of innovations, and factors influencing adoption. In addition, the students would be learning various concepts related to diffusion and adoption of innovations.

# **Theory**

# UNIT I

Diffusion – concept and meaning, elements; traditions of research on diffusion; the generation of innovations; innovation-development process; tracing the innovation-development process, converting research into practice.

# UNIT II

The adoption process- concept and stages, dynamic nature of stages, covert and overt processes at stages, the innovation-decision process - a critical appraisal of the new formulation.

## UNIT III

Adopter categories – Innovativeness and adopter categories, adopter categories as ideal types, characteristics of adopter categories; Perceived attributes of Innovation and their rate of adoption, factors influencing rate of adoption.

# UNIT IV

Diffusion effect and concept of over adoption, opinion leadership-measurement and characteristics of opinion leaders, monomorphic and polymorphic opinion leadership, multi-step flow of innovation; concepts of homophily and heterophily and their influence on flow of innovations; Types of innovation-decisions – Optional, Collective and Authority and contingent innovation decisions; Consequences of Innovation-Decisions – Desirable or Undesirable, direct or indirect, anticipated or unanticipated consequences; Decision making – meaning, theories, process, steps, factors influencing decision – making.

# **Practical**

Case studies in individual and community adoption process, content analysis of adoption studies, Identification of adopter categories on a selected technology, study of attributes of current farm technologies, Identification of opinion leaders, Sources of information at different stages of adoption on a selected technology, study of factors increasing or retarding the rate of adoption, presentation of reports on adoption and diffusion of innovations.

## **Suggested Readings**

Dasgupta. 1989. Diffusion Agricultural Innovations in Village India. Wiley Eastern.

# EXT 504 RESEARCH METHODS IN BEHAVIOURAL SCIENCE 2+1 Objective

This course is designed with a view to provide knowledge and skills in methods of behavioural sciences research and student will learn the Statistical Package for Social Sciences (SPSS) for choosing appropriate statistics for data analysis.

# **Theory**

# UNIT I

Research – Meaning, importance, characteristics. Behavioural sciences research – Meaning, concept and problems in behavioural sciences research. Types and methods of Research – Fundamental, Applied and Action research, Exploratory, Descriptive, Diagnostic, Evaluation, Experimental, Analytical, Historical, Survey and Case Study. Review of literature – Need, Search Procedure, Sources of literature, Planning the review work. Research problem – Selection and Formulation of research problem and guiding principles in the choice of research problem, Factors and criteria in selection of research problem, statement of research problem and development of theoretical orientation of the research problem.

#### UNIT II

Objectives - Meaning, types and criteria for judging the objectives. Concept and Construct - Meaning, role of concepts in research and Conceptual frame work development in research. Variable – Meaning, types and their role in research. Definition - Meaning, characteristics of workable definitions, types and their role in research. Hypothesis -Meaning, importance and functions of hypothesis in research, Types of hypothesis, linkages, sources, problems in formulation and criteria for judging a workable hypothesis. Measurement – Meaning, postulates and levels of measurement, Use of appropriate statistics at different levels of measurement, criteria for judging the measuring instrument and importance of measurement in research. Validity - Meaning and methods of testing. Reliability - Meaning and methods of testing. Sampling - Universe, Sample and Sampling-Meaning, basis for sampling, advantages and limitations, size and factors affecting the size of the sample and sampling errors - Methods of elimination and minimizing, Maximincon Principle, Sampling – Types of sampling and sampling procedures.

## **UNIT III**

Research Designs – Meaning, purpose and criteria for research design, Types, advantages and limitations of each design. Experimental design – Advantages and limitations. Data Collection devices - Interview – Meaning, purpose, types, techniques of interviewing and advantages and limitations. Enquiry forms and Schedules – Meaning, types of questions used, steps in construction and advantages and limitations in its use. Questionnaires – Meaning, difference between schedule and questionnaire,

types of questions to be used, pre – testing of the questionnaires or schedules and advantages and limitations. Check lists – Meaning, steps in construction, advantages and limitations in its use. Rating scales – Meaning, types, limits in construction, advantages and limitations in its use.

Observation – Meaning, types, tips in observation, advantages and limitations in its use. Case studies – Meaning, types, steps in conducting, advantages and limitations in its use. Social survey – Meaning, objectives, types and steps in conducting, advantages and limitations.

## UNIT IV

Data processing – Meaning, coding, preparation of master code sheet, analysis and tabulation of data, Statistical Package for Social Sciences (SPSS) choosing appropriate statistics for data analysis based on the level of measurement of variables. Report writing – Meaning, guidelines to be followed in scientific report writing, References in reporting.

#### **Practical**

Selection and formulation of research problem - Formulation of objectives and hypothesis-Selection of variables based on objectives-Developing the conceptual framework of research. Operationally defining the selected variables-Development of data collection devices.-Testing the validity and reliability of the data collection instruments.- Pre-testing of the data collection instrument-Techniques of interviewing and collection of data using the data collection instruments-Data processing, hands on experiences on SPSS, coding, tabulation and analysis. Formulation of secondary tables based on objectives of research. Writing report, Writing of thesis and research articles-Presentation of reports.

Research. Himalaya Publ.Home.

## EXT 505 E- EXTENSION

2+1

# **Objective**

Students will gain knowledge and skills in understanding the concepts of Information and communication technologies and how these ICT tools can be used for Agricultural Extension. Besides, he studies various ICT projects

which are successful in delivering the services to the clientele fulfilling the objective of Transfer of Technology i.e. Reaching the unreached.

# **Theory**

UNIT I

ICTs- Concept, definition, tools and application in extension education.

Reorganizing the extension efforts using ICTs, advantages, limitations and opportunities.

# UNIT II

ICTs projects, case studies in India and developing world. Different approaches (models) to ICTs. ICT use in field of extension- Expert systems on selected crops and enterprises; Self learning CDs on package of practices, diseases and pest management, Agricultural web sites and portals related crop production and marketing etc.

# **UNIT III**

Community Radio, Web, Tele, and Video conferencing. Computer Aided Extension. Knowledge management, Information kiosks, Multimedia. Online, Offline Extension. Tools-Mobile technologies, e-learning concepts. UNIT IV

ICT Extension approaches-pre-requisites, information and science needs of farming community. Need integration. Human resource information. Intermediaries. Basic e-extension training issues. ICT enabled extension pluralism. Emerging issues in ICT.

## **Practical**

Agril.content analysis of ICT Projects. Handling of ICT tools. Designing extension content. Online extension service. Project work on ICT enabled extension. Creation of extension blogs. Visit to ICT extension projects.

# Suggested Readings

Batnakar S & Schware R. 2000. *Information and Communication Technology in Development- Cases from India*. Sage Publ.

Meera SN. 2008. ICTs in Agricultural Extension: Tactical to Practical. Ganga-Kaveri Publ. House. JangamWadiMath, Varanasi.

Willem Zip. 1994. Improving the Transfer and Use of Agricultural Information - A Guide to Information Technology. The World Bank, Washington.

# EXT 506 ENTREPRENEURSHIP DEVELOPMENT AND 2+1 MANAGEMENT IN EXTENSION

## **Objective**

The first part of the course is intended to provide overall picture of planning and development of enterprises for extending sustainable livelihoods for rural people. The second part of the course is structured to help the students to gain knowledge and skills in different concepts and techniques of management in extension organizations.

## Theory

## UNIT I

Entrepreneurship – Concept, characteristics, Approaches, Theories, Need for enterprises development. Agri – entrepreneurship – Concept, characteristics, Nature and importance for sustainable Livelihoods. Traits of entrepreneurs – Risk taking, Leadership, Decision making, Planning, Organising, Coordinating and Marketing, Types of Entrepreneurs. Stages

of establishing enterprise – Identification of sound enterprise, steps to be considered in setting up an enterprise, feasibility report, product selection, risk and market analysis, legal requirements. Project Management and Appraisal – Market, Technical, Financial, Social Appraisal of Projects.

### **UNIT II**

Micro enterprises - Profitable Agri enterprises in India - Agro Processing,

KVIC industries. Micro financing – meaning, Sources of Finance, Banks, Small scale industries development organizations. Marketing for enterprises – Concept, planning for marketing, target marketing, Competition, market survey and strategies, Product sales and promotion. Gender issues in entrepreneurship development – Understanding gender and subordination of women, Gender as a development tool, Policy approaches for women entrepreneurship development. Success and Failure stories for enterprises – Issues relating to success and failure of enterprises – Personal, Production, Finance, Social, Marketing.

#### UNIT III

Management – Meaning, concept, nature and importance, Approaches to management, Levels of management, Qualities and skills of a manager. Extension Management – Meaning, Concept, Importance, Principles of management, Classification of Functions of Management. Planning – Concept, Nature, Importance, Types, Making planning effective. Change Management – factors, process and procedures. Decision making – Concept, Types of decisions, Styles and techniques of decision making, Steps in DM Process, Guidelines for making effective decisions. Organizing – Meaning of Organization, Concept, Principles, Organizational Structure, Span of Management, Departmentalization, Authority and responsibility, Delegation and decentralization, line and staff relations. UNIT IV

Coordination – Concept, Need, Types, Techniques of Coordination. Interpersonal relations in the organization. Staffing – Need and importance, Manpower planning, Recruitment, Selection, Placement and Orientation, Training and Development – Performance appraisal – Meaning, Concept, Methods. Direction – Concept, Principles, Requirements of effective direction, Giving orders, Techniques of direction. Leadership – Concept, Characteristics, Functions, Approaches to leadership, Leadership styles. Organizational Communication – Concept, Process, Types, Net Works, Barriers to Communication. Managing work motivation – Concept, Motivation and Performance, Approaches to motivation. Supervision – Meaning, Responsibilities, Qualities and functions of supervision, Essentials of effective supervision. Managerial Control – Nature, Process, Types, Techniques of Control, Budgeting, Observation, PERT and CPM, MIS.

# **Practical**

Field visit to Successful enterprises-Study of Characteristics of Successful entrepreneurs Development of Project Proposal -Case Studies of Success / Failure enterprises-Exercise on Market Survey-Field visit to Financial institutions-Simulated exercise to understand management process-Field visit to extension organizations to understand the functions of management -Group exercise on development of short term and long term plan-

Simulated exercise on techniques of decision making-Designing organizational structure -Group activity on leadership development skills.

# **Suggested Readings**

Khanka SS. 1999. Entrepreneurial Development. S. Chand & Co. Singh D.

1995. Effective Managerial Leadership. Deep & Deep Publ. Tripathi PC & Reddy PN. 1991. Principles of Management. Tata McGraw Hill.

Vasanta Desai. 1997. Small Scale Industries and Entrepreneurship. Himalaya Publ. House.

# EXT 507 HUMAN RESOURCE DEVELOPMENT (HRD) 2+1

# **Objective**

To orient the students about key concepts importance, scope & conceptual frame work, growth & development of Human Resource Development, Subsystems of Human Resource Development for extension organization and process of HRD.

# Theory

## UNIT I

Human Resource Development – Definition, Meaning, Importance, Scope and Need for HRD; Conceptual frame work, inter disciplinary approach, function systems and case studies in HRD; HRD Interventions – Different Experiences; Selection, Development & Growth- Selection, Recruitment, Induction Staff Training and Development, Career planning; Social and Organizational Culture: Indian environment perspective on cultural process and social structure, society in transition; Organizational and Managerial values and ethics, organizational commitment; Motivation productivity – job description – analysis and evaluation; Performance Appraisal.

# UNIT II

Human Resource management: Collective bargaining, Negotiation skills; Human Resource Accounting (HRA): What is HRA? Why HRA? Information Management for HRA and Measurement in HRA; Intra personal processes: Collective behaviour, learning, and perception; Stress and coping mechanisms; Inter-Personal Process, Helping Process – communication and Feedback and interpersonal styles; Group & Inter group process: group information and group processes; Organizational communication, Team building Process and functioning, Conflict management, Collaboration and Competition; HRD & Supervisors: Task Analysis; Capacity Building – Counseling and Mentoring; Role of a Professional Manager: Task of Professional Manager – Responsibility of Professional Manager; Managerial skills and Soft Stills required for Extension workers; Decision Making: Decision Making models, Management by Objectives; Behavioural Dynamics: Leadership styles – Group dynamics.

## UNIT III

Training – Meaning, determining training need and development strategies – Training types, models, methods and evaluation; Facilities for training – Trainers training – techniques for trainees participation; Research studies in

training extension personnel; Main issues in HRD: HRD culture and climate – organizing for HRD – emerging trends and Prospective.

## **Practical**

Visit to different training organizations to review on going activities & facilities; Analysis of Training methods followed by training institutions for farmers and extension workers Studies on evaluation of training programmes; Study of HRD in organization in terms of performance,

organizational development, employees welfare and improving quality of work life and Human resource information, Presentation of reports.

# EXT 508

# VISUAL COMMUNICATION

2+1

# **Objective**

This course is intended to give a clear perspective about the importance of visuals and graphics in communication. The course starts with the delineating about the characteristics of visuals and graphics followed by its main functions, theories of visual perception and its classification and selection. Further, the course deals with the designing the message, graphic formats and devices and presentation of data. It makes the students to understand, prepare and present the scientific data effectively by using low cost visuals. The course also exposes the students to various Digitized video material in multimedia and also enable to design visuals for print, TV and know-how about scanning of visuals.

# **Theory**

### UNIT I

Role of visuals & graphics in Communication. Characteristics of visuals & graphics. Functions of visuals and graphics. Theories of visual perception. Classification and selection of visuals.

#### UNIT II

Designing message for visuals, Graphic formats and devices. Presentation of Scientific data. Principles and procuction of low cost visuals.

# **UNIT III**

Photographs- reprographic visuals. PC based visuals. Degitized video material in multimedia production. Designing visuals for print and TV and video.

# UNIT IV

Pre-testing and evaluation of visuals. Scanning of visuals.

#### **Practicals**

Preparation of low cost projected and Non-Projected visuals. Designing and layout of charts, posters, flash cards etc. Power point presentations. Generating computer aided presentation graphics. Scanning and evaluation of visuals.

# **Suggested Readings**

Bhatia A. 2005. *Visual Communication*. Rajat Publications, New Delhi. Edgar Dale 1970. *Audio Visual methods in Teaching*. Holt, Rinehart & Winston.

James WB, Richard BL, Fried F Harcleroad. 1952. A.V. Instructional Material & Methods. Mc.Graw Hill.

Reddy YN. 1998. *Audio Visual Aids in Teaching, Training and Extension*. Haritha Publ. House, Hyderabad.

# EXT 509 PARTICIPATORY METHODS FOR TECHNOLOGY 1+1 DEVELOPMENT AND TRANSFER

# **Objective**

This course is intended to orient the students with the key concepts, principles process of different participatory approaches for technology development and transfer and also to expose the students with various participatory tools and techniques like space related, time related, relation oriented methods. Besides the students will be learning the preparation of action plans participatory monitoring and evaluation.

## **Theory**

## UNIT I

Participatory extension – Importance, key features, principles and process of participatory approaches; Different participatory approaches (RRA, PRA, PLA, AEA, PALM, PAR, PAME, ESRE, FPR) and successful models.

# UNIT II

Participatory tools and techniques. Space Related Methods: village map (social & resource), mobility services and opportunities map and transect; Time related methods: time line, trend analysis, seasonal diagram. Daily activity schedule, dream map; Relation oriented methods: cause and effect diagram (problem tree), impact – diagram, well being ranking method, Venn diagram, matrix ranking, livelihood analysis.

#### UNIT III

Preparation of action plans, concept and action plan preparation; Participatory technology development and dissemination; Participatory planning and management, phases and steps in planning and implementation aspects; Process monitoring, participatory evaluation.

## **Practical**

Simulated exercises on space related methods, time related method and relation oriented methods; Documentation of PTD and dissemination; Preparation of action plan; Participatory monitoring and evaluation of developmental programmes.

# **Suggested Readings**

Adhikary. 2006. Participatory Planning and Project Management in Extension Science. Agrotech Publ. Academy.

Mukharjee N. 2002. *Participatory Learning and Action*. Concept Publ. Co. Singh BK. 2008. *PRA/PLA and Participatory Training*. Adhyayan Publ. & Distr.

Somesh Kumar. 2002. Methods for Community Participation. Vistaar Publ.

# EXT 510 GENDER SENSITIZATION FOR DEVELOPMENT 1+1 Objective

In this course the students will learn about an overview of the concept of gender and gender balance on development and develop skills of identifying gender roles, rights, responsibilities and relationships on development. Besides the students will also learn the attitudinal change to internalize gender equity concerns as fundamental human rights and also enhance the capability for identifying and analyzing gender issues in agriculture and allied sectors.

# **Theory**

# UNIT I

Gender concepts, issues and challenges in development; Gender roles, gender balance, status, need and scope; Gender analysis tools and techniques.

## UNIT II

National policy for empowerment of women since independence; Developmental programmes for women; Gender mainstreaming in agriculture and allied sectors -need and relevance; Gender budgeting - A tool for empowering women.

# UNIT III

Women empowerment –Dimensions; Women empowerment through SHG approach; Women entrepreneurship and its role in economic development; Public Private Partnership for the economic empowerment of women; Building rural institution for women empowerment; Women human rights; Action plans for gender mainstreaming.

### **Practical**

Visits to rural institutions of women for studying in the rural institutions engaged in Women empowerment; Visits to entrepreneurial unit of women for studying the ways and means of establishing entrepreneurship units for Women and their development and also SWOT analysis of the Unit; Visit to Center for women development - NIRD to study the different activities related to projects and research on gender; Visit to gender cell, Office of

the Commissioner and Director of Agriculture, Hyderabad, to study the mainstreaming of gender concerns and gender budget of the department.

# **Suggested Readings**

Grover I & Grover D. 2002. *Empowerment of Women*. Agrotech Publ. Academy.

Porter F, Smyth I & Sweetman C.1999. *Gender Works: Oxfarm Experience in Policy and Practice*. Oxfarm Publ.

Raj MK. 1998. *Gender Population and Development*. Oxford Univ. Press. Sahoo RK & Tripathy SN. 2006. *SHG and Women Empowerment*. Anmol Publ.

Sinha K. 2000. Empowerment of Women in South Asia. Association of Management Development Institution in South Asia, Hyderabad.
Thakur Joshi S. 1999. Women and Development. Mittal Publ.

# EXT 511 PERSPECTIVES OF DISTANCE EDUCATION 1+1 Objective

The course is intended to orient the students with the concept of Distance Education, Characteristics of Distance Education, Evolution, Methods of Distance Education, Different Approaches in Planning Distance Education, Educational Technology in Distance Education, Management of Resources for distance education, Strategies for maximizing the reach and programme evaluation and quality assessment.

# **Theory**

## UNIT I

Distance Education – Introduction Meaning, Concept, Philosophy and its work ethics, characteristics of Distance Education – Evolution and Historical view of Distance Education – Theory Methodology, and Epistemology. Dimensions of Distance Education, Scope and difficulties. Open Education – Non-formal Education, Continuing Education, Education by correspondence.

# UNIT II

Forms and systems of Distance and Open Education, Modes of Teaching and Learning in Distance Education, Methods of Distance Education, Significance of Distance Education in Teacher Education.

#### UNIT III

Planning Distance Education – A Systems Approach Student Learning – Course Planning, The target groups – Barriers to learning in Distance Education – Planning and Management of Networked Learning.

## UNIT IV

Educational Technology is Distance Education Application of information and Educational Technologies in Distance Education, Development of Course and Course material, Management of resources, processes, Forms of Instructional material in Distance Education and Media Development and Production in Distance Education - Video Classroom Strategy in Distance Education - Strategies for maximizing the reach - services to students, programme Evaluation - performance indicators and Quality Assessment.

#### **Practical**

Visit to the University which is implementing the Distance Education Programmes. Detailed Study of their programme in relation to Educational Technology, Methodology, Curriculum Development, Evaluation and Assessment. Exercise on development of curriculum for Distance Education exclusively for farming community.

# **Suggested Readings**

Holmberg B. 1995. *Theory and Practice of Distance Education*. Routiedge Publ..

Lakshmi Reddy MV. 2001. Towards Better Practices in Distance Education. Kanishka Publ.

More MG. 2003. *Hand Book of Distance Education*. Lawrence Erlbaum Associates Publ.

Panda.S. 2003. Planning & Management in Distance Education. Kogan Page Publ.

Pathak CK. 2003. Distance Education: Prospects and Constraints. Rajat Publ.

Sharma DC. 2005. Management of Distance Education. Anmol Publ. Sharma M. 2006. Distance Education: Concepts and Principles. Kanishka Publ.

# EXT 512 MARKET LED EXTENSION MANAGEMENT 1+1 Objective

The student will learn the significance of post harvest management& value addition in present market environment and the challenges and future strategy for market led extension management. Also identifies the information sources and develop strategy for market intelligence and the marketing infrastructure, multilevel marketing and linkages for market led extension. In addition the students would be learning the public private partnerships for market led extension management, the features of contract farming, WTO its implications on agriculture and Understanding the role of IT for market intelligence.

## **Theory**

## UNIT I

Agricultural extension at cross roads; Changing scenario of agricultural extension at the national level; Market led extension – emerging perspectives; Market led extension – issues and challenges; Dimensions of market led extension.

#### UNIT II

Agricultural marketing an overview; Development of a marketing plan, pricing concepts and pricing strategy; Consumer behaviour; Marketing communication and promotional strategies; The marketing research process; Agricultural trade liberalization and its impact; International marketing opportunities; Implications of AOA, TRIPS and IPRs agreements on agriculture; Agreement on SPS and TBT - an over view; Commodity features marketing.

# UNIT III

Public private linkages in market led extension; Role of SHG in market led extension; Contact farming – a viable approach to meet market challenges; IT enabled approaches for market led extension and communication;

Weather service and crop modeling - An effective tool in market led

extension.

## **Practical**

Identification and analysis of different marketing sources for agricultural commodities. Development of strategy for an effective market intelligence system; Development of suitable marketing plan to suite rural situation; Visit to APEDA, Rythu Bazaars to study the processes and procedures related to market-led extension.

# **Suggested Readings**

Kaleel FMH & Krisnamurthy J. 2007. *Market Led Extension Dimensions and Tools*. Agro Tech Publ. Academy.

Rajmanohar TP & Kumaravel KS. 2006. *Contract Farming in India*. ICFAI Univ. Press, Hyderabad.

Subbalakshmi V. 2005. *Globalization - Indian Experience*. ICFAI Univ. Press, Hyderabad.

Suresh K. 2005. Rural Markets - Emerging Opportunities. ICFAI Univ. Press, Hyderabad

# EXT 601 ADVANCES IN AGRICULTURAL EXTENSION 2+1 Objective

By the End of the course student will be able to

- Critically analyze different Agricultural Extension approaches
- Understand Agricultural Knowledge Information System (AKISs) ITK
- Understand Advances in Extension Cyber extension, ICT enabled extension services; Market Led Extension, Public Private Partnership, Mainstreaming gender in extension organizational Innovations.
- Visualize implications of WTO AOA and develop extension strategies.
- Understand extension reforms and Farmer Field Schools Decentralized Decision Making, bottom up planning, ATMA, FSBE & CIGs etc., ATIC, IVLP & Kisan Call Centres

# **Theory**

## UNIT I

Approaches of Agricultural Extension: A critical analysis of different approaches of agricultural extension. Importance and relevance of indigenous knowledge system, identification and documentation of ITK, Integration of ITK system in research formulation, Concept of Agricultural Knowledge and Information System, Training of Stakeholders of AKIS.

## UNIT II

Cyber Extension - Concept of cyber extension, national and international cases of extension projects using ICT and their impact of agricultural extension, alternative methods of financing agricultural extension - Scope, limitations and experience and cases. Research - Extension -Farmer - Market linkage: Importance, Scope, Implications etc., Market - Led Extension, Farmer - Led Extension, Concept of Farm Field School, Farm School, Public - Private Partnership: Meaning, Models, Identification of various areas for partnership. Stakeholder's analysis in Extension. Main streaming gender in Extension - Issues and Prospects.

# UNIT III

Implications of WTO - AOA for extension services, re-orientation of extension services for agri-business and marketing activities, GOI-NGO collaboration to improve efficiency of extension.

# UNIT IV

Extension and contemporary issues: Extension and issues related to rural poverty. Privatization of Extension. Intellectual Property Rights (IPRs). Extension Reforms in India - Decentralized decision making, Bottom up planning, Farming System and Situation based Extension Delivery System, Extension delivery through Commodity Interest Groups. Organization innovations in Extension - ATIC, IVLP, Kisan Call Centres.

#### **Practical**

Analysis of ITK systems, cases on integration of ITK and formal research system, Analysis of cases on cyber extension and privatization of extension. Analysis of ATMA and SREP. Practicing bottom up planning. Visit to Public-Private -Farmer partnership. Learnings from Food and Nutritional Security and bio-diversity Projects and Programmes.

# **Suggested Readings**

# EXT 602 ADVANCED DESIGNS AND TECHNIQUES IN 2+1 SOCIAL SCIENCE RESEARCH

# **Objective**

By the End of the course student will be able to

- Develop & Standardize Attitude scale using different techniques of attitude scale construction.
- Develop skills of using Projected & Semi Projected & Semi Projected Techniques, Computer Package analysis and PRO Tools in Extension Research.

# Theory

# UNIT I

Scaling technique - meaning, types, principles, steps and quality, techniques of attitude scale construction - Paired comparison, Equal appearing intervals, Successive Intervals, Summated ratings, Scalogram analysis, Scale discrimination technique, Reliability and Validity of Scales.

Sociometrics, content analysis, case studies, Q-sort techniques, Semantic different technique.

# <u>UNIT II</u>

Projective and Semi projective techniques, Critical incident techniques, Computer packages for analysis - usage in Extension Research. Knowledge scale measurement. Participatory tools and techniques in behaviour Research - Data collection and Evaluation. Impact analysis, e-data collection and information analysis.

#### **Practical**

Practice in constructing a scale and use of scale in various situations. Reliability and validity of the scales developed, Application of Semi Projective and Projective techniques. Content analysis, case studies. Practicing participatory tools and techniques. Hands on experience on Computer Preparation and Data Collection instruments, review of previous studies.

# **Suggested Readings**

# EXT 603 ADVANCES IN TRAINING TECHNOLOGY 2+1 Objective

By the end of the Course student will be able to

- Plan and design a training programme
- Plan & Develop effective training sessions
- Manage difficult situations while organizing training programmes
- Use different advanced participatory training methods

# Theory

## UNIT I

Paradigm shift in training - learning scenario, Training Approaches - Experiential learning - laboratory - organization development (system)

approaches; Training Design, Designing an effective training programme, Harmonizing training needs, Course Objective, content and methods.

# UNIT II

Designing an effective training session - the semantics involved, Designing experiential training sessions, simulation exercises, and openness in training transaction - managing dilemmas, ambivalence and conflicts and confusion (for both trainers and trainees).

#### UNIT III

Recent Training Techniques for understanding and facilitation team building, group dynamics, motivation and empowerment, laboratory methods: micro-lab process work, and sensitivity training, Psychological instruments as training tools: TAT, Inventories, Cases, etc.

#### UNIT IV

Participatory Training Techniques - Lecture, Brainstorming, Group discussion and Training Games. Role Play, Psycho-drama, Coaching, Counseling, etc., Trainer's roles and dilemmas, Factors Effecting Training Effectiveness and Training Evaluation.

## **Practical**

Techniques of participatory training need assessment. Formulation of Course Objective, design of training programmes. Simulation exercises. Participatory training methods - Role Play & Brainstorming, Group discussion and Counseling and Conducting experiential learning sessions. Training evaluation - Techniques of Knowledge, Skill & Attitude evaluation. Visit to training institutions and study of training technologies followed.

# **Suggested Readings**

Sethy ED. 2003. A Practical Hand Book on Training. Anmol Publ.

# EXT 604 ORGANIZATIONAL DEVELOPMENT 2+1 Objective

By the end of the course student will be able to

- Understand & Study the Organization in terms of types, Characteristics, Needs, Motives, Organization behaviour, Organization Communication, Organization development and Individual behaviour in organization.
- To anlayse the factors effecting organizational effectiveness and distinguish between functional and non functional organization.

# Theory

#### UNIT I

Introduction to organizations: Concept and Characteristics of organizations, Organizational Behvaiour - Context and concept - levels of organizations -

formal and informal organizations, Theories of organizations: Nature of organizational theory - classical theories - features of Bureaucracy - administrative theory and Scientific management - Neo-classical theories - the human relations movement - modern theory.

#### UNIT II

Systems approach to study organization needs and motives - Attitude, values and ethical behaviour - alienation and work - work motivation - communication and interpersonal behaviour - organization communication - leadership behaviour - decision making, problem solving techniques - organizational climate - change proneness and resistance to change, Organizational change, Organizational structure - Process in organizing - Dimension of Motivation Climate.

# **UNIT III**

Departmentation - Span of Management - Delegation of authority - Centralization and decentralization - line and staff organization - functional organization - divisonalisation - Project organization - Matrix organization - free form organization - top management structure.

# UNIT IV

Individual behaviour in organization. Fundamentals of Human relations and Organizational behaviour, Groups and teams - Organisational culture and performance. Dynamics of Organization behaviour - leadership conflict situations and inter group behavior- Organisational Development - Factors effecting organization effectiveness. Creativity, leadership, motivation and organization development.

#### **Practical**

Analysis of organization in terms of process - attitudes and values, motivation, leadership. Simulation exercises on problem-solving - Study of organizational climate in different organizations. Study of organizational structure of development departments, Study of departmentalization, span of control delegation of authority, decisions making patterns, Study of individual and group behaviour at work in an organization. Conflicts and their management in an organization. Comparative study of functional and non-functional organsiations and drawing factors for organizational effectiveness.

Stephen RR. 1999. Organizational Behaviour. 5<sup>th</sup> Ed. Practice Hall of India.

# EXT 605 ADVANCED INSTRUCTIONAL TECHNOLOGY 2+1

# **Objective**

By the end of the course student will be able to

- Understand Agricultural Education Scenario in the country and Curriculum development process
- Plan & Prepare and present course outline, Lesson Plan & Skill plan
- Develop appropriate Teaching & Learning Styles
- Use innovative instructional aids & methods

# **Theory**

#### UNIT I

Concepts in Instructional Technology, Scope of Instructional Technology. History of agricultural education in India. Guidelines for curriculum development in Agricultural Universities. Curriculum design development.

## UNIT II

Course outline, Lesson plans for theory and practicals. Teaching and learning styles. Theories of learning. Cognitive levels. Instructional Course Objective. Motivation of students.

## UNIT III

Instructional Methods. Experiential learning cycle. Innovative Instructional Aids. Computer Assisted Instruction. Programmed instruction technique. Team Teaching. E-Learning, Art of Effective Communication. Distance education. Student evaluation - Question Bank. Appraisal of Teacher Performance. Review of research in Instructional Technology.

### **Practical**

Formulation of instructional Course Objective. Development and presentation of course outlines. Preparation & presentation of lesson plans for theory & practical with CAI design. Preparation of innovative low cost instructional aids. Development of model question bank. Preparation of schedule for teacher evaluation. Visit to Distance Education centre. Study of research reviews and Presentation of reports.

# EXT 606 THEORY CONSTRUCTIONS IN SOCIAL SCIENCES 2+0 Objective

By the end of the course student will be able to develop skills of theory building and scientific application of theoretical concept in Social Sciences by applying appropriate statistical tests.

# **Theory**

#### UNIT I

Importance of theory constructions in social science. Theory: Meaning, elements, Ideal Criteria, Functions, Types. Definitions: Meaning, types and Rules.Generalizations: Meaning, Classification. Relationship: Meaning Types.

# UNIT II

Terminologies used in theory constructions: Axiom, Postulate, Proposition, Theorem, Fact, Concept, Construct, Probability and Measurement Basic Derived. Steps in theory building - Axiomatic Techniques, Historical approaches. Scientific application Theoretical concept in Social Sciences. Test of Theory: Applying appropriate statistical tests.

# **Suggested Readings**

Blalock HM. Theory Construction: Form verbal to Mathematical Formulations. Prentice Hall.

Dubin R. Theory Building. The Free Press, New York.

Gibbs JP. Sociological Theory Construction. The Dryden Press, Illionis. Hage J. Techniques and Problems of Theory Constructions in Sociology.

Wionton CA. Theory and Measurement in Sociology. John Wiley & Sons.

# EXT 607 ADVANCED MANAGEMENT TECHNIQUES 2+1 Objective

By the end of the course student will be able to

- Develop understanding on concept of MIS, its scope in Agriculture Extension Organization.
- Understand, Develop and Evaluate the MBO System
- To cope up with stress, Resolve conflicts and develop effective inter personal communication skills using Transactional analysis.
- To plan & use, DSS, AI, ES, PERT, CPM

# Theory

## UNIT I

Management Information System (MIS): Basic concepts, types of information needed at various levels, design of MIS in an agricultural extension organization. Scope for computerization, system alternatives and Evaluation. Implementation, operation and maintenance of the system.

# UNIT II

Management by Course Objective (MBO): Elements of the MBO system.

The Process of MBO. Making MBO effective. Evaluation of the MBO system - strengths and weaknesses. Transactional Analysis (TA): Ego states, transactions, inter relationships, strokes, stamps.

# UNIT III

Managing Organizational Stress: Sources of stress in organization, effect of stress. Coping mechanisms and managing stress, Stress management, Team Building Process: Types of teams. Steps in teamwork, Facilitators and barriers to effective relationships, nature of prejudice, tips in reducing interpersonal conflicts, inter-group conflict, resolving techniques. Confect management, tips in reducing interpersonal conflicts.

### UNIT IV

Decision Support Systems (DSSs): Basic information about Artificial Intelligence (AI) Expert System (ESs), their future applications in extension system. Forecasting techniques - time series analysis and Delphi, decision making and talent management PERT, CPM Techniques and time management.

## **Practical**

Managements Information system, in research & development organizations. Study of Management by Course Objective in an organization. Transactional Analysis, exercises on Team building process, coping skills with organizational stress, exercises on Decision Support Systems (DSSs). Practicals exercise on forecasting techniques, Visit to Management organizations.

# EXT 608 MEDIA MANAGEMENT

2+1

# **Objective**

- To familiarize the students with the working of print, electronic, New Media & Traditional folk media.
- To develop working skills needed for Print, Radio and T.V. Journalism to reach farming community.
- To develop in students an understanding on Mass Communication Process and Media Management its impact on the society.
- To develop writing skills for different media.

# Theory

## UNIT I

Media Management – Introduction, Definition, Principles and Significance of Management. Media Ownership patterns in India – Proprietorship, Partnership, private Ltd, Public companies, Trusts, Co-operatives, Religious Institutions (Societies) & Franchisees (Chains). Marketing Function – Product, Price, and Placement & Promotions.

# UNIT II

Mass Communication – Meaning, Concept, Definition and Theories of Mass Communication. The Mass Media – History, functions, uses and Theories of Media. Journalism – Meaning, definition, Scope, functions and different types of Journalism. Journalism as communication tool. Farm Journalism – meaning and Developments in Farm Journalism in India. Different problems with Farm Journalism. Print Media – History, the role of the press, news, Types of News, electronics of News and Sources of News, the making of newspaper & magazines, press codes and ethics, Media Laws. News story – Principles of writing, structure a news story, procedure in writing the news story and the elements of style. Success stories & feature articles – writing for success & feature articles, Types of Feature articles. Information materials – Types of information materials and user. Techniques in book Publishing. Editing – Principles, Tools & Techniques and art of Proof Reading – Techniques, Measuring Readability of writing.

## UNIT III

Electronic Media-Role and Importance of Radio -History, Radio Role in TOT, writing and presentation techniques, Different Programmes of Farm Broadcast, developing content for farm broadcast, Role of FM Radio in Agriculture, Ethics of Broad casting, Broadcasting Policy and code. Community Radio – Concept, meaning, role in TOT, Cases of Community radio.

Television – History - Role in TOT , Fundamentals of Television Production, Techniques of Script writing for TV, Visual Thinking, language & Style, Farm Telecast programmes, cable and satellite TV and their impact, Ethics of Telecasting, policy and code.

Video Production Technology – Potential and its utilization, Typology of farm Video production, Types of Video Production and equipment used in the production, Procedure or Technique of video production.

Cassette Technology – Role in TOT, Techniques of production of cassettes for the farming community.

Traditional Media – Role of Folk Media in TOT and integration with electronic media.

# **UNIT IV**

Advances in communication Technology – Management of Agricultural Information System (MAIS). Use of computers in Agriculture – Application of IT in Agriculture. Use of Modern Communication Medium-Electronic Video, Teletext, tele conference, Computer assisted instruction, Video conferencing, - Features, Advantages, Limitations and risk factory involved in New Media. Designing and developing of communication and

media strategy for developmental programmes. Online journalism scope & importance.

## **Practical**

Exercise on Writing for Print Media – Writing News / Success Stories / Feature articles for different topics related to Agriculture & allied fields. Exercise of editing & proof reading the Farm News for News papers – different types of intro and leads. Exercise of Writing for Radio, TV, Preparation of story board for farm Video Production – Script writing for Radio and T.V. Visit to media management organizations for studying the principles, procedures and processes in managing the media. Participation and

Interaction through video conference. Developing communication & Media Strategy for selected developmental programme / activity.

# EXT 609 TRANSFER OF TECHNOLOGY IN AGRICULTURE 2+1 Objective

By the end of the Course student will be able to

- Develop thorough understanding on different systems of Technology Transfer
- Develop appropriate communication & Media Strategy suitable to the System of Technology Transfer
- Analyse the constraints in Systems of Technology Transfer Technology and Suggest suitable Strategies.

# **Theory**

# UNIT I

Technology - Meaning and Concepts - Appropriate technology, transfer of technology - meaning and concepts. Systems of transfer of technology - Knowledge Generating System (KGS) - Knowledge Disseminating System (KDS) - Knowledge Consuming System (KCS) - Input Supplying Agencies System (ISAS).

# UNIT II

Appropriateness of communication media in the system of technology transfer. New communication strategy for transfer and adoption of Agricultural technology. Extension training in transfer of technology.

# UNIT III

Analysis. Constraints in Transfer of Technology, agencies or departments involved in TOT. Extension professional in TOT. Attributes of Technology and its Relation in TOT process. TOT to resource poor farmers. Role of Key communicators or local leaders in TOT. Private and Public partnership in TOT.

## **Practical**

Analysis of Transferred technology. Analysis of knowledge generation and consuming systems. Formulation of communication strategies, Study of attributes of selected fast spreading technologies and slow technologies, study of constraints in TOT, visit to TOT centres of ICAR and SAU, Identification of key communicators, Case studies of Public-Private Partnerships, Visits to the print and electronic media centres to study their role in TOT.

AG. STAT. 566	STATISTICAL GENETICS – I	2+1
AG. STAT. 567	REGRESSION ANALYSIS	1+1
AG. STAT. 568	STATISTICAL COMPUTING	1+1
AG. STAT. 569	TIME SERIES ANALYSIS	1+1
AG. STAT. 570	ACTUARIAL STATISTICS	2+0
AG. STAT. 571	BIOINFORMATICS	2+0
AG. STAT. 572	ECONOMETRICS	2+1
AG. STAT. 573	STATISTICAL QUALITY CONTROL	2+0
AG. STAT. 574	OPTIMIZATION TECHNIQUES	1 + 1
AG. STAT. 575	DEMOGRAPHY	2+0
AG. STAT. 576	STATISTICAL METHODS FOR LIFE SCIENCES	2+0
AG. STAT. 577	STATISTICAL ECOLOGY	2+0
AG. STAT. 578	COMPUTER FUNDAMENTALS AND PROGRAMMING	2+1
AG. STAT. 579	INTRODUCTION TO NETWORKING AND INTERNET	2+1
	APPLICATIONS	
AG. STAT. 591	MASTER'S SEMINAR	1+0
AG. STAT. 599	MASTER'S RESEARCH	10+0

# **NOTE:**

- 1. AG. STAT. 551 and AG. STAT. 552 are supporting courses. These are compulsory for all the students of Statistics / Agricultural Statistics.
- 2. AG. STAT. 560 AG. STAT. 569 are core courses to be taken by all the students of Statistics / Agricultural Statistics.
- 3. AG. STAT. 591 and AG. STAT. 599 are compulsory for all the students of Statistics / Agricultural Statistics.
- 4. A student has to take a minimum of 36 credits course work, excluding the supporting courses, seminar and research.

# 3. Ph. D. (Statistics / Agricultural Statistics)

AG.STAT. 601	ADVANCED STATISTICAL COMPUTING	2+1
AG.STAT. 602	SIMULATION TECHNIQUES	1+1
AG.STAT. 611	ADVANCED STATISTICAL METHODS	2+0
AG.STAT.612	ADVANCED STATISTICAL INFERENCE	3+0
AG.STAT. 613	ADVANCED DESIGN OF EXPERIMENTS	2+0
AG.STAT. 614	ADVANCED SAMPLING TECHNIQUES	2+0
AG.STAT. 615	ADVANCED STATISTICAL GENETICS	2+0
AG.STAT.616	STATISTICAL MODELING	1+1
AG.STAT.617	ADVANCED TIME SERIES ANALYSIS	2+0
AG.STAT.618	STOCHASTIC PROCESSES	2+0
AG.STAT.619	SURVIVAL ANALYSIS	2+0
AG.STAT. 620	ADVANCED BIOINFORMATICS	2+0
AG.STAT. 621	ADVANCED ECONOMETRICS	2+0
AG.STAT. 651	RECENT ADVANCES IN THE FIELD OF SPECIALIZATION	1+0
AG.STAT.691	DOCTORAL SEMINAR I	1+0
AG.STAT.692	DOCTORAL SEMINAR II	1+0
AG.STAT.699	DOCTORAL RESEARCH	45+0

### **NOTE:**

- 1. AG. STAT. 601 and AG. STAT. 602 are supporting courses. These are compulsory for all the students of Statistics / Agricultural Statistics.
- 2. AG. STAT. 691, AG. STAT. 692, AG. STAT. 651 and AG. STAT. 699 are compulsory for all the students of Statistics / Agricultural Statistics.
- 3. A student has to take a minimum of 18 credits course work, excluding the supporting courses, seminar and research.
- 4. A student has to take two seminars.

# 1. Service Courses (For M. Sc. And Ph. D. programs of other disciplines)

# AG. STAT. 501 MATHEMATICAL METHODS FOR APPLIED SCIENCES 2+0

# **Objective**

This course is meant for students who do not have sufficient background of Mathematics. The students would be exposed to elementary mathematics that would prepare them to study their main courses that involve knowledge of Mathematics. The students would get an exposure to differentiation, integration and differential equation.

# **Theory**

#### UNIT I

Variables and functions; limit and continuity. Specific functions. Differentiation: theorems of differentiation, differentiation of logarithmic, trigonometric, exponential and inverse functions, function of a function, derivative of higher order, partial derivatives. Application of derivatives in agricultural research; determination of points of inflexion, maxima and minima in optimization, etc.

## UNIT II

Integration as a reverse process of differentiation, methods of integration, reduction formulae, definite integral; Applications of integration in agricultural research with special reference to economics and genetics, engineering, etc.

#### **UNIT III**

Vectors and vector spaces, Matrices, notations and operations, laws of matrix algebra; transpose and inverse of matrix; Eigen values and eigen vectors. Determinants - evaluation and properties of determinants, application of determinants and matrices in solution of equation for economic analysis.

#### UNIT IV

Set theory-set operations, finite and infinite sets, operations of set, function defined in terms of sets.

# **Suggested Readings**

Harville DA. 1997. *Matrix Algebra from a Statistician's Perspective*. Springer.

Hohn FE. 1973. Elementary Matrix Algebra. Macmillan.

Searle SR. 1982. Matrix Algebra Useful for Statistics . John Wiley.

Stewart J. 2007. Calculus. Thompson.

Thomas GB. Jr. & Finney RL. 1996. Calculus. 9 Ed. Pearson Edu. th

# AG. STAT. 511 STATISTICAL METHODS FOR APPLIED SCIENCES 3+1

## **Objective**

This course is meant for students who do not have sufficient background of Statistical Methods. The students would be exposed to concepts of statistical methods and statistical inference that would help them in understanding the importance of statistics. It would also help them in understanding the concepts involved in data presentation, analysis and interpretation. The students would get an exposure to presentation of data, probability distributions, parameter estimation, tests of significance, regression and multivariate analytical techniques.

# **Theory**

#### UNIT I

Classification, tabulation and graphical representation of data. Box-plot, Descriptive statistics. Exploratory data analysis; Theory of probability. Random variable and mathematical expectation.

## **UNIT II**

Discrete and continuous probability distributions: Binomial, Poisson, Negative Binomial, Normal distribution, Beta and Gamma distributions and their applications. Concept of sampling distribution: chi-square, t and F distributions. Tests of significance based on Normal, chi-square, t and F distributions. Large sample theory.

## **UNIT III**

Introduction to theory of estimation and confidence-intervals. Correlation and regression. Simple and multiple linear regression model, estimation of parameters, predicted values and residuals, correlation, partial correlation coefficient, multiple correlation coefficient, rank correlation, test of significance of correlation coefficient and regression coefficients. Coefficient of determination. Polynomial regression models and their fitting.

Probit regression analysis by least squares and maximum likelihood methods, confidence interval for sensitivity; Testing for heterogeneity.

#### **UNIT IV**

Non-parametric tests - sign, Wilcoxon, Mann-Whitney U-test, Wald Wolfowitz run test, Run test for the randomness of a sequence. Median test, Kruskal-Wallis test, Friedman two-way ANOVA by ranks. Kendall's coefficient of concordance.

## **UNIT V**

Introduction to multivariate analytical tools- Hotelling's  $T^2$  Tests of hypothesis about the mean vector of a multinormal population.

Classificatory problems and discriminant function, D2-statistic and its applications; Cluster analysis, principal component analysis, canonical correlations and Factor analysis.

#### **Practical**

Exploratory data analysis, Box-Cox plots; Fitting of distributions ~ Binomial, Poisson, Negative Binomial, Normal; Large sample tests, testing of hypothesis based on exact sampling distributions ~ chi square, t and F; Confidence interval estimation and point estimation of parameters of binomial, Poisson and Normal distribution; Correlation and regression analysis, fitting of orthogonal polynomial regression; applications of dimensionality reduction and discriminant function analysis; Non-parametric tests.

# AG. STAT. 512 EXPERIMENTAL DESIGNS 2+1

# **Objective**

This course is meant for students of agricultural and animal sciences other than Statistics. Designing an experiment is an integrated component of research in almost all sciences. The students would be exposed to concepts of Design of Experiments so as to enable them to understand the concepts involved in planning, designing their experiments and analysis of experimental data.

# **Theory**

UNIT I

Need for designing of experiments, characteristics of a good design. Basic principles of designs- randomization, replication and local control.

**UNIT II** 

Uniformity trials, size and shape of plots and blocks; Analysis of variance; Completely randomized design, randomized block design and Latin square design.

**UNIT III** 

Factorial experiments, (symmetrical as well as asymmetrical). orthogonality and partitioning of degrees of freedom, Confounding in symmetrical factorial experiments, Factorial experiments with control treatment.

**UNIT IV** 

Split plot and strip plot designs; Analysis of covariance and missing plot techniques in randomized block and Latin square designs; Transformations, crossover designs, balanced incomplete block design, resolvable designs and their applications ~ Lattice design, alpha design - concepts, randomisation procedure, analysis and interpretation of results. Response surfaces. Experiments with mixtures.

UNIT V

Bioassays- direct and indirect, indirect assays based on quantal dose response, parallel line and slope ratio assays potency estimation.

## **Practical**

Uniformity trial data analysis, formation of plots and blocks, Fairfield Smith Law; Analysis of data obtained from CRD, RBD, LSD; Analysis of factorial experiments without and with confounding; Analysis with missing data; Split plot and strip plot designs; Transformation of data; Analysis of resolvable designs; Fitting of response surfaces.

## **Suggested Readings**

Cochran WG & Cox GM. 1957. *Experimental Designs* . 2<sup>nd</sup> Ed. John Wiley. Dean AM & Voss D. 1999. *Design and Analysis of Experiments* . Springer. Federer WT. 1985. *Experimental Designs* . MacMillan.

Pearce SC. 1983. The Agricultural Field Experiment: A Statistical Examination of Theory and Practice . John Wiley.

Design Resources Server: www.iasri.res.in/design.

### **AG. STAT. 521**

### APPLIED REGRESSION ANALYSIS

2+1

## **Objective**

This course is meant for students of all disciplines including agricultural and animal sciences. The students would be exposed to the concepts of correlation and regression. Emphasis will be laid on diagnostic measures such as autocorrelation, multicollinearity and Heteroscedasticity. This course would prepare students to handle their data for analysis and interpretation.

## **Theory**

#### UNIT I

Introduction to correlation analysis and its measures; Correlation from grouped data, Biserial correlation, Rank correlation; Testing of population correlation coefficients; Multiple and partial correlation coefficients and their testing.

UNIT II

Problem of correlated errors; Auto correlation; Durbin Watson Statistics; Removal of auto correlation by transformation; Analysis of collinear data; Detection and correction of multicollinearity; Regression analysis; Method of least squares for curve fitting; Testing of regression coefficients; Multiple and partial regressions.

UNIT III

Examining the multiple regression equation; Concept of weighted least squares; regression equation on grouped data; Various methods of selecting the best regression equation; regression approach applied to analysis of variance in one way classification.

**UNIT IV** 

Heteroscedastic models, Concept of nonlinear regression and fitting of quadratic, exponential and power curves; Economic and optimal dose, Orthogonal polynomial.

### **Practical**

Correlation coefficient, various types of correlation coefficients, partial and multiple, testing of hypotheses; Multiple linear regression analysis, partial regression coefficients, testing of hypotheses, residuals and their applications in outlier detection; Handling of correlated errors,

multicollinearity; Fitting of quadratic, exponential and power curves, fitting of orthogonal polynomials.

## **Suggested Readings**

Draper NR & Smith H. 1998. *Applied Regression Analysis* . 3<sup>rd</sup> Ed. John Wiley.

Ezekiel M. 1963. *Methods of Correlation and Regression Analysis* . John Wiley.

Kleinbaum DG, Kupper LL, Muller KE & Nizam A. 1998. *Applied Regression Analysis and Multivariable Methods* . Duxbury Press.

Koutsoyiannis A. 1978. Theory of Econometrics . MacMillan.

Kutner MH, Nachtsheim CJ & Neter J. 2004. *Applied Linear Regression Models* . 4<sup>th</sup> Ed. With Student CD. McGraw Hill.

## AG. STAT. 531 DATA ANALYSIS USING STATISTICAL PACKAGES 2+1

## **Objective**

This course is meant for exposing the students in the usage of various statistical packages for analysis of data. It would provide the students an hands on experience in the analysis of their research data. This course is useful to all disciplines.

## **Theory**

UNIT I

Use of Software packages for: Summarization and tabulation of data; Descriptive statistics; Graphical representation of data, Exploratory data analysis.

UNIT II

Fitting and testing the goodness of fit of discrete and continuous probability distributions; Testing of hypothesis based on large sample test statistics; Testing of hypothesis using chi-square, t and F statistics.

**UNIT III** 

Concept of analysis of variance and covariance of data for single factor, multifactor, one-way and multi-classified experiments, contrast analysis, multiple comparisons, Analyzing crossed and nested classified designs.

**UNIT IV** 

Analysis of mixed models; Estimation of variance components; Testing the significance of contrasts; Correlation and regression including multiple regression.

UNIT V

Discriminant function; Factor analysis; Principal component analysis; Analysis of time series data, Fitting of non-linear models; Time series data; Spatial analysis; Neural networks.

#### **Practical**

Use of software packages for summarization and tabulation of data, obtaining descriptive statistics, graphical representation of data. Robust Estimation, Testing linearity and normality assumption, Estimation of trimmed means etc., Cross tabulation of data including its statistics, cell display and table format and means for different sub-classifications; Fitting and testing the goodness of fit of probability distributions; Testing the hypothesis for one sample t-test, two sample t-test, paired t-test, test for large samples - Chi-squares test, F test, One way analysis of variance, contrast and its testing, pairwise comparisons; Multiway classified analysis of variance - cross-classification, nested classification, factorial set up, fixed effect models, random effect models, mixed effect models, estimation of variance components; Generalized linear models - analysis of unbalanced data sets, testing and significance of contrasts, Estimation of variance components in unbalanced data sets maximum likelihood, ANOVA, REML, MINQUE; Bivariate and partial correlation, Distances - to obtain a distance matrix, dissimilarity measures, similarity measures; Linear regression, Multiple regression, Regression plots, Variable selection, Regression statistics, Fitting of growth models - curve estimation models, examination of residuals; Discriminant analysis - fitting of discriminant functions, identification of important variables, Factor analysis. Principal component analysis - obtaining principal component, spectral composition; Analysis of time series data - fitting of ARIMA models, working out moving averages. Spatial analysis; Neural networks.

## AG. STAT. 533 STATISTICAL METHODS FOR CROP PROTECTION- I (2+1)

Review of test of significance–t, Z and F test. Review of sampling. Principles of experimental design - replication, randomization and local control, Analysis of variance I: One way classification, Completely randomized design, lsd and DNMRT test. Analysis of variance II: Multi way classification - Randomized Complete Block Design, Control vs Rest analysis, Latin Square Design, missing values, Transformations. Pooled analysis - over space and time, Introduction to simple and multiple correlation and regression. Introduction to Bioassay – LD 50, LD 90, ED 50 and ED 90,

## AG. STAT. 534 STATISTICAL METHODS FOR CROP PROTECTION- II (2+1)

Review of linear correlation and regression, Fitting of linear and exponential regression equation, Multiple regression and correlation, non linear regression, Direct assay investigation of dose response relationship, parallel line assay, slope ratio assay, choice of doses and efficiency in direct assay designs suitable for bio-assay. Indirect assay based on quantal response, probit, logit and angular transformations and percentage response. bacteriological sampling in dilution series, other methods of estimation of median effective dose.

## AG. STAT. 535 STATISTICAL METHODS FOR CROP PRODUCTION- I (2+1)

Principles of experimental design - replication, randomization and local control, plot size and shape, border effects, shape and size of plots and blocks, estimation of size of experiments for specified accuracy. Analysis of variance I: One way classification, Completely randomized design, lsd and DNMRT test. Analysis of variance II Multi way classification - randomized complete block design, Control vs Rest analysis, Latin square design, efficiency, missing values, Transformations. Concept of factorial experiment, Split plot design - over space and time, efficiency, missing values. Strip plot design. Experiments on perennial crops. Planning of experiments on cultivators' fields. Choice of treatments.

## AG. STAT. 536 STATISTICAL METHODS FOR CROP PRODUCTION- II (2+1)

Analysis of Factorial experiments  $2^2$ ,  $3^2$ ,  $3^3$  - single degree of freedom comparison. Response curve. Confounding in  $2^n$ ,  $3^2$ , and  $3^3$  experiments - complete and partial confounding. Pooled analysis, Long term experiments, direct, residual and cumulative effects. Covariance analysis for simple and factorial experiments. Multiple regression and correlation, non linear regression, Covariance analysis for simple and factorial experiments. the method of fitting constant,

### AG. STAT. 537 STATISTICAL METHODS FOR SOCIAL SCIENCES- I (2+1)

Scope of statistics for social science research, frequency distribution and statistical measures. Concept of sampling, simple random sampling, choice of strata, stratified random sampling, sampling with probability proportional to size, sampling and non-sampling errors. Parametric test, t, Z and F. Non-parametric test Sign-test, Wilcoxon matched pairs, Signed rank test, Mann-Whitney U test, Wald-Wolfowitz run test, Median test. Correlation, Rank correlation, Regression analysis, Introduction to Factor analysis and Path analysis. Chi-square test for homogeneity, independence and goodness of fit. Analysis of time series data. Index numbers, moving averages.

## AG. STAT. 538 STATISTICAL METHODS FOR SOCIAL SCIENCES -II (2+1)

Multiple regression and correlation, non linear regression, Regression diagnostics. Selection of variables. Adequacy of models. Application of

multivariate analysis. Probability sampling, Sampling distribution, Simple random sampling. Estimation of proportions, confidence interval, determination of sample size, inverse sampling. Sampling with varying probabilities with replacement. Stratified sampling. Ratio and regression methods of estimation. Cluster sampling. Multi - stage sampling. Self weighting designs. Systematic sampling.

## AG. STAT. 539 STATISTICAL METHODS FOR CROP IMPROVEMENT (2+1)

Principles of experimental design - replication, randomization and local control, One way and two way classification - CRD, RBD and LSD, missing values, Transformations, Control vs Rest analysis. Covariance analysis for simple and factorial experiments. Statistical models, expected mean squares, test of significance. Progeny row trial, Compact family block designs. Introduction to incomplete block design, Analysis of Balanced block designs with and without recovery of inter block information. Partially balanced incomplete block designs. Lattice design. Augmented design, Introduction to path analysis.

## AG. STAT. 540 STATISTICAL GENETICS-II (2+1)

Genetic drift, Genetic load. Effect of finite population size. Effect of linkage, epitasis and inbreeding on quantitative characters. Multiple alelism in continuous variation. Maternal effects. Genotype x environment interaction—its role in analysis of yield stability, estimation of various stability measures. Out breeding and crossbreeding in plant and animal experiments. Various mating designs NCD I, II, III including their genetic analysis. Concepts of general and specific combining ability. Diallel, partial diallel and triallel cross. Basis of selection. Response to selection. Combined selection. Selection for several traits. Selection indices. Restricted selection indices. Phenotypic index. Response to selection. Correlated response to selection. Progeny testing and sire evaluation.

### **Practical**

Effect of linkage, epistasis and inbreeding on mean and variance of metric traits. Stability parameters. Mating designs - NCD I, II, III - complete and partial diallel cross experiments, triallel cross experiments. Selection index including phenotypic index, restricted selection index, correlated response to selection, progeny testing and estimation of sire-index.

## AG. STAT. 541 STATISTICAL METHODS FOR ANIMAL SCIENCES (2+1)

Sources of magnitude of errors in experiments with animals, experimental designs and methods of analysis adopted to specific types of animal research - Completely randomized designs, Randomized block design, Latin square design, Factorial experiments and switch over trials, relative efficiency of alternate design. Amount of data required for specified accuracy. Multivariate analysis with special reference to animal science research, LSD and DNMRT tests.

## AG. STAT. 542 AGRICULTURAL STATISTICS (2+1)

Statistics - meaning, definition, aims and importance in agriculture, Overview of measures of central tendency and measure of dispersion, sampling. Test of significance – t, Z, Chi square and F test, Correlation and Regression Analysis, Analysis of variance, Completely Randomized Design (CRD), Randomized Block Design (RBD), Control vs Rest analysis and Factorial experiments in CRD and RBD, Comparison of means lsd.

### 2. Major / Core Courses

for M. Sc. (Statistics / Agricultural Statistics)

### **AG. STAT. 551**

### MATHEMATICAL METHODS – I

3+0

## **Objective**

This course lays the foundation of all other courses of Statistics / Agricultural Statistics discipline by preparing them to understand the importance of mathematical methods in research. The students would be exposed to the basic mathematical tools of real analysis, calculus, differential equations and numerical analysis. This would prepare them to study their main courses that involve knowledge of Mathematics.

### **Theory**

UNIT I

Real Analysis: Convergence and divergence of infinite series, use of comparison tests -D'Alembert's Ratio - test, Cauchy's nth root test, Raabe's test, Kummer's test, Gauss test. Absolute and conditional convergence. Riemann integration, concept of Lebesgue integration, power series, Fourier, Laplace and Laplace -Steiltjes' transformation, multiple integrals.

UNIT II

Calculus: Limit and continuity, differentiation of functions, successive differentiation, partial differentiation, mean value theorems, Taylor and Maclaurin's series. Application of derivatives, L'hospital's rule. Integration of rational, irrational and trigonometric functions. Application of integration.

**UNIT III** 

Differential equation: Differential equations of first order, linear differential equations of higher order with constant coefficient.

**UNIT IV** 

Numerical Analysis: Simple interpolation, Divided differences, Numerical differentiation and integration.

## AG. STAT. 552 MATHEMATICAL METHODS – II

## **Objective**

This is another course that supports all other courses in Statistics / Agricultural Statistics. The students would be exposed to the advances in Linear Algebra and Matrix theory. This would prepare them to study their main courses that involve knowledge of Linear Algebra and Matrix Algebra.

## **Theory**

#### UNIT I

Linear Algebra: Group, ring, field and vector spaces, Sub-spaces, basis, Gram Schmidt's orthogonalization, Galois field - Fermat's theorem and primitive elements. Linear transformations. Graph theory: Concepts and applications UNIT II

Matrix Algebra: Basic terminology, linear independence and dependence of vectors. Row and column spaces, Echelon form. Determinants, rank and inverse of matrices. Special matrices – idempotent, symmetric, orthogonal. Eigen values and eigen vectors. Spectral decomposition of matrices

**UNIT III** 

Unitary, Similar, Hadamard, Circulant, Helmert's matrices. Kronecker and Hadamard product of matrices, Kronecker sum of matrices. Sub-matrices and partitioned matrices, Permutation matrices, full rank factorization, Grammian root of a symmetric matrix. Solutions of linear equations, Equations having many solutions.

**UNIT IV** 

Generalized inverses, Moore-Penrose inverse, Applications of g-inverse. Spectral decomposition of matrices, Inverse and Generalized inverse of partitioned matrices, Differentiation and integration of matrices, Quadratic forms.

## **Suggested Readings**

Graybill FE.1961. *Introduction to Matrices with Applications in Statistics*. Wadsworth Publ.

Hadley G. 1969. Linear Algebra . Addison Wesley.

Harville DA. 1997. *Matrix Algebra from a Statistician's Perspective* . Springer.

Rao CR. 1965. *Linear Statistical Inference and its Applications* . 2<sup>nd</sup> Ed.John Wilev.

Robinson DJS. 1991. *A Course in Linear Algebra with Applications* . World Scientific.

Searle SR. 1982. *Matrix Algebra Useful for Statistics*. John Wiley.

Seber GAF. 2008. A Matrix Handbook for Statisticians. John Wiley.

## AG. STAT. 560 PROBABILITY THEORY 2+0

### **Objective**

This is a fundamental course in Statistics. This course lays the foundation of probability theory, random variable, probability distribution, mathematical expectation, etc. which forms the basis of basic statistics. The students are also

exposed to law of large numbers and central limit theorem. The students also get introduced to stochastic processes.

## Theory

## UNIT I

Basic concepts of probability. Elements of measure theory: class of sets, field, sigma field, minimal sigma field, Borel sigma field in R, measure, probability measure. Axiomatic approach to probability. Properties of probability based on axiomatic definition. Addition and multiplication theorems. Conditional probability and independence of events. Bayes theorem.

#### UNIT II

Random variables: definition of random variable, discrete and continuous, functions of random variables. Probability mass function and Probability density function, Distribution function and its properties. Notion of bivariate random variables, bivariate distribution function and its properties. Joint, marginal and conditional distributions. Independence of random variables. Transformation of random variables (two dimensional case only).

Mathematical expectation: Mathematical expectation of functions of a random variable. Raw and central moments and their relation, covariance, skewness and kurtosis. Addition and multiplication theorems of expectation. Definition of moment generating function, cumulating

generating function, probability generating function and statements of their properties.

## UNIT III

Conditional expectation and conditional variance. Characteristic function and its properties. Inversion and uniqueness theorems. Functions, which cannot be characteristic functions.

Chebyshev, Markov, Cauchy-Schwartz, Jenson, Liapounov, holder's and Minkowsky's inequalities. Sequence of random variables and modes of convergence (convergence in distribution, in probability, almost surely, and quadratic mean) and their interrelations. Statement of Slutsky's theorem. Borel –Cantelli lemma and Borel 0-1 law.

### **UNIT IV**

Laws of large numbers: WLLN, Bernoulli and Kintchin's WLLN. Kolmogorov inequality, Kolmogorov's SLLNs. Central Limit theorems: Demoviere-Laplace CLT, Lindberg – Levy CLT, Liapounov CLT, Statement of Lindeberg-Feller CLT and simple applications. Definition of quantiles and statement of asymptotic distribution of sample quantiles.

### UNIT V

Classification of Stochastic Processes, Examples. Markov Chain and classification of states of Markov Chain.

## **Suggested Readings**

Rohatgi VK & Saleh AK Md. E. 2005. *An Introduction to Probability and Statistics* . 2<sup>nd</sup> Ed. John Wiley.

### **AG. STAT. 561**

### STATISTICAL METHODS

2+1

## **Objective**

This course lays the foundation of probability distributions and sampling distributions and their application which forms the basis of Statistical Inference. Together with probability theory, this course is fundamental to the discipline of Statistics. The students are also exposed to correlation and regression, and order statistics and their distributions. Categorical data analysis is also covered in this course.

## Theory

### UNIT I

Descriptive statistics: probability distributions: Discrete probability distributions ~ Bernoulli, Binomial, Poisson, Negative-binomial, Geometric and Hyper Geometric, uniform, multinomial ~ Properties of these distributions and real life examples. Continuous probability distributions ~ rectangular, exponential, Cauchy, normal, gamma, beta of two kinds, Weibull, lognormal, logistic, Pareto. Properties of these distributions. Probability distributions of functions of random variables.

### UNIT II

Concepts of compound, truncated and mixture distributions (definitions and examples). Pearsonian curves and its various types. Sampling distributions of sample mean and sample variance from Normal population, central and noncentral chi-Square, t and F distributions, their properties and inter relationships.

## **UNIT III**

Concepts of random vectors, moments and their distributions. Bivariate Normal distribution - marginal and conditional distributions. Distribution of quadratic forms. Cochran theorem. Correlation, rank correlation, correlation ratio and intra-class correlation. Regression analysis, partial and multiple correlation and regression.

### **UNIT IV**

Sampling distribution of correlation coefficient, regression coefficient, correlation ratio, intra class correlation coefficient. Categorical data analysis loglinear models, Association between attributes. Variance Stabilizing Transformations.

#### **UNIT V**

Order statistics, distribution of r-th order statistics, joint distribution of several order statistics and their functions, marginal distributions of order statistics, distribution of range, median, etc.

## **Practical**

Fitting of discrete distributions and test for goodness of fit; Fitting of continuous distributions and test for goodness of fit; Fitting of truncated distribution; Computation of simple, multiple and partial correlation coefficient, correlation ratio and intra-class correlation; Regression coefficients and regression equations; Fitting of Pearsonian curves; Analysis of association between attributes, categorical data and log-linear models.

## **Suggested Readings**

Marek F. 1963. *Probability Theory and Mathematical Statistics*. John Wiley. Rao CR. 1965. *Linear Statistical Inference and its Applications*. John Wiley. Rohatgi VK & Saleh AK Md. E. 2005. *An Introduction to Probability and Statistics*. 2<sup>nd</sup> Ed. John Wiley.

#### AG. STAT. 562

#### STATISTICAL INFERENCE

2+1

## **Objective**

This course lays the foundation of Statistical Inference. The students would be taught the problems related to point and confidence interval estimation and testing of hypothesis. They would also be given the concepts of nonparametric and sequential test procedures and elements of decision theory.

## **Theory**

#### UNIT I

Concepts of point estimation: MSE, unbiasedness, consistency, efficiency and sufficiency. Statement of Neyman's Factorization theorem with applications. MVUE, Rao-Blackwell theorem, completeness, Lehmann-Scheffe theorem. Fisher information, Cramer-Rao lower bound and its applications.

## UNIT II

Moments, minimum chi-square, least square and maximum likelihood methods of estimation and statements of their properties. Interval estimation-Confidence level, CI using pivots and shortest length CI. CI for the parameters of Normal, Exponential, Binomial and Poisson distributions.

### **UNIT III**

Fundamental notions of hypothesis testing-statistical hypothesis, statistical test, critical region, types of errors, test function, randomized and non-randomized tests, level of significance, power function, most powerful tests: Neyman-Pearson fundamental lemma, MLR families and UMP tests for one parameter exponential families. Concepts of consistency, unbiasedness and invariance of tests. Likelihood Ratio tests, statement of asymptotic properties of LR tests with applications (including homogeneity of means and variances). Relation between confidence interval estimation and testing of hypothesis.

### **UNIT IV**

Notions of sequential vs fixed sample size techniques. Wald's SPRT for testing simple null hypothesis vs simple alternative. Termination property of SPRT, SPRT for Binomial, Poisson, Normal and Exponential distributions. Concepts of loss, risk and decision functions, admissible and optimal decision functions, estimation and testing viewed as decision problems, conjugate families, Bayes and Minimax decision functions with applications to estimation with quadratic

loss.

**UNIT V** 

Non-parametric tests: Sign test, Wilcoxon signed rank test, Runs test for randomness, Kolmogorov – Smirnov test for goodness of fit, Median test and Wilcoxon-Mann-Whitney U-test. Chi-square test for goodness of fit and test for independence of attributes. Kruskal –Wallis and Friedman's tests. Spearman's rank correlation and Kendall's Tau tests for independence.

#### **Practical**

Methods of estimation - Maximum Likelihood, Minimum  $\chi^2$  and Moments; Confidence Interval Estimation; MP and UMP tests; Large Sample tests; Non-parametric tests, Sequential Probability Ratio Test; Decision functions.

## **AG. STAT. 563**

## **MULTIVARIATE ANALYSIS**

2+1

## **Objective**

This course lays the foundation of Multivariate data analysis. Most of the data sets in agricultural sciences are multivariate in nature. The exposure provided to multivariate data structure, multinomial and multivariate normal distribution, estimation and testing of parameters, various data reduction methods would help the students in having a better understanding of agricultural research data, its presentation and analysis.

## **Theory**

## UNIT I

Concept of random vector, its expectation and Variance-Covariance matrix. Marginal and joint distributions. Conditional distributions and Independence

of random vectors. Multinomial distribution. Multivariate Normal distribution, marginal and conditional distributions. Sample mean vector and its distribution. Maximum likelihood estimates of mean vector and dispersion matrix. Tests of hypothesis about mean vector.

### **UNIT II**

Wishart distribution and its simple properties. Hotelling's  $T^2$  and Mahalanobis  $D^2$  statistics. Null distribution of Hotelling's  $T^2$ . Rao's U statistics and its distribution. Wilks' criterion and statement of its properties. Concepts of discriminant analysis, computation of linear discriminant function, classification between k ( $k \ge 2$ ) multivariate normal populations based on LDF and Mahalanobis  $D^2$ .

#### **UNIT III**

Principal Component Analysis, factor analysis (simple and multi factor models). Canonical variables and canonical correlations. Cluster analysis, similarities and dissimilarities, Hierarchical clustering. Single and Complete linkage methods.

### **UNIT IV**

Path analysis and computation of path coefficients, introduction to multidimensional scaling, some theoretical results, similarities, metric and non metric scaling methods. Concepts of analysis of categorical data.

### **Practical**

Maximum likelihood estimates of mean-vector and dispersion matrix; Testing of hypothesis on mean vectors of multivariate normal populations; Cluster analysis, Discriminant function, Canonical correlation, Principal component analysis, Factor analysis; Multivariate analysis of variance and covariance, multidimensional scaling.

## AG. STAT. 564

## **DESIGN OF EXPERIMENTS**

2+1

### **Objective**

Design of Experiments provides the statistical tools to get maximum information from least amount of resources. This course is meant to expose the students to the basic principles of design of experiments. The students would also be provided with mathematical background of various basic designs involving one-way and two way elimination of heterogeneity and their

characterization properties. This course would also prepare the students in deriving the expressions for analysis of experimental data.

## Theory

### UNIT I

Elements of linear estimation, Gauss Markoff Theorem, relationship between BLUEs and linear zero-functions. Aitken's transformation, test of hypothesis, analysis of variance, partitioning of degrees of freedom.

### UNIT II

Orthogonality, contrasts, mutually orthogonal contrasts, analysis of covariance; Basic principles of design of experiments, uniformity trials, size and shape of plots and blocks.

### **UNIT III**

Basic designs - completely randomized design, randomized complete block design and Latin square design; orthogonal Latin squares, mutually orthogonal Latin squares (MOLS), Youden square designs, Graeco Latin squares.

#### **UNIT IV**

Balanced incomplete block (BIB) designs – general properties and analysis without and with recovery of intra block information, construction of BIB designs. Partially balanced incomplete block designs with two associate classes - properties, analysis and construction, Lattice designs, alpha designs, cyclic designs, augmented designs, general analysis of block designs.

#### UNIT V

Factorial experiments, confounding in symmetr ical factorial experiments (2<sup>n</sup> and 3<sup>n</sup> series), partial and total confounding, fractional factorials, asymmetrical factorials.

#### UNIT VI

Designs for fitting response surface; Cross-over designs. Missing plot technique; Split plot and Strip plot design; Groups of experiments; Sampling in field experiments.

## **Practical**

Determination of size and shape of plots and blocks from uniformity trials data; Analysis of data generated from completely randomized design, randomized complete block design; Latin square design, Youden square design; Analysis of data generated from a BIB design, lattice design, PBIB designs; 2<sup>n</sup>, 3<sup>n</sup> factorial experiments without and with confounding; Split and strip plot designs, repeated measurement design; Missing plot techniques, Analysis of covariance; Analysis of Groups of experiments, Analysis of clinical trial experiments. Sampling in field experiments.

## **AG. STAT. 565**

## **SAMPLING TECHNIQUES**

2+1

## **Objective**

This course is meant to expose the students to the techniques of drawing representative samples from various populations and then preparing them on the mathematical formulations of estimating the population parameters based on the sample data. The students would also be exposed to the real life applications of sampling techniques and estimation of parameters.

## **Theory**

### UNIT I

Sample survey vs complete survey, probability sampling, sample space, sampling design, sampling strategy; Inverse sampling; Determination of sample size; Confidence-interval; Simple random sampling, Estimation of population proportion, Stratified random sampling, Number of strata and optimum points of stratification.

## UNIT II

Ratio and regression methods of estimation, Cluster sampling, Systematic sampling, Multistage sampling with equal probability, Separate and combined ratio estimator, Double sampling, Successive sampling –two occasions.

### **UNIT III**

Non-sampling errors – sources and classification, Non-response in surveys, Imputation methods, Randomized response techniques, Response errors – interpenetrating sub-sampling.

### **UNIT IV**

Sampling with varying probabilities with and without replacement, PPS sampling, Cumulative method and Lahiri's method of selection, Horvitz-Thompson estimator, Ordered and unordered estimators, Sampling strategies due to Midzuno-Sen and Rao-Hartley-Cochran. Inclusion probability proportional to size sampling, PPS systematic sampling, Multistage sampling with unequal probabilities, Self weighting design PPS sampling.

## UNIT V

Unbiased ratio and regression type estimators, Multivariate ratio and regression type of estimators, Design effect, Bernoulli and Poisson sampling.

#### **Practical**

Determination of sample size and selection of sample; Simple random sampling, Inverse sampling, Stratified random sampling, Cluster sampling, systematic sampling; Ratio and regression methods of estimation; Double sampling, multi-stage sampling, Imputation methods; Randomized response techniques; Sampling with varying probabilities.

### **AG. STAT. 566**

#### STATISTICAL GENETICS - I

2+1

## **Objective**

This course is meant to prepare the students in applications of statistics in quantitative genetics and breeding. The students would be exposed to the physical basis of inheritance, detection and estimation of linkage, estimation of genetic parameters and development of selection indices.

## **Theory**

## UNIT I

Physical basis of inheritance. Analysis of segregation, detection and estimation of linkage for qualitative characters. Amount of information about linkage, combined estimation, disturbed segregation.

#### **UNIT II**

Gene and genotypic frequencies, Random mating and Hardy -Weinberg law, Application and extension of the equilibrium law, Fisher's fundamental theorem of natural selection. Disequilibrium due to linkage for two pairs of genes, sex-linked genes, Theory of path coefficients.

## **UNIT III**

Concepts of inbreeding, Regular system of inbreeding. Forces affecting gene frequency - selection, mutation and migration, equilibrium between forces in large populations, Random genetic drift, Effect of finite population size.

### **UNIT IV**

Polygenic system for quantitative characters, concepts of breeding value and dominance deviation. Genetic variance and its partitioning, Effect of inbreeding on quantitative characters, Multiple allelism in continuous variation, Sex-linked genes, Maternal effects - estimation of their contribution.

#### **UNIT V**

Correlations between relatives, Heritability, Repeatability and Genetic

correlation. Response due to selection, Selection index and its applications in plants and animals improvement programmes, Correlated response to selection.

**UNIT VI** 

Restricted selection index. Variance component approach and linear regression approach for the analysis of GE interactions. Measurement of stability and adaptability for genotypes. Concepts of general and specific combining ability. Diallel and partial diallel crosses - construction and analysis.

### **Practical**

Test for the single factor segregation ratios, homogeneity of the families with regard to single factor segregation; Detection and estimation of linkage parameter by different procedures; Estimation of genotypic and gene frequency from a given data. Hardy-Weinberg law; Estimation of changes in gene frequency due to systematic forces, inbreeding coefficient, genetic components of variation, heritability and repeatability coefficient, genetic correlation coefficient; Examination of effect of linkage, epistasis and inbreeding on mean and variance of metric traits; Mating designs; Construction of selection index including phenotypic index, restricted selection index. Correlated response to selection.

## AG. STAT. 567 REGRESSION ANALYSIS 1+1

## **Objective**

This course is meant to prepare the students in linear and non-linear regression methods useful for statistical data analysis. They would also be provided a mathematical foundation behind these techniques and their applications in agricultural data.

## **Theory**

#### UNIT I

Simple and Multiple linear regressions: Least squares fit, Properties and examples. Polynomial regression: Use of orthogonal polynomials.

#### **UNIT II**

Assumptions of regression; diagnostics and transformations; Examination of residuals ~ Studentized residuals, applications of residuals in detecting outliers, identification of influential observations. Lack of fit, Pure error.

Testing homoscedasticity and normality of errors, Durbin-Watson test. Use of R<sup>2</sup> for examining goodness of fit.

## **UNIT III**

Concepts of Least median of squares and its applications; Concept of multicollinearity, Analysis of multiple regression models, estimation and testing of regression parameters, sub-hypothesis testing, restricted estimation. UNIT IV

Weighted least squares method: Properties, and examples. Box-Cox family of transformations. Use of dummy variables, Selection of variables: Forward selection, Backward elimination. Stepwise and Stagewise regressions.

#### **IINIT V**

Introduction to non-linear models, nonlinear estimation: Least squares for nonlinear models.

### **Practical**

Multiple regression fitting with three and four independent variables; Estimation of residuals, their applications in outlier detection, distribution of residuals; Test of homoscedasticity, and normality, Box-Cox transformation; Restricted estimation of parameters in the model, hypothesis testing, Step wise regression analysis; Least median of squares norm, Orthogonal polynomial fitting.

## **Objective**

This course is meant for exposing the students in the concepts of computational techniques. Various statistical packages would be used for teaching the concepts of computational techniques.

## **Theory**

### UNIT I

Introduction to statistical packages and computing: data types and structures, pattern recognition, classification, association rules, graphical methods. Data analysis principles and practice

UNIT II

ANOVA, regression and categorical data methods; model formulation, fitting, diagnostics and validation; Matrix computations in linear models. Analysis of discrete data.

**UNIT III** 

Numerical linear algebra, numerical optimization, graphical techniques, numerical approximations, numerical integration and Monte Carlo methods.

UNIT IV

Spatial statistics; spatial sampling; hierarchical modeling. Analysis of cohort studies, case-control studies and randomized clinical trials, techniques in the analysis of survival data and longitudinal studies, Approaches to handling missing data, and meta-analysis.

### **Practical**

Data management, Graphical representation of data, Descriptive statistics; General linear models ~ fitting and analysis of residuals, outlier detection; Categorical data analysis, analysis of discrete data, analysis of binary data; Numerical algorithms; Spatial modeling, cohort studies; Clinical trials, analysis of survival data; Handling missing data.

## AG. STAT. 569 TIME SERIES ANALYSIS 1+1

## **Objective**

This course is meant to teach the students the concepts involved in time series data. They would also be exposed to components of time series, stationary models and forecasting/ projecting the future scenarios based on time series data. It would also help them in understanding the concepts involved in time series data presentation, analysis and interpretation.

## **Theory**

UNIT I

Components of a time-series. Autocorrelation and Partial autocorrelation functions, Correlogram and periodogram analysis.

**UNIT II** 

Linear stationary models: Autoregressive, Moving average and Mixed processes. Linear non-stationary models: Autoregressive integrated moving average processes.

UNIT III

Forecasting: Minimum mean square forecasts and their properties, Calculating and updating forecasts.

**UNIT IV** 

Model identification: Objectives, Techniques, and Initial estimates. Model estimation: Likelihood function, Sum of squares function, Least squares estimates. Seasonal models. Intervention analysis models and Outlier detection.

## **Practical**

Time series analysis, autocorrelations, correlogram and periodogram; Linear stationary model; Linear non-stationary model; Model identification and model estimation; Intervention analysis and outliers detection.

## **Suggested Readings**

Shumway RH & Stoffer DS. 2006. *Time Series Analysis and its Applications:* With R Examples . 2<sup>nd</sup> Ed. Springer.

## **Objective**

This course is meant to expose to the students to the statistical techniques such as probability models, life tables, insurance and annuities. The students would also be exposed top practical applications of these techniques in computation of premiums that include expenses, general expenses, types of expenses and per policy expenses.

## **Theory**

#### UNIT I

Insurance and utility theory, models for individual claims and their sums, survival function, curtate future lifetime, force of mortality.

#### **UNIT II**

Life table and its relation with survival function, examples, assumptions for fractional ages, some analytical laws of mortality, select and ultimate tables.

#### **UNIT III**

Multiple life functions, joint life and last survivor status, insurance and annuity benefits through multiple life functions evaluation for special mortality laws. Multiple decrement models, deterministic and random survivorship groups, associated single decrement tables, central rates of multiple decrement, net single premiums and their numerical evaluations.

### **UNIT IV**

Distribution of aggregate claims, compound Poisson distribution and its applications.

### UNIT V

Principles of compound interest: Nominal and effective rates of interest and discount, force of interest and discount, compound interest, accumulation factor, continuous compounding.

### UNIT VI

Insurance payable at the moment of death and at the end of the year of death-level benefit insurance, endowment insurance, deferred insurance and varying benefit insurance, recursions, commutation functions.

## **UNIT VII**

Life annuities: Single payment, continuous life annuities, discrete life annuities, life annuities with monthly payments, commutation functions, varying annuities, recursions, complete annuities-immediate and apportionable annuities-due.

### **UNIT VIII**

Net premiums: Continuous and discrete premiums, true monthly payment premiums, apportionable premiums, commutation functions, accumulation type benefits. Payment premiums, apportionable premiums, commutation functions, accumulation type benefits. Net premium reserves: Continuous and discrete net premium reserve, reserves on a semi-continuous basis, reserves based on true monthly premiums, reserves on an apportionable or

discounted continuous basis, reserves at fractional durations, allocations of loss to policy years, recursive formulas and differential equations for reserves, commutation functions.

### **UNIT IX**

Some practical considerations: Premiums that include expenses-general expenses types of expenses, per policy expenses. Claim amount distributions, approximating the individual model, stop-loss insurance.

### AG. STAT. 571 BIOINFORMATICS

2+0

## **Objective**

Bioinformatics is a new emerging area. It is an integration of Statistics, Computer applications and Biology. The trained manpower in the area of Bioinformatics is required for meeting the new challenges in teaching and research in the discipline of Agricultural Sciences. This course is meant to train the students on concepts of basic biology, statistical techniques and computational techniques for understanding bioinformatics principals.

## **Theory**

#### UNIT I

Basic Biology: Cell, genes, gene structures, gene expression and regulation, Molecular tools, nucleotides, nucleic acids, markers, proteins and enzymes, bioenergetics, single nucleotide polymorphism, expressed sequence tag. Structural and functional genomics: Organization and structure of genomes, genome mapping, assembling of physical maps, strategies and techniques for genome sequencing and analysis.

## UNIT II

Computing techniques: OS and Programming Languages – *Linux*, *perl*, *bioperl*, *cgi*, *MySQL*, *phpMyAdmin*; Coding for browsing biological databases on web, parsing & annotation of genomic sequences; Database designing; Computer networks – Internet, World wide web, Web browsers – EMBnet, NCBI; Databases on public domain pertaining to Nucleic acid sequences, protein sequences, SNPs, etc.; Searching sequence databases, Structural databases.

UNIT III

Statistical Techniques: MANOVA, Cluster analysis, Discriminant analysis, Principal component analysis, Principal coordinate analysis, Multidimensional scaling; Multiple regression analysis; Likelihood approach in estimation and testing; Resampling techniques — Bootstrapping and Jack-knifing; Hidden Markov Models; Bayesian estimation and Gibbs sampling; UNIT IV

Tools for Bioinformatics: DNA Sequence Analysis – Features of DNA sequence analysis, Approaches to EST analysis; Pairwise alignment techniques: Comparing two sequences, PAM and BLOSUM, Global alignment (The Needleman and Wunsch algorithm), Local Alignment (The Smith-Waterman algorithm), Dynamic programming, Pairwise database searching; Sequence analysis – BLAST and other related tools, Multiple alignment and database search using motif models, ClustalW, Phylogeny; Databases on SNPs; EM algorithm and other methods to discover common motifs in biosequences; Gene prediction based on Neural Networks, Genetic algorithms, Hidden Markov models. Computational analysis of protein sequence, structure and function; Design and Analysis of microarray experiments.

AG. STAT. 572 ECONOMETRICS 2+0

## **Objective**

This course is meant for training the students in econometric methods and their applications in agriculture. This course would enable the students in understanding the economic phenomena through statistical tools and economics principles.

## .Theory

UNIT I

Representation of Economic phenomenon, relationship among economic variables, linear and non linear economic models, single equation general linear regression model, basic assumptions, Ordinary least squares method of estimation for simple and multiple regression models; summary statistics correlation matrix, co-efficient of multiple determination, standard errors of estimated parameters, tests of significance and confidence interval estimation. BLUE properties of Least Squares estimates. Chow test, test of improvement of fit through additional regressors. Maximum likelihood estimation.

**UNIT II** 

Heteroscedasticity, Auto-correlation, Durbin Watson test, Multicollinearity. Stochastic regressors, Errors in variables, Use of instrumental variables in regression analysis. Dummy Variables. Distributed Lag models: Koyck's Geometric Lag scheme, Adaptive Expectation and Partial Adjustment Mode, Rational Expectation Models and test for rationality.

**UNIT III** 

Simultaneous equation model: Basic rationale, Consequences of simultaneous relations, Identification problem, Conditions of Identification, Indirect Least Squares, Two-stage least squares, K-class estimators, Limited Information and Full Information Maximum Likelihood Methods, Three stage least squares, Generalized least squares, Recursive models, SURE Models. Mixed Estimation Methods, use of instrumental variables, pooling of cross-section and time series data, Principal Component Methods.

**UNIT IV** 

Problem and Construction of index numbers and their tests; fixed and chain based index numbers; Construction of cost of living index number.

UNIT V

Demand analysis – Demand and Supply Curves; Determination of demand curves from market data. Engel's Law and the Engel's Curves, Income distribution and method of its estimation, Pareto's Curve, Income inequality measures.

## **Objective**

This course is meant for exposing the students to the concepts of Statistical Quality Control and their applications in agribusiness and agro-processing industries. This course would enable the students to have an idea about the statistical techniques used in quality control. students who do not have sufficient background of Statistical Methods.

## **Theory**

UNIT I

Introduction to Statistical Quality Control; Control Charts for Variables – Mean, Standard deviation and Range charts; Statistical basis; Rational subgroups.

UNIT II

Control charts for attributes- 'np', 'p' and 'c' charts.

UNIT III

Fundamental concepts of acceptance, sampling plans, single, double and sequential sampling plans for attributes inspection.

UNIT IV

Sampling inspection tables for selection of single and double sampling plans.

## **Suggested Readings**

Cowden DJ. 1957. Statistical Methods in Quality Control. Prentice Hall of India.

Dodge HF & Romig HG. 1959. Sampling Inspection Tables . John Wiley.

Wetherhil G.B. 1977. Sampling Inspection and Quality Control. Halsted Press.

## AG. STAT. 574 OPTIMIZATION TECHNIQUES

1+1

### **Objective**

This course is meant for exposing the students to the mathematical details of the techniques for obtaining optimum solutions under constraints for desired output. They will be taught numerical methods of optimization, linear programming techniques, non-linear programming and multiple objective programming. Students will also be exposed to practical applications of these techniques.

#### Theory

UNIT I

Classical Optimization Techniques: Necessary Conditions for an Extremum. Constrained Optimization: Lagrange Multipliers, Statistical Applications. Optimization and Inequalities. Classical Inequalities, like Cauchy-Schwarz Inequality, Jensen Inequality and Markov Inequality.

#### UNIT II

Numerical Methods of Optimization: Numerical Evaluation of Roots of Equations, Direct Search Methods, Sequential Search Methods -- Fibonacci Search Method. Random Search Method - Method of Hooke and Jeeves, Simplex Search Method. Gradient Methods, like Newton's Method, and Method of Steepest Ascent. Nonlinear Regression and Other Statistical Algorithms, like Expectation - Maximization Algorithm.

**UNIT III** 

Linear programming Techniques – Simplex Method, Karmarkar's Algorithm, Duality and Sensitivity Analysis. Zero-sum Two-person Finite Games and Linear Programming. Integer Programming. Statistical Applications.

**UNIT IV** 

Nonlinear Programming and its Examples. Kuhn-Tucker Conditions. Quadratic Programming. Convex Programming. Basics of Stochastic Programming. Applications. Elements of Multiple Objective Programming. Dynamic Programming, Optimal Control Theory – Pontryagin's Maximum Principle, Time-Optimal Control Problems.

### **Practical**

Problems based on classical optimization techniques; Problems based on optimization techniques with constraints; Minimization problems using numerical methods; Linear programming (LP) problems through graphical method; LP problem by Simplex method; LP problem using simplex method (Two-phase method); LP problem using primal and dual method; Sensitivity analysis for LP problem; LP problem using Karmarkar's method; Problems based on Quadratic programming; Problems based on Integer programming; Problems based on Pontryagin's Maximum Principle.

### AG. STAT. 575 DEMOGRAPHY 2+0

## **Objective**

This course is meant for training the students in measures of demographic indices, estimation procedures of demographic parameters. Students would also be exposed to population projection techniques and principles involved in bioassays.

## Theory

#### UNIT I

Introduction to vital statistics, crude and standard mortality and morbidity rates, Estimation of mortality, Measures of fertility and mortality, period and cohort measures.

#### UNIT II

Life tables and their applications, methods of construction of abridged life tables, Increment-Decrement Life Tables.

#### **UNIT III**

Stationary and stable populations, Migration and immigration. Application of stable population theory to estimate vital rates, migration and its estimation. Demographic relations in Nonstable populations. Measurement of population growth, Lotka's model (deterministic) and intrinsic rate of growth, Measures of mortality and morbidity, Period and

**UNIT IV** 

Principle of biological assays, parallel line and slope ratio assays, choice of doses and efficiency in assays quantal responses, probit and logit transformations, epidemiological models.

## **Suggested Readings**

### AG. STAT. 576 STATISTICAL METHODS FOR LIFE SCIENCES 2+0

### **Objective**

This course focuses on statistical methods for discrete data collected in public health, clinical and biological studies including survival analysis. This would enable the students to understand the principles of different statistical techniques useful in public health and clinical studies conducted.

### **Theory**

UNIT I

Proportions and counts, contingency tables, logistic regression models, Poisson regression and log-linear models, models for polytomous data and generalized linear models.

**UNIT II** 

Computing techniques, numerical methods, simulation and general implementation of biostatistical analysis techniques with emphasis on data applications. Analysis of survival time data using parametric and non-parametric models, hypothesis testing, and methods for analyzing censored (partially observed) data with covariates. Topics include marginal estimation of a survival function, estimation of a generalized multivariate linear regression model (allowing missing covariates and/or outcomes).

UNIT III

Proportional Hazard model: Methods of estimation, estimation of survival functions, time-dependent covariates, estimation of a multiplicative intensity model (such as Cox proportional hazards model) and estimation of causal parameters assuming marginal structural models.

### **UNIT IV**

General theory for developing locally efficient estimators of the parameters of interest in censored data models. Rank tests with censored data. Computing techniques, numerical methods, simulation and general implementation of biostatistical analysis techniques with emphasis on data applications.

### **UNIT V**

Newton, scoring, and EM algorithms for maximization; smoothing methods; bootstrapping; trees and neural networks; clustering; isotonic regression; Markov chain Monte Carlo methods.

## **Suggested Readings**

## AG. STAT. 577

## STATISTICAL ECOLOGY

2+0

### **Objective**

This course is meant for exposing the students to the importance and use of statistical methods in collections of ecological data, species-abundance relations, community classification and community interpretation.

## **Theory**

UNIT I

Ecological data, Ecological sampling; Spatial pattern analysis: Distribution methods, Quadrant-variance methods, Distance methods.

UNIT II

Species-abundance relations: Distribution models, Diversity indices; Species affinity: Niche-overlap indices, interspecific association, interspecific covariation.

**UNIT III** 

Community classification: Resemblance functions, Association analysis, Cluster analysis; Community Ordination: Polar Ordination, Principal Component Analysis, Correspondence analysis, Nonlinear ordination.

**UNIT IV** 

Community interpretation: Classification Interpretation and Ordination

Interpretation.

## AG.STAT. 578 COMPUTER FUNDAMENTALS AND PROGRAMMING 2+1

## **Objective**

This course builds an understanding of the structure of computers and how they execute programs, data representation and computer arithmetic. The course is also aimed to develop problem-solving strategies, techniques and skills to help students develop the logic, ability to solve the problems efficiently using C programming.

## **Theory**

### UNIT I

Introduction to Computers Definition of computer, its characteristics and uses. Classifications of computers, Number systems-decimal, octal, binary and hexadecimal. Representation of integers, fixed and floating point numbers, character representation-ASCII, EBCDIC, UNICODE.

**UNIT II** 

Basic components of a computer: Central Processing Unit (CPU)- the control unit, arithmetic logic unit and register. Primary & secondary memories, Input and Output units, Operating system (OS) functions

**UNIT III** 

Computer algorithms, Programming in C-Building blocks, Control structures, Arrays, Pointers, Dynamic memory allocation, File management. Over view of Data Structures, Linked List. Representation of integer, character, real, data types; Constants and variables; Arithmetic expressions, assignment statement, logical expression.

**UNIT IV** 

Object Oriented Programming-Encapsulation, Inheritance, Polymorphism with C++/JAVA

#### **Practical**

Conversion of different number types; Creation of flow chart, conversion of algorithm/flowchart to program; Mathematical operators, operator precedence; Sequence, control and iteration; Arrays and string processing; Pointers and File processing.

## **Suggested Readings**

Mano MM. 1999. Digital Logic and Computer Design . Prentice Hall of India.

# AG. STAT. 579 INTRODUCTION TO NETWORKING AND INTERNET 1+1 APPLICATIONS

## **Objective**

The course is aimed to provide fundamentals of networking and application protocols with the emphasis on developing web based applications.

## **Theory**

UNIT I

Networking fundamentals, types of networking, network topology; network operating system, Introduction to File Transfer Protocol (FTP), Telnet, Simple Mail Transfer Protocol (SMTP).

UNIT II

World Wide Web (WWW), working with Internet; Hyper Text Markup Language (HTML), Building static and dynamic web pages, Client side and server side scripting Web pages, web sites, web servers; Web Applications.

**UNIT III** 

Internet standards and services, Cryptography, Data compression, Authentication and Firewalls

#### **Practical**

Network and mail configuration; Using Network Services; Browsing of Internet; Creation of web pages; Creation of websites using HTML and Creation of websites using DHTML.

### **Suggested Readings**

Buyens J. 2002. Microsoft FrontPage -Inside Out. Microsoft Press.

Cox V, Wermers L & Reding EE. 2006. *HTML Illustrated Complete* . 3<sup>rd</sup> Ed. Course Technology.

### STAT 601 ADVANCED STATISTICAL COMPUTING

## **Objective**

This is an advanced course in Statistical Computing that aims at describing some advanced level topics in this area of research with a very strong potential of applications. This course also prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to agricultural sciences and use of statistical packages.

2+1

## **Theory**

### UNIT I

Measures of association. Structural models for discrete data in two or more dimensions. Estimation in complete tables. Goodness of fit, choice of a model. Generalized Linear Model for discrete data, Poisson and Logistic regression models. Log-linear models.

#### UNIT II

Elements of inference for cross-classification tables. Models for nominal and ordinal response.

#### **UNIT III**

Computational problems and techniques for robust linear regression, nonlinear and generalized linear regression problem, tree-structured regression and classification, cluster analysis, smoothing and function estimation, robust multivariate analysis.

### **UNIT IV**

Analysis of incomplete data: EM algorithm, single and multiple imputations. Markov Chain, Monte Carlo and annealing techniques, Neural Networks, Association Rules and learning algorithms.

### UNIT V

Linear mixed effects models, generalized linear models for correlated data (including generalized estimating equations), computational issues and methods for fitting models, and dropout or other missing data.

## **UNIT VI**

Multivariate tests of linear hypotheses, multiple comparisons, confidence regions, prediction intervals, statistical power, transformations and diagnostics, growth curve models, dose-response models.

#### **Practical**

Analysis of qualitative data; Generalized linear for correlated data; Generalized linear models for discrete data; Robust methods of estimation and testing of non-normal data; Robust multivariate analysis; Cluster analysis; Analysis of Incomplete data; Classification and prediction using artificial neural networks; Markov Chain; Analysis of data having random effects using Linear mixed effects models; Analysis of data with missing observations; Applications of multiple comparison procedures; Building Simultaneous confidence intervals; Fitting of growth curve models to growth data; Fitting of dose-response curves and estimation of parameters.

## AG. STAT. 602 SIMULATION TECHNIQUES

1+1

## **Objective**

This course is meant for students who have a good knowledge in Statistical Inference and Statistical Computing. This course would prepare students for undertaking research in the area of simulation techniques and their applications to agricultural sciences.

## **Theory**

UNIT I

Review of simulation methods; Implementation of simulation methods - for various probability models, and resampling methods: theory and application of the jackknife and the bootstrap.

**UNIT II** 

Randomization tests, analysis using computer software packages. Simulating multivariate distributions, MCMC methods and Gibbs sampler.

**UNIT III** 

Correlograms, periodograms, fast Fourier transforms, power spectra, cross-spectra, coherences, ARMA and transfer-function models, spectral-domain regression. Simulated data sets to be analyzed using popular computer software packages

**UNIT IV** 

Stochastic simulation: Markov Chain, Monte Carlo, Gibbs' sampling, Hastings-Metropolis algorithms, critical slowing-down and remedies, auxiliary variables, simulated tempering, reversible- jump MCMC and multi-grid methods.

#### **Practical**

Simulation from various probability models; Resampling methods, jackknife and the bootstrap; Randomization tests; Simulating multivariate distributions, MCMC methods and Gibbs sampler; Correlograms, periodograms, fast Fourier

transforms, power spectra, cross-spectra, coherences; ARMA and transferfunction models, spectral-domain regression; Simulated data sets to be analyzed using popular computer software packages; Markov Chain, Monte Carlo, Gibbs' sampling; Reversible-jump MCMC and multi-grid methods.

## AG. STAT. 611 ADVANCED STATISTICAL METHODS

2+0

### **Objective**

This is an advanced course in Statistical Methods that aims at describing some advanced level topics in this area of research with a very strong potential of applications. This course also prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to agricultural sciences.

## **Theory**

UNIT I

Ridge regression: Basic form, Use as a selection procedure. Robust regression: Least absolute deviations regression, M-estimators, Least median of squares regression. Nonparametric regression.

**UNIT II** 

Introduction to the theory and applications of generalized linear models, fixed effects, random effects and mixed effects models, estimation of variance components from unbalanced data. Unified theory of least -squares, MINQUE, MIVOUE, REML.

UNIT III

Quasi-likelihoods, and generalized estimating equations - logistic regression, over-dispersion, Poisson regression, log-linear models, conditional likelihoods, generalized mixed models, and regression diagnostics. Theory of statistical methods for analyzing categorical data by means of linear models; multifactor and multi-response situations; interpretation of interactions.

### **UNIT IV**

Fitting of a generalized linear model, mixed model and variance components estimation, MINQUE, MIVQUE, REML.

#### UNIT V

Fitting of Logistic regression, Poisson regression, ridge regression, robust regression, non-parametric regression.

## **Suggested Readings**

Searle SR. 1971. Linear Models . John Wiley.

### AG. STAT. 612 ADVANCED STATISTICAL INFERENCE 3+0

## **Objective**

This course aims at describing the advanced level topics in statistical methods and statistical inference. This course would prepare students to have a strong base in basic statistics that would help them in undertake basic and applied research in Statistics.

## **Theory**

## UNIT I

Robust estimation and robust tests, Robustness, M-estimates. L-estimates, asymptotic techniques, Bayesian inference. Detection and handling of outliers in statistical data.

#### **UNIT II**

Loglinear models, saturated models, hierarchical models, Analysis of multi-dimensional contingency tables. Non-parametric maximum likelihood estimation.

#### **UNIT III**

Density Estimation: Density Estimation in the Exploration and Presentation of Data. Survey of existing methods. The Kernel method for Univariate Data: Rosenblatts naïve estimator, its bias and variance. Consistency of general Kernel estimators, MSE and IMSE. Asymptotic normality of Kernel estimates of density. Estimation of distribution by method of kernels.

## **UNIT IV**

Consistency and asymptotic normality (CAN) of real and vector parameters. Invariance of consistency under continuous transformation. Invariance of CAN estimators under differentiable transformations, generation of CAN estimators using central limit theorem. Exponential class of densities and multinomial distribution, Cramer-Huzurbazar theorem, method of scoring.

#### UNIT V

Efficiency: asymptotic relative efficiency and Pitman's theorem. Concepts and examples of Bahadur efficiency and Hodges-Lehmanns efficiency with examples. The concepts of Rao's second order efficiency and Hodges-Lehmann's Deficiency with examples. Rank tests, permutation tests, asymptotic theory of rank tests under null and alternative (contiguous) hypotheses.

#### **UNIT VI**

Inference on Markov Chains: Maximum likelihood estimation and testing of Transition Probability Matrix of a Markov Chain, testing for order of a Markov chain, estimation of functions of transition probabilities.

### **UNIT VII**

Concept of loss, risk and decision functions, admissible and optimal decision functions, a-priori and posteriori distributions, conjugate families. Bayes and Minimax decision rules and some basic results on them. Estimation and testing viewed as cases of decision problems. Bayes and Minimax decision functions with applications to estimation with quadratic loss function. Concept of Bayesian sequential analysis. Bayes sequential decision rule. The SPRT as a Bayes procedure. Minimax sequential procedure.

### **UNIT VIII**

U-Statistics: definitions of estimable parametric function, kernel, symmetric kernel and U-statistics. Variance and covariance of U-statistics. Hoeffding's decomposition of U-statistics —examples. U-statistics based on sampling from finite populations and weighted U-statistics with examples. Some convergence results on U-statistics. Asymptotic normality of U-statistics with examples.

#### **UNIT IX**

Resampling Plans: Estimation of standard and biased deviation of point estimator by the Jackknife, the Bootstrap, the Infinitesimal Jackknife, the Delta and the Influence function methods. Estimation of excess error in regression by cross validation, the Jackknife and Bootstrap methods. Nonparametric confidence interval for the median by the Percentile method.

### AG. STAT. 613 ADVANCED DESIGN OF EXPERIMENTS 2+0

## **Objective**

This is an advanced course in Design of Experiments that aims at describing some advanced level topics for students who wish to pursue research in Design of Experiments. This course prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to agricultural sciences.

## **Theory**

#### UNIT I

General properties and analysis of block designs. Balancing criteria. *m*-associate PBIB designs, and their association schemes including lattice designs - properties and construction, Designs for test treatment – control(s) comparisons; Nested block designs, Mating designs.

### UNIT II

General properties and analysis of two-way heterogeneity designs, Youden type designs, generalized Youden designs, Pseudo Youden designs. Structurally Incomplete block designs, Designs for two sets of treatments.

### **UNIT III**

Balanced factorial experiments - characterization and analysis (symmetrical and asymmetrical factorials). Factorial experiments with extra treatment(s). Orthogonal arrays, Mixed orthogonal arrays, balanced arrays, Fractional replication, Regular and irregular fractions.

### **UNIT IV**

Response surface designs - Symmetrical and asymmetrical factorials, Response optimization and slope estimation, Blocking. Canonical analysis and ridge analysis. Experiments with mixtures: design and analysis. Experiments with qualitative cum quantitative factors.

### UNIT V

Optimality criteria and optimality of designs, robustness of designs against loss of data, outliers, etc. Diagnostics in design of experiments.

## AG. STAT. 614 ADVANCED SAMPLING TECHNIQUES 2+0

## **Objective**

This is an advanced course in Sampling Techniques that aims at describing some advanced level topics for students who wish to pursue research in Sampling Techniques. This course prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to Statistical System in the country.

## **Theory**

#### UNIT I

Controlled selection. Two way stratification, collapsed strata. Systematic sampling in two dimensions. Use of combinatorics in controlled selection. Integration of surveys - Lahiri and Keyfitz's procedures.

## UNIT II

Variance estimation in complex surveys. Taylor's series linearisation, balanced repeated replication, Jackknife and bootstrap methods.

## UNIT III

Unified theory of sampling from finite populations. UMV - Non-existence theorem and existence theorem under restricted conditions. Concept of sufficiency and likelihood in survey sampling. Admissibility and hyperadmissibility.

### **UNIT IV**

Inference under super population models - concept of designs and model unbiasedness, prediction approach. Regression analysis and categorical data analysis with data from complex surveys. Domain estimation. Small area estimation.

## UNIT V

Stochastic parameter models, Bayes' linear predictor, Bayesian models with multi-stage sampling. Measurement error and small area estimation, Time series approach in survey sampling. Dynamic Bayesian prediction, Kalman filter, Empirical and Hierarchical Bayes predictors, Robust linear prediction, Bayesian robustness.

## **Suggested Readings**

#### AG. STAT. 615 ADVANCED STATISTICAL GENETICS (2+0)

#### **Objective**

This is an advanced course in Statistical Genetics that aims at describing some advanced level topics for students who wish to pursue research in Statistical Genetics. This course prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject in plant and animal breeding.

#### **Theory**

#### UNIT I

Genotype x environment interactions estimation of their contributions, non linear regression method for genotype x environment interactions. Nonparametric methods of stability analysis, AMMI Model for GxE interaction, clustering based on G x E, triallele and diallele method Restricted selection indices, combined selection with auxiliary traits. Partial diallel crosses (PDC) based on PBIB designs, and partial circulant structure, augmented PDCs. Optimal plans for PDCs. Triallel crosses, Double crosses. Mahalnobis D square analysis.

#### **UNIT II**

Methods of path co-efficient, Distribution of time until fixation, random fluctuations in selection intensity, stationary distribution of gene frequency. Effective population size.

#### UNIT III

Best linear unbiased prediction, Newer reproductive technology and its effect in genetic evaluation of individual merit. Estimation of genetic parameters - problems relating to computational aspects of genetic variance components, parameter estimation in variance component models for binary response data. UNIT IV

Identification of genes with large effects, Use of molecular markers (RFLP, PCR-AFLP, RAPD and SSR), Gene mapping and Quantitative trait loci. Molecular manipulation for genetic variability.

#### STATISTICAL MODELING

1+1

#### **Objective**

This is an advanced course in Statistical Methods that aims at describing some advanced level topics in this area of research with a very strong potential of applications. This course also prepares students for undertaking research in the area of empirical and mechanistic models and nonlinear estimation and the replications in different disciplines of agricultural sciences.

#### **Theory**

#### UNIT I

Empirical and mechanistic models. Nonlinear growth models like monomolecular, logistic, Gompertz, Richards. Applications in agriculture and fisheries.

UNIT II

Nonlinear estimation: Least squares for nonlinear models, Methods for estimation of parameters like Linearization, Steepest, and Levenberg-Marquardt's Reparameterization.

**UNIT III** 

Two-species systems. Lotka-Volterra, Leslie-Gower and Holling-Tanner non-linear prey-predator models. Volterra's principle and its applications. Gause competition model.

**UNIT IV** 

Compartmental modelling - First and second order input-output systems, Dynamics of a multivariable system.

#### **Practical**

Fitting of mechanistic non-linear models; Application of Schaefer and Fox non-linear models; Fitting of compartmental models.

#### **Suggested Readings**

Draper NR & Smith H. 1998. *Applied Regression Analysis* . 3<sup>rd</sup> Ed. John Wiley.

Efromovich S. 1999. Nonparametric Curve Estimation . Springer.

#### AG. STAT. 617 ADVANCED TIME SERIES ANALYSIS

2+0

#### **Objective**

This is an advanced course in Time Series Analysis that aims at describing some advanced level topics in this area of research with a very strong potential of applications. This course also prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to agricultural sciences.

#### **Theory**

#### UNIT I

Multivariate time series: modelling the mean, stationary VAR models: properties, estimation, analysis and forecasting, VAR models with elements of nonlinearity, Non-stationary multivariate time series: spurious regression, cointegration, common trends.

#### **UNIT II**

Volatility: Modelling the variance, The class of ARCH models: properties, estimation, analysis and forecasting, stochastic volatility, realized volatility, Extensions: IGARCH, ARCH-t, ARCD, Multivariate GARCH, Time-varying risk and ARCH-in-mean.

#### UNIT III

Structural time-series modelling: State space models, Kalman filter. Local level model, Local linear trend model, Seasonal models, Cyclical models. Nonlinear time-series models: Parametric and nonparametric approaches. Autoregressive conditional heteroscedastic model and its extensions. Threshold and Functional coefficient autoregressive models.

#### **UNIT IV**

Non-linear programming, Kuhn-Tucker sufficient conditions, Elements of multiple objective programming, Dynamic Programming, Optimal control theory - Pontryagin's maximum principle, Time-optimal control problems.

#### **Suggested Readings**

Box GEP, Jenkins GM & Reinsel GC. 2008. *Time Series Analysis: Forecasting and Control*. 3 Ed. John Wiley. rd

Brockwell PJ & Davis RA. 1991. *Time Series: Theory and Methods* . 2<sup>nd</sup> Ed. Springer.

Chatfield C. 2004. *The Analysis of Time Series: An Introduction* . 6<sup>th</sup> Ed. Chapman & Hall/CRC.

Tong H. 1995. Nonlinear Time Series: A Dynamical System Approach . Oxford Univ. Press.

#### **Objective**

This is a course on Stochastic Processes that aims at describing some advanced level topics in this area of research with a very strong potential of applications. This course also prepares students for undertaking research in this area. This also helps prepare students for applications of this important subject to agricultural sciences.

#### **Theory**

#### UNIT I

Introduction to stochastic process - classification according to state space and time domain. Finite and countable state Markov chains; time-homogeneity; Chapman-Kolmogorov equations, marginal distribution and finite dimensional distributions. Classification of Markov chain. Canonical form of transition probability matrix of a Markov chain. Fundamental matrix; probabilities of absorption from transient states into recurrent classes in a finite Markov chain, mean time for absorption. Ergodic state

and Ergodic chain. Stationary distribution of a Markov chain, existence and evaluation of stationary distribution. Random walk and gamblers ruin problem.

#### UNIT II

Discrete state continuous time Markov process: Kolmogorov difference – differential equations. Birth and death process, pure birth process (Yule-Fury process). Immigration-Emigration process. Linear growth process, pure death process.

#### **UNIT III**

Renewal process: renewal process when time is discrete and continuous. Renewal function and renewal density. Statements of Elementary renewal theorem and Key renewal theorem.

#### **UNIT IV**

Stochastic process in biological sciences: Markov models in population genetics, compartmental analysis. Simple deterministic and stochastic epidemic model. General epidemic models-Karmack and McKendrick's threshold theorem. Recurrent epidemics.

#### **UNIT V**

Elements of queueing process; the queuing model M/M/1: steady state behaviors. Birth and death process in queuing theory- Multi channel models. Net work of Markovian queuing system.

#### UNIT VI

Branching process: Galton-Watson branching process. Mean and variance of size of nth generation, probability of ultimate extinction of a branching process. Fundamental theorem of branching process and applications.

#### **UNIT VII**

Wiener process- Wiener process as a limit of random walk. First passage time for Wiener process. Kolmogorov backward and forward diffusion equations and their applications.

#### **Suggested Readings**

#### AG. STAT. 619 SURVI

#### SURVIVAL ANALYSIS

2+0

#### **Objective**

The course deals with the study of demographic profiles and survival times. Indepth statistical properties and analysis is an important component of this course.

#### Theory

#### UNIT I

Measures of Mortality and Morbidity: Ratios and proportions, rates of continuous process, rates of repetitive events ,crude birth rate, Mortality measures used in vital statistics relationships between crude and age specific rates, standardized mortality ratios ,evaluation of person-year of exposed to risk in long term studies, prevalence and incidence of a disease, relative risk and odds ratio. Survival Distribution: Survival functions, hazard rate, hazard function, review of survival distributions: exponential, Weibull, Gamma, Rayleigh, Pareto, Lognormal~IFR and TFRA, Gompertz and Makeham. Gompertz and logistic distributions. Parametric (m.l.e) estimation. Types of Censoring: Type I, Type II, random and other types of censoring, right and left truncated distributions. Expectation and variance of future life time, series and parallel system of failures. Life Tables: Fundamental and construction.

#### **UNIT II**

Complete Mortality data, Estimation of Survival Function: Empirical survival function, estimation of survival function from grouped mortality data, joint distribution of the number of deaths, distribution of the estimation  $P_{\rm i}$  covariance of estimate, estimation of curves of deaths and central death rate and force of mortality rate. Incomplete Mortality data (non-parametric

models): Actuarial method, m.1.e method, moment and reduced sample method of estimation and their comparison. Product limit (Kaplan-Meier) method and cumulative hazard function (CHF) of estimation of survival function.

#### **UNIT III**

Fitting Parametric Survival Distribution: Special form of survival function cumulative hazard function (CHF) plots, Nelson's method of ungrouped data, construction of the likelihood function for survival data, least squares fitting, fitting a Gompertz distribution to grouped data. Some tests of Goodness of fit: Graphical, Kolmogorov-Smirnov statistics for complete, censored and truncated data, Chi-Square test and Anderson-Darling A²-statistics. Comparison of Mortality Experiences: Comparison of two life tables, some distribution- free methods (two samples) for ungrouped data, Two samples Kolmogorov-Smirnov test, Wilcoxon test for complete data and modified Wilcoxon test for incomplete data. Gilbert and Gehan's test, mean and variance of Wilcoxon statistics, generalization of Gehan's test. Testing for

Consistent Differences in Mortality : Mantel-Haenszel and log rank test. Generalized Mantel-Haenszel test (k-sample).

#### **UNIT IV**

Concomitant Variables: General parametric model for hazard function with observed concomitant variables. Additive and multiplicative models of hazard rate functions. Estimating multiplicative models, selection of concomitant variables. Logistic linear model, Concomitant Variable regarded as random variable. Age of onset distributions: Models of onset distributions and their estimation. Gompertz distribution, parallel system and Weibull distribution, Fatal short models of failure. Two component series system.

#### **Objective**

This is a course on Bioinformatics that aims at exposing the students to some advanced statistical and computational techniques related to bioinformatics. This course would prepare the students in understanding bioinformatics principles and their applications.

#### Theory

#### UNIT I

Genomic databases and analysis of high-throughput data sets, sequence annotation, ESTs, SNPs. BLAST and related sequence comparison methods. EM algorithm and other statistical methods to discover common motifs in biosequences. Multiple alignment and database search using motif models, ClustalW and others. Concepts in phylogeny. Gene prediction based on codons, Decision trees, Classificatory analysis, Neural Networks, Genetic algorithms, Pattern recognition, Hidden Markov models.

#### UNIT II

Computational analysis of protein sequence, structure and function. Expression profiling by microarray/gene chip, proteomics etc., Multiple alignment of protein sequences, Modelling and prediction of structure of proteins, Designer proteins, Drug designing.

#### **UNIT III**

Analysis of one DNA sequence (Modeling signals in DNA; Analysis of patterns; Overlaps and Generalizations), Analysis of multiple DNA or protein sequences (Alignment algorithms – Gapped global comparisons and Dynamic programming; use of linear gap models; protein sequences and substitution matrices – BLOSUM, PAM; Multiple sequences), BLAST (Comparison of two aligned sequences – Parameter calculation; Choice of a score; Bounds for P-value; Normalized and Bit scores, Karlin – Altschul sum statistic; comparison of two unaligned sequences; Minimum significance Lengths).

#### **UNIT IV**

Markov chains (MC with no absorbing states; Higher order Markov dependence; patterns in sequences; Markov chain Monte Carlo – Hastings-Metropolis algorithm, Gibbs sampling, Simulated Annealing; MC with absorbing States, Continuous-Time Markov chains) Hidden Markov Models (Forward and Backward algorithm; Viterbi algorithms; Estimation algorithm; UNIT V

Modeling protein families; Multiple sequence alignments; Pfam; Gene finding), Computationally intensive methods (Classical estimation methods; Bootstrap estimation and Confidence Intervals; Hypothesis testing; Multiple Hypothesis testing), Evolutionary models (Models of Nucleotide substitution; Discrete time models – The Jukes-Cantor Model, The Kimura Model, The Felsenstein Model; Continuous-time models),

#### UNIT VI

Phylogenetic tree estimation (Distances; Tree reconstruction – Ultrametric and Neighbor-Joining cases; Surrogate distances; Tree reconstruction; Parsimony and Maximum Likelihood; Modeling, Estimation and Hypothesis Testing;) Neural Networks (Universal Approximation Properties; Priors and Likelihoods, Learning Algorithms – Backpropagation; Sequence encoding and output interpretation; Prediction of Protein Secondary Structure; Prediction of Signal Peptides and their cleavage sites; Application for DNA and RNA Nucleotide Sequences), Analysis of SNPs and Haplotypes.

#### AG. STAT. 621 ADVANCED ECONOMETRICS

2+0

#### **Objective**

This is a course on Econometrics aims at exposing the students to some advanced level econometric methods and their applications to agricultural situations.

#### **Theory**

#### UNIT I

Quantile regression, binary quantile regression, extreme values, copula, loss functions, Point and interval forecasting, unconditional and conditional forecasting, forecasting with serially correlated errors, bootstrap: asymptotic expansion, bootstrap consistency, asymptotic refinement, recent developments for dependent time series

#### **UNIT II**

Multivariate time series: modelling the mean, stationary VAR models: properties, estimation, analysis and forecasting, VAR models with elements of nonlinearity, Non-stationary multivariate time series: spurious regression, cointegration, common trends; Volatility: Modelling the variance, The class of ARCH models: properties, estimation, analysis and forecasting, stochastic volatility, realized volatility.

#### **UNIT III**

Basic Concepts of Bayesian Inference, Probability and Inference, Posterior Distributions and Inference, Prior Distributions. The Bayesian linear model and autoregressive (AR) processes; Model selection with marginal likelihoods and fractional priors, Comparison of Bayesian Methods with Classical approaches, Bayes risk and their applications, and Sample Selection Monte Carlo integration, importance sampling and Gibbs sampling, The Regression Model with General Error Covariance Matrix, Qualitative Choice Models, Bayesian information criterion (BIC), Markov Chain Monte Carlo (MCMC) Model Composition and stochastic search variable selection, BUGS [Bayesian Inference Using Gibbs Sampling], BUCC [Bayesian Analysis, Computation and Communication].

#### AG. STAT. 651 RECENT ADVANCES IN THE FIELD OF SPECIALIZATION 1+0

#### **Objective**

To familiarize the students with the recent advances in the areas of their specialization to prepare them for undertaking research.

#### **Theory**

Recent advances in the field of specialization - sample surveys / design of experiments /statistical genetics / statistical modeling / econometrics / statistical inference, etc. will be covered by various speakers from the University / Institute as well as from outside the University / Institute in the form of seminar talks.

# NEW AND RESTRUCTURED POST-GRADUATE CURRICULA & SYLLABI

## Horticultural Science

Fruit Science
Vegetable Science
Floriculture & Land Scape Architecture
Plantation, Spices, Medicinal & Aromatic Crops
Post Harvest Technology

Gujarat Agricultural University, Gujarat (Anand, Sardarkrushinagar, Navsari, Junagadh)

May 2010

#### **EXECUTIVE SUMMARY**

M.Sc. and Ph. D programmes are envisaged in four divisions viz, Fruit Science, Vegetable Science, Floriculture and Land Scape Architecture and Plantation Crops, Spices, Medicinal and Aromatic crops. BSMA committee for Post harvest technology will take care of the processing and post harvest technology of horticultural crops. However, relevant courses are included under each of the four divisions.

### **Fruit Science**

☐ Thrust on advances in management of fruit crops
$\hfill \Box$ Biotechnology, biodiversity conservation, organic production and GAP in fruit cultivation are included.
$\hfill \square$ Faculty should be trained in advance and frontier aspects of biotechnology and post harvest
technology.
Vegetable Science
☐ Thrust on crop improvement and management of vegetable crops grown in India
☐ Precision farming, biotechnology, organic production and GAP in vegetable
cultivation are included.
☐ Faculty should be trained in advance aspects of biotechnology and post harvest
technology of vegetable crops.
Floriculture and Land Scape Architecture
☐ Thrust on high tech. floriculture, protected cultivation and advances in management of
major flower crops grown in India
☐ Turfing and turf management and CAD are included.
☐ Faculty should be trained in advance aspects of biotechnology and operation of CAD.
Plantation Crops, Spices, Medicinal and Aromatic Crops
☐ Thrust on advances in management and crop improvement of plantation crops, spices,
medicinal and aromatic crops.

Biotechnology, biodiversity conservation, organic production and GAP are included.
Faculty should be trained in advanced and frontier aspects of biotechnology and post
harvest technology Laboratory facilities should be strengthened for conduct of practical
classes especially in biotechnology, crop improvement and post harvest technology.
One time catch up grant should be awarded to each SAU for meeting expenditure for
upgrading the course requirements. Faculty training and retraining should be an integral
component. For imparting total quality management, a minimum of two faculties in
each division under an SAU should be given onjob training in reputed national and
international institutes.

## **Expected Output**

- Revamping of post graduate programme in whole of Horticultural Science throughout the country.
- Imparting quality education.
- Development of technical manpower to cater the need of government, corporate, quasi Government and research organizations both in India and abroad in horticulture.
- Exposure to the faculty in the latest technical knowhow.
- Vital step to sustain the Golden Revolution in India.

#### FRUIT SCIENCE

#### **Course Contents**

#### FSC 501 TROPICAL AND DRY LAND FRUIT PRODUCTION 2+1

#### **Objective**

To impart basic knowledge about the importance and management of tropical and dry land fruits grown in India.

#### **Theory**

Commercial varieties of regional, national and international importance, eco-physiological requirements, recent trends in propagation, rootstock influence, planting systems, cropping systems, root zone and canopy management, nutrient management, water management, fertigation, role of bioregulators, abiotic factors limiting fruit production, physiology of flowering, pollination fruit set and development, honeybees in cross pollination, physiological disorders- causes and remedies, quality improvement by management practices; maturity indices, harvesting, grading, packing, storage and ripening techniques; industrial and export potential, Agri. Export Zones(AEZ) and industrial supports.

### **Crops**

**UNIT I:** Mango and Banana **UNIT II:** Citrus and Papaya

**UNIT III:** Guava, Sapota and Jackfruit UNIT IV: Pineapple, Annonas and Avocado

**UNIT V:** Aonla, Pomegranate and Ber, minor fruits of tropics

#### **Practical**

Identification of important cultivars, observations on growth and development, practices in growth regulation, malady diagnosis, analyses of quality attributes, visit to tropical and arid zone orchards, Project preparation for establishing commercial orchards.

#### **Suggested Readings**

2+1

#### FSC 502 SUBTROPICAL AND TEMPERATE FRUIT PRODUCTION

#### **Objective**

To impart basic knowledge about the importance and management of subtropical and temperate fruits grown in India.

#### **Theory**

Commercial varieties of regional, national and international importance, ecophysiological requirements, recent trends in propagation, rootstock influence, planting systems, cropping systems, root zone and canopy management, nutrient management, water management, fertigation, bioregulation, abiotic factors limiting fruit production, physiology of flowering, fruit set and development, abiotic factors limiting production, physiological disorders-causes and remedies, quality improvement by management practices; maturity indices, harvesting, grading, packing, precooling, storage, transportation and ripening techniques; industrial and export potential, Agri Export Zones(AEZ) and industrial support.

#### **Crops**

**UNIT I:** Apple, pear, quince, grapes

**UNIT II:** Plums, peach, apricot, cherries

**UNIT III:** Litchi, loquat, persimmon, kiwifruit, strawberry

UNIT IV: Nuts- walnut, almond, pistachio, pecan, hazelnut

**UNIT V:** Minor fruits- mangosteen, carambola, bael, wood apple, fig, jamun, rambutan, pomegranate

#### **Practical**

Identification of important cultivars, observations on growth and development, practices in growth regulation, malady diagnosis, analyses of quality attributes, visit to tropical, subtropical, humid tropical and temperate orchards, Project preparation for establishing commercial orchards.

#### **Suggested Readings**

#### FSC 503 BIODIVERSITY AND CONSERVATION OF FRUIT CROPS 2+1

#### **Objective**

Understanding the principles of biodiversity and strategies in germplasm conservation of fruit crops.

#### Theory

#### **UNIT I**

Biodiversity and conservation; issues and goals, centres of origin of cultivated fruits; primary and secondary centres of genetic diversity.

#### **UNIT II**

Present status of gene centres; exploration and collection of germplasm; conservation of genetic resources – conservation *in situ* and *ex situ*.

#### **UNIT III**

Germplasm conservation- problem of recalcitrancy - cold storage of scions, tissue culture, cryopreservation, pollen and seed storage; inventory of germplasm, introduction of germplasm, plant quarantine.

#### **UNIT IV**

Intellectual property rights, regulatory horticulture. Detection of genetic constitution of germplasm and maintenance of core group.

#### **UNIT V**

GIS and documentation of local biodiversity, Geographical indication.

#### **Crops**

Mango, sapota, citrus, guava, banana, papaya, grapes, jackfruit, custard, apple, ber, aonla, malus, *Prunus* sp, litchi, nuts, coffee, tea, rubber, cashew, coconut, cocoa, palmyrah, arecanut, oil palm and betelvine.

#### **Practical**

Documentation of germplasm – maintenance of passport data and other records of accessions; field exploration trips, exercise on *ex situ* conservation – cold storage, pollen/seed storage, cryopreservation, visits to National Gene Bank and other centres of PGR activities. Detection of genetic constitution of germplasm, core sampling, germplasm characterization using molecular techniques.

#### **Suggested Readings**

Peter KV. 2008. *Biodiversity of Horticultural Crops*. Vol. II. Daya Publ. House.

#### FSC 504 CANOPY MANAGEMENT IN FRUIT CROPS 1+1

#### **Objective**

To impart knowledge about the principles and practices in canopy management of fruit crops.

#### **Theory**

#### **UNIT I**

Canopy management - importance and advantages; factors affecting canopy development.

#### **UNIT II**

Canopy types and structures with special emphasis on geometry of planting, canopy manipulation for optimum utilization of light. Light interception and distribution in different types of tree canopies.

#### **UNIT III**

Spacing and utilization of land area - Canopy classification; Canopy management through rootstock and scion.

#### **UNIT IV**

Canopy management through plant growth inhibitors, training and pruning and management practices.

#### **UNIT V**

Canopy development and management in relation to growth, flowering, fruiting and fruit quality in temperate fruits, grapes, passion fruits, mango, sapota, guava, citrus and ber.

#### **Practical**

Study of different types of canopies, training of plants for different canopy types, canopy development through pruning, use of plant growth inhibitors, geometry of planting; study on effect of different canopy types on production and quality of fruits.

#### **Suggested Readings**

Chadha KL & Shikhamany SD. 1999. *The Grape, Improvement, Production and Post Harvest Management*. Malhotra Publ. House.

Pradeepkumar T, Suma B, Jyothibhaskar & Satheesan KN. 2008. *Management of Horticultural Crops*. New India Publ. Agency.

## FSC 505 PROPAGATION AND NURSERY MANAGEMENT FOR FRUIT CROPS 2+1

### **Objective**

Familiarization with principles and practices of propagation and nursery management for fruit crops.

#### **Theory**

#### UNIT I

Introduction, life cycles in plants, cellular basis for propagation, sexual propagation, apomixis, polyembryony, chimeras. Principles factors influencing seed germination of horticultural crops, dormancy, hormonal regulation of germination and seedling growth.

#### **UNIT II**

Seed quality, packing, storage, certification, testing. Asexual propagation – rooting of soft and hard wood cutting under mist by growth regulators. Rooting of cuttings in hotbeds. Physiological, anatomical and biochemical aspects of root induction in cuttings. Layering – principle and methods.

#### **UNIT III**

Budding and grafting – selection of elite mother plants. Establishment of bud wood bank, stock, scion and inter stock, relationship – Incompatibility. Rejuvenation through top working – Progeny orchard and scion bank.

#### **UNIT IV**

Micro-propagation – principles and concepts, commercial exploitation in horticultural crops. Techniques - *in vitro* clonal propagation, direct organogenesis, embryogenesis, micrografting, meristem culture. Hardening, packing and transport of micro-propagules.

#### **UNIT V**

Nursery – types, structures, components, planning and layout. Nursery management practices for healthy propagule production.

#### **Practical**

Anatomical studies in rooting of cutting and graft union, construction of propagation structures, study of media and PGR. Hardening – case studies, micropropagation, explant preparation, media preparation, culturing – *in vitro* clonal propagation, meristem culture, shoot tip culture, axillary bud culture, direct organogenesis, direct and indirect embryogenesis, micro grafting, hardening. Visit to TC labs and nurseries.

#### **Suggested Readings**

Hartmann HT & Kester DE. 1989. *Plant Propagation – Principles and Practices*. Prentice Hall of India.

Bose TK, Mitra SK & Sadhu MK. 1991. Propagation of Tropical and Subtropical Horticultural Crops. Naya Prokash.

Singh SP. 1989 Mist Propagation. Metropolitan Book Co.

Rajan S & Baby LM. 2007. *Propagation of Horticultural Crops*. New India Publ. Agency.

Radha T & Mathew L. 2007. Fruit Crops. New India Publ. Agency.

#### FSC 506 BREEDING OF FRUIT CROPS

#### **Objective**

To impart comprehensive knowledge about the principles and practices of breeding of fruit crops.

2+1

#### **Theory**

Origin and distribution, taxonomical status - species and cultivars, cytogenetics, genetic resources, blossom biology, breeding systems, breeding objectives, ideotypes, approaches for crop improvement - introduction, selection, hybridization, mutation breeding, polyploidy breeding, rootstock breeding, improvement of quality traits, resistance breeding for biotic and abiotic stresses, biotechnological interventions, achievements and future thrust in the following selected fruit crops.

#### **Crops**

**UNIT I:** Mango, banana and pineapple

**UNIT II:** Citrus, grapes, guava and sapota

UNIT III: Jackfruit, papaya, custard apple, aonla, avocado and ber

**UNIT IV:** Mangosteen, litchi, jamun, phalsa, mulberry, raspberry, kokam and nuts

**UNIT V:** Apple, pear, plums, peach, apricot, cherries and strawberry

#### **Practical**

Characterization of germplasm, blossom biology, study of anthesis, estimating fertility status, practices in hybridization, ploidy breeding, mutation breeding, evaluation of biometrical traits and quality traits, screening for resistance, developing breeding programme for specific traits, visit to research stations working on tropical, subtropical and temperate fruit improvement.

#### **Suggested Readings**

Bose TK, Mitra SK & Sanyol D. (Eds.). 2002. Fruits of India – Tropical and Sub-tropical. 3rd Ed. Vols. I, II. Naya Udyog.

Singh S, Shivankar VJ, Srivastava AK & Singh IP. (Eds.). 2004. *Advances in Citriculture*. Jagmander Book Agency.

## FSC 507 POST HARVEST TECHNOLOGY FOR FRUIT CROPS 2+1

#### **Objective**

To facilitate deeper understanding on principles and practices of postharvest management of fruit crops.

#### Theory

#### UNIT I

Maturity indices, harvesting practices for specific market requirements, influence of pre-harvest practices, enzymatic and textural changes, respiration, transpiration.

#### UNIT II

Physiology and biochemistry of fruit ripening, ethylene evolution and ethylene management, factors leading to post-harvest loss, pre-cooling.

#### **UNIT III**

Treatments prior to shipment, viz., chlorination, waxing, chemicals, biocontrol agents and natural plant products. Methods of storageventilated, refrigerated, MAS, CA storage, physical injuries and disorders.

#### **UNIT IV**

Packing methods and transport, principles and methods of preservation, food processing, canning, fruit juices, beverages, pickles, jam, jellies, candies.

#### **UNIT V**

Dried and dehydrated products, nutritionally enriched products, fermented fruit beverages, packaging technology, processing waste management, food safety standards.

#### **Practical**

Analyzing maturity stages of commercially important horticultural crops, improved packing and storage of important horticultural commodities, physiological loss in weight of fruits and vegetables, estimation of transpiration, respiration rate, ethylene release and study of vase life extension in cut flower using chemicals, estimation of quality characteristics in stored fruits and vegetables, cold chain management - visit to cold storage and CA storage units, visit to fruit and vegetable processing units, project preparation, evaluation of processed horticultural products.

#### **Suggested Readings**

## FSC 508 GROWTH AND DEVELOPMENT OF HORTICULTURAL CROPS 2+1 Objective

To develop understanding of growth and development of horticultural crops which have implications in their management.

#### **Theory**

#### UNIT I

Growth and development- definition, parameters of growth and development, growth dynamics, morphogenesis.

#### **UNIT II**

Annual, semi-perennial and perennial horticultural crops, environmental impact on growth and development, effect of light, photosynthesis and photoperiodism vernalisation, effect of temperature, heat units, thermoperiodism.

#### **UNIT III**

Assimilate partitioning during growth and development, influence of water and mineral nutrition during growth and development, biosynthesis of auxins, gibberellins, cytokinins, abscissic acid, ethylene, brassino-steroids, growth inhibitors, morphactins, role of plant growth promoters and inhibitors.

#### **UNIT IV**

Developmental physiology and biochemistry during dormancy, bud break, juvenility, vegetative to reproductive interphase, flowering, pollination, fertilization and fruit set, fruit drop, fruit growth, ripening and seed development.

#### **UNIT V**

Growth and developmental process during stress - manipulation of growth and development, impact of pruning and training, chemical manipulations in horticultural crops, molecular and genetic approaches in plant growth development.

#### **Practical**

Understanding dormancy mechanisms in seeds, tubers and bulbs and stratification of seeds, tubers and bulbs, visit to arid, subtropical and temperate horticultural zones to identify growth and development patterns, techniques of growth analysis, evaluation of photosynthetic efficiency under different environments, study of growth regulator functions, hormone assays, understanding ripening phenomenon in fruits and vegetables, study of impact of physical manipulations on growth and development, study of chemical manipulations on growth and development, understanding stress impact on growth and development.

## FSC 509 BIOTECHNOLOGY OF HORTICULTURAL CROPS 2+1

#### **Objective**

Understanding the principles, theoretical aspects and developing skills in biotechnology of horticultural crops.

#### **Theory**

#### UNIT I

Harnessing bio-technology in horticultural crops, influence of plant materials, physical, chemical factors and growth regulators on growth and development of plant cell, tissue and organ culture. Contamination control.

#### **UNIT II**

Callus culture – types, cell division, growth, differentiation, morphogenesis, organogenesis, embryogenesis.

#### **UNIT III**

Use of bioreactors and *in vitro* methods for production of secondary metabolites, suspension culture, nutrition of tissues and cells, regeneration of tissues, ex vitro, establishment of tissue cultured plants.

#### **UNIT IV**

Physiology of hardening - hardening and field transfer, organ culture – meristem, embryo, anther, ovule culture, embryo rescue, somaclonal variation, protoplast culture and fusion. Construction and identification of somatic hybrids and cybrids

#### **UNIT V**

Wide hybridization, *in vitro* pollination and fertilization, haploids, *in vitro* mutation, artificial seeds, cryopreservation, rapid clonal propagation, genetic engineering in horticulture crops, use of molecular markers. *In vitro* selection for biotic and abiotic stress, achievements of biotechnology in horticultural crops.

#### **Practical**

An exposure to low cost, commercial and homestead tissue culture laboratories, media preparation, inoculation of explants for clonal propagation, callus induction and culture, regeneration of plantlets from callus, sub-culturing, techniques on anther, ovule, embryo culture, somaclonal variation, *in vitro* mutant selection against abiotic stress, protoplast culture, fusion technique, development of protocols for mass multiplication, project development for establishment of commercial tissue culture laboratory.

#### FSC 510 ORGANIC HORTICULTURE

1+1

#### **Objective**

To develop understanding of organic horticulture production system including GAP.

#### **Theory**

#### **UNIT I**

Organic horticulture – definition, synonyms and misnomers, principles, methods, merits and demerits.

#### **UNIT II**

Organic farming systems, components of organic horticultural systems, different organic inputs, their role in organic horticulture, role of biopesticides, biofertilizers, biodynamics and the recent developments.

#### **UNIT III**

EM technology and its impact in organic horticulture, indigenous practices of organic farming, sustainable soil fertility management, weed management practices in organic farming, biological/natural control of pests and diseases, organic horticulture in quality improvement.

#### **UNIT IV**

GAP - Principles and management, HACCP exercise, certification of organic products and systems, agencies involved at national and international levels, standards evolved by different agencies.

#### **UNIT V**

Constraints in certification, organic horticulture and export, IFOAM and global scenario of organic movement, post-harvest management of organic produce.

#### **Practical**

Features of organic orchards, working out conversion plan, Input analysismanures, nutrient status assessment of manures, biocomposting, biofertilizers and their application, panchagavya preparation and other organic nutrients application, methods of preparation of compost, vermicompost, green manuring, preparation of neem products and application, BD preparations and their role, EM technology and products, biological/natural control of pests and diseases, soil solarization, frame work for GAP, case studies, HACCP analysis, residue analysis in organic products, documentation for certification, visit to fields cultivated under organic practices.

#### **Suggested Readings**

Claude A, Vandana S, Sultan I, Vijaya L, Korah M & Bernard D. 2000. *The Organic Farming Reader*. Other Indian Press, Goa.

#### FSC 511 PROTECTED FRUIT CULTURE

2+1

#### **Objective**

Understanding the principles, theoretical aspects and developing skills in protected cultivation of fruit crops.

#### **Theory**

#### **UNIT I**

Greenhouse – World scenario, Indian situation: present and future, Different agro-climatic zones in India, Environmental factors and their effects on plant growth.

#### **UNIT II**

Basics of greenhouse design, different types of structures – glasshouse, shade net, poly tunnels - Design and development of low cost greenhouse structures.

#### **UNIT III**

Interaction of light, temperature, humidity, CO<sub>2</sub>, water on crop regulation - Greenhouse heating, cooling, ventilation and shading.

#### **UNIT IV**

Types of ventilation- Forced cooling techniques - Glazing materials – Micro irrigation and Fertigation.

#### **UNIT V**

Automated greenhouses, microcontrollers, waste water recycling, Management of pest and diseases – IPM.

**UNIT VI** 

Media – Types, uses and characteristics.

#### **Practical**

Designs of greenhouse, low cost poly tunnels, nethouse- Regulation of light, temperature, humidity in greenhouses, media, greenhouse cooling systems, ventilation systems, fertigation systems, special management practices, project preparation for greenhouses, visit to greenhouses.

#### **Suggested Readings**

Pant V Nelson. 1991. *Green House Operation and Management*. Bali Publ. Pradeepkumar T, Suma B, Jyothibhaskar & Satheesan KN. 2007. *Management of Horticultural Crops*. Parts I, II. New India Publ. Agency.

#### **Objective**

To impart comprehensive knowledge about the principles and practices of Good Agricultural Practises (GAP) for horticultural crops.

#### **Theory**

#### UNIT I

Genesis of GAP – definition/description, components listed by FAO, frame work.

#### **UNIT II**

Management of site history and soil, crop and fodder production, IPM, INM, IWM, irrigation water, crop production and protection. Identification of ways of improving the productivity profitability, and resource efficiency. harvest and post-harvest handling.

#### **UNIT III**

Animal production, product certification, animal waste management, animal health and welfare, harvest.

#### **UNIT IV**

On farm processing, storage, energy and waste management, human health, welfare, safety, wild life benefits.

#### **UNIT V**

Institutions involved in GAP certification. Indian agencies, EUREPGAP (European Retail Producers Group- Good Agricultural Practices), EUREP etc.

#### **Suggested Readings**

Peter KV. 2008. Basics in Horticulture. New India Publ. Agency.

## FSC 513 CLIMATE MANAGEMENT IN HORTICULTURAL PRODUCTION 1+0 Objective

To develop understanding about the impact and management of climate in horticultural production.

#### **Theory**

#### UNIT I

Introduction to climate change. Factors directly connected to climate change, average temperature, change in rainfall amount and patterns, rising atmospheric concentrations of CO<sub>2</sub>, pollution levels such as tropospheric ozone, change in climatic variability and extreme events like receding of glaciers in Himalayas.

#### **UNIT II**

Sensors for climate registration and crop monitoring, phytomonitoring and biosensors, plants response to the climate changes, premature bloom, marginally overwintering or inadequate winter chilling hours, insect pests, longer growing seasons and shifts in plant hardiness for perennial fruit crops, flowering plants and other plant species.

#### **UNIT III**

Impact of climate changes on invasive insect, disease, weed, pests, horticulture yield, quality and sustainability, climate management in field production – mulching - use of plastic- windbreak- spectral changes- frost protection. Climate management in greenhouse- heating - vents - CO<sub>2</sub> injection - screens - artificial light.

#### **UNIT IV**

Climate management for control of pests, diseases, quality, elongation of growth and other plant processes- closed production systems around the world. Special protected cultivation now and in the future, growth chambers, production in space, biosphere, future aspects of closed production, future greenhouse, use of LED as artificial light, future sensor types etc. clean development mechanism, role of tropical trees.

### **Suggested Readings**

#### FSC 601 ADVANCES IN BREEDING OF FRUIT CROPS 2+1

#### **Objective**

To update knowledge on the recent research trends in the field of breeding of fruit crops with special emphasis on tropical, subtropical and temperate crops grown in India.

#### **Theory**

Evolutionary mechanisms, adaptation and domestication, Genetic resources, cytogenetics, cytomorphology, chemotaxonomy, genetics of important traits and their inheritance pattern, variations and natural selection, spontaneous mutations, incompatibility systems in fruits, recent advances in crop improvement efforts- introduction and selection, chimeras, apomixis, clonal selections, intergeneric, interspecific and intervarietal hybridization, mutation and polyploid breeding, resistance breeding to biotic and abiotic stresses, breeding for improving quality, molecular and transgenic approaches in improvement of selected fruit crops.

#### **Crops**

**UNIT I:** Mango and banana

**UNIT II:** Papaya, grapes and citrus

**UNIT III:** Guava and sapota **UNIT IV:** Pineapple and avocado

**UNIT V:** Apple, pear, plums, peaches, apricot, cherries and strawberry

#### **Practical**

Description and cataloguing of germplasm, pollen viability tests, pollen germination-isozyme techniques-survey and clonal selection, observations on pest, disease and stress reactions in inbreds and hybrids, use of mutagenes and colchicine for inducing mutation and ploidy changes, practices in different methods of breeding fruit crops and in-vitro breeding techniques.

#### **Suggested Readings**

#### FSC 602 ADVANCES IN PRODUCTION OF FRUIT CROPS 2+1

#### **Objective**

To keep abreast with latest developments and trends in production technology of fruit crops.

#### **Theory**

National and International scenario in fruit production, Recent advances in propagation - root stock influence, planting systems, High density planting, crop modelling, Precision farming, decision support systems - aspects of crop regulation- physical and chemical regulation effects on physiology and development, influence of stress factors, strategies to overcome stress effects, integrated and modern approaches in water and nutrient management, Total quality management (TQM) - Current topics.

#### **Crops**

**UNIT I**: Mango and banana

**UNIT II:** Papaya, grapes and citrus

**UNIT III:** Guava, sapota and aonla

**UNIT IV:** Pineapple, avocado and jack

**UNIT V:** Apple, pear, plums, strawberry, peach, apricot, cherries and nut crops

#### **Practical**

Survey of existing fruit cropping systems and development of a model cropping system, Estimating nutrient deficiency- estimation of water use efficiency, soil test-crop response correlations, practices in plant growth regulation, studying physiological and biochemical responses, quality analysis.

#### **Suggested Readings**

Bose TK, Mitra SK & Rathore DS. (Eds.). 1988. *Temperate Fruits – Horticulture*. Allied Publ.

## FSC 603 ADVANCES IN GROWTH REGULATION OF FRUIT CROPS 2+1 Objective

Appraisal on the advances in growth regulation of fruit crops.

#### **Theory**

#### UNIT I

Ecophysiological influences on growth and development of fruit crops flowering, fruit set- Crop load and assimilate partitioning and distribution.

#### **UNIT II**

Root and canopy regulation, study of plant growth regulators in fruit culture- structure, biosynthesis, metabolic and morphogenetic effects of different plant growth promoters and growth retardants.

#### **UNIT III**

Absorption, translocation and degradation of phytohormones – internal and external factors influencing hormonal synthesis, biochemical action, growth promotion and inhibition, canopy management for fertigated orchards.

#### **UNIT IV**

Growth regulation aspects of propagation, embryogenesis, seed and bud dormancy, fruit bud initiation, regulation of flowering, off season production.

#### UNIT V

Flower drop and thinning, fruit set and development, fruit drop, parthenocarpy, fruit maturity and ripening and storage, molecular approaches in crop growth regulation- current topics.

#### **Practical**

Root- shoot studies, quantifying the physiological and biochemical effects of physical and chemical growth regulation, bioassay and isolation through chromatographic analysis for auxins, gibberellins, experiments on growth regulation during propagation, dormancy, flowering, fruit set and fruit development stages.

### FSC 604 GENOMICS AND BIOINFORMATICS IN HORTICULTURE 2+1 Objective

Studies on the fundamentals and application of genomics and bioinformatics in horticulture.

#### **Theory**

#### UNIT I

Primer on bioinformatics and computational genomics, database fundamentals – biological databases, horticultural genome and protein databases, functional genomics.

#### **UNIT II**

Dynamic Programming Sequence Alignment, BLAST search engine, FASTA search engine, Microarrays- Microarray Clustering and Classification, Terminologies and Ontologies - EcoCYC knowledge base of E. Coli metabolism - Description of UMLS Semantic Network.

#### **UNIT III**

Multiple Sequence Alignment, MSA algorithm descriptions, ClustalW, 1D Motifs, Algorithms and Databases, methods for sequence weighting, BLOCKS database, Making BLOCK motifs, PROSITE database, 3D structure alignment, SCOP, DALI, LOCK, MUSTA algorithm for geometric hashing and multiple alignment.

#### **UNIT IV**

Hidden Markov models , Molecular energetics and dynamics , Protein structure prediction, Genetic networks - Modeling and Simulation of

Genetic Regulatory Systems- KEGG database of genes and gene pathways/networks - EcoCYC database of metabolic pathways in E. Coli - EGF-signal pathway modeling, Gene finding algorithms – Genome Annotation Assessment Project for Arabidopsis, Comparative genomics algorithms, Genome Alignment.

#### **UNIT V**

3D structure computations, NMR, Crytallography, NMR Structure Determination, X-ray Crystallography Structure Determination, Distance Geometry Description, RNA secondary structure, Molecular Modelling and Drug discovery programs.

#### **UNIT VI**

Phylogenetic algorithms – Tree base database of phylogenetic information for plants mostly, Tree of Life Page, Samples from the Tree of Life, Ribosomal Database Project, Natural Language Processing, Proteomics, 3D Motifs, Applications and Integration with Horticulture, Final Thoughts.

#### **Practical**

Computers, Operating systems and Programming languages, Internet Resources, Horticultural Genome and Protein Databases, BLAST/RNA Structure, Sequence Alignment, Microarray Data Analysis, Ontology, MSA, HMMs, Identification of Functional Sites in Structures, Protein Structure Prediction - Phylogenetics - Gene Finding - Molecular Modelling and Drug Discovery Software – Assignments.

## FSC 605 BIOTIC AND ABIOTIC STRESS MANAGEMENT IN HORTICULTURAL CROPS

#### **Objective**

To update knowledge on the recent research trends in the field of biotic andabiotic stress management in horticultural crops.

#### **Theory**

#### **UNIT I**

Stress – definition, classification, stresses due to water (high and low), temperature (high and low), radiation, wind, soil conditions (salinity, alkalinity, ion toxicity, fertilizer toxicity, etc.).

#### **UNIT II**

Pollution - increased level of CO<sub>2</sub>, industrial wastes, impact of stress in horticultural crop production, stress indices, physiological and biochemical factors associated with stress, horticultural crops suitable for different stress situations.

#### **UNIT III**

Crop modeling for stress situations, cropping system, assessing the stress through remote sensing, understanding adaptive features of crops for survival under stress, interaction among different stress and their impact on crop growth and productivity.

#### **UNIT IV**

Greenhouse effect and methane emission and its relevance to abiotic stresses, use of anti transpirants and PGRs in stress management, mode of action and practical use, HSP inducers in stress management techniques of soil moisture conservation, mulching, hydrophilic polymers.

#### **UNIT V**

Rain water harvesting, increasing water use efficiency, skimming technology, contingency planning to mitigate different stress situations, cropping systems, stability and sustainability indices.

#### **Practical**

Seed treatment /hardening practices, container seedling production, analysis of soil moisture estimates (FC, ASM, PWP), analysis of plant stress factors, RWC, chlorophyll flurosence, chlorophyll stability index, ABA content, plant waxes, stomatal diffusive resistance, transpiration, photosynthetic rate etc. under varied stress situations, influence of stress on growth and development of seedlings and roots, biological efficiencies, WUE, solar energy conversion and efficiency, crop growth sustainability indices, economics of stress management, visit to orchards and water shed locations.

#### **FSC606**

#### SYSTEMATICS OF FRUITS CROPS

(2+1)

#### **Theory**

Systematic pomology – definition and importance, systems of classification and nomenclature; classification of tropical, subtropical fruits and plantation crops; botanical description of families, genera and species and pomological description of varieties.

#### **Practical:**

Preparation and use of keys for identifying varieties and species of fruit and plantation crops, pomological description important commercial varieties in different fruits and plantation crops.

#### VEGETABLE SCIENCE

#### **Course Contents**

#### VSC 501 PRODUCTION TECHNOLOGY OF COOL SEASON VEGETABLE CROPS

2+1

#### **Objective**

To educate production technology of cool season vegetables.

#### **Theory**

Introduction, botany and taxonomy, climatic and soil requirements, commercial varieties/hybrids, sowing/planting times and methods, seed rate and seed treatment, nutritional and irrigation requirements, intercultural operations, weed control, mulching, physiological disorders, harvesting, post-harvest management, plant protection measures and seed production of:

UNIT I Potato

**UNIT II** Cole crops: cabbage, cauliflower, knoll kohl, sprouting broccoli, Brussels sprout

UNIT III Root crops: carrot, radish, turnip and beetroot

**UNIT IV** Bulb crops: onion and garlic

**UNIT V** Peas and broad bean, green leafy cool season vegetables

#### **Practical**

Cultural operations (fertilizer application, sowing, mulching, irrigation, weed control) of winter vegetable crops and their economics; Experiments to demonstrate the role of mineral elements, plant growth substances and herbicides; study of physiological disorders; preparation of cropping scheme for commercial farms; visit to commercial greenhouse/polyhouse.

# VSC 502 PRODUCTION TECHNOLOGY OF WARM SEASON VEGETABLE CROPS 2+1

# **Objective**

To teach production technology of warm season vegetables.

# **Theory**

Introduction, botany and taxonomy, climatic and soil requirements, commercial varieties/hybrids, sowing/planting times and methods, seed rate and seed treatment, nutritional and irrigation requirements, intercultural operations, weed control, mulching, physiological disorders, harvesting, post harvest management, plant protection measures, economics of crop production and seed production of:

#### **IINIT I**

Tomato, eggplant, hot and sweet peppers

# **UNIT II**

Okra, beans and cowpea

**UNIT III** 

Cucurbitaceous crops

**UNIT IV** 

Tapioca and sweet potato

**UNIT V** 

Green leafy warm season vegetables

# **Practical**

Cultural operations (fertilizer application, sowing, mulching, irrigation, weed control) of summer vegetable crops and their economics; study of physiological disorders and deficiency of mineral elements, preparation of cropping schemes for commercial farms; experiments to demonstrate the role of mineral elements, physiological disorders; plant growth substances and herbicides; seed extraction techniques; identification of important pests and diseases and their control; maturity standards; economics of warm season vegetable crops.

# **Suggested Readings**

# VSC 503 BREEDING OF VEGETABLE CROPS 2+1

# **Objective**

To educate principles and practices adopted for breeding of vegetable crops.

# **Theory**

Origin, botany, taxonomy, cytogenetics, genetics, breeding objectives, breeding methods (introduction, selection, hybridization, mutation), varieties and varietal characterization, resistance breeding for biotic and abiotic stress, quality improvement, molecular marker, genomics, marker assisted breeding and QTLs, biotechnology and their use in breeding in vegetable crops-Issue of patenting, PPVFR act.

#### UNIT I

Potato and tomato

# **UNIT II**

Eggplant, hot pepper, sweet pepper and okra

# **UNIT III**

Peas and beans, amaranth, chenopods and lettuce

#### **LINIT IV**

Gourds, melons, pumpkins and squashes

# **UNIT V**

Cabbage, cauliflower, carrot, beetroot, radish, sweet potato and tapioca

# **Practical**

Selection of desirable plants from breeding population observations and analysis of various qualitative and quantitative traits in germplasm, hybrids and segregating generations; induction of flowering, palanological studies, selfing and crossing techniques in vegetable crops; hybrid seed production of vegetable crops in bulk. screening techniques for insect-pests, disease and environmental stress resistance in above mentioned crops, demonstration of sib-mating and mixed population; molecular marker techniques to identify useful traits in the vegetable crops and special breeding techniques. Visit to breeding blocks.

Swarup V. 1976. *Breeding Procedure for Cross-pollinated Vegetable Crops*. ICAR.

# **Objective**

To teach the physiology of growth and development of vegetable crops.

# **Theory**

# **UNIT I**

Cellular structures and their functions; definition of growth and development, growth analysis and its importance in vegetable production.

# **UNIT II**

Physiology of dormancy and germination of vegetable seeds, tubers and bulbs; Role of auxins, gibberellilns, cyktokinins and abscissic acid; Application of synthetic hormones, plant growth retardants and inhibitors for various purposes in vegetable crops; Role and mode of action of morphactins, antitranspirants, anti-auxin, ripening retardant and plant stimulants in vegetable crop production.

#### **UNIT III**

Role of light, temperature and photoperiod on growth, development of underground parts, flowering and sex expression in vegetable crops; apical dominance.

#### **UNIT IV**

Physiology of fruit set, fruit development, fruit growth, flower and fruit drop; parthenocarpy in vegetable crops; phototropism, ethylene inhibitors, senescence and abscission; fruit ripening and physiological changes associated with ripening.

# **UNIT V**

Plant growth regulators in relation to vegetable production; morphogenesis and tissue culture techniques in vegetable crops.

# **Practical**

Preparation of solutions of plant growth substances and their application; experiments in breaking and induction of dormancy by chemicals; induction of parthenocarpy and fruit ripening; application of plant growth substances for improving flower initiation, changing sex expression in cucurbits and checking flower and fruit drops and improving fruit set in solanaceous vegetables; growth analysis techniques in vegetable crops.

# VSC 505 SEED PRODUCTION TECHNOLOGY OF VEGETABLE CROPS 2+1

# **Objective**

To educate principles and methods of quality seed and planting material production in vegetable crops.

# **Theory**

#### UNIT I

Definition of seed and its quality, new seed policies; DUS test, scope of vegetable seed industry in India.

# **UNIT II**

Genetical and agronomical principles of seed production; methods of seed production; use of growth regulators and chemicals in vegetable seed production; floral biology, pollination, breeding behaviour, seed development and maturation; methods of hybrid seed production.

# **UNIT III**

Categories of seed; maintenance of nucleus, foundation and certified seed; seed certification, seed standards; seed act and law enforcement, plant quarantine and quality control.

# **UNIT VI**

Physiological maturity, seed harvesting, extraction, curing, drying, grading, seed processing, seed coating and pelleting, packaging (containers/packets), storage and cryopreservation of seeds, synthetic seed technology.

# **UNIT V**

Agro-techniques for seed production in solanaceous vegetables, cucurbits, leguminous vegetables, cole crops, bulb crops, leafy vegetables, okra, vegetatively propagated vegetables.

# **Practical**

Seed sampling, seed testing (genetic purity, seed viability, seedling vigour, physical purity) and seed health testing; testing, releasing and notification procedures of varieties; floral biology; rouging of off-type; methods of hybrid seed production in important vegetable and spice crops; seed extraction techniques; handling of seed processing and seed testing equipments; seed sampling; testing of vegetable seeds for seed purity, germination, vigour and health; visit to seed processing units, seed testing laboratory and seed production farms.

# VSC 506 SYSTEMATICS OF VEGETABLE CROPS 1+1

# **Objective**

To teach morphological, cytological and molecular taxonomy of vegetable crops.

# **Theory**

#### UNIT I

Principles of classification; different methods of classification; salient features of international code of nomenclature of vegetable crops.

# **UNIT II**

Origin, history, evolution and distribution of vegetable crops, botanical description of families, genera and species covering various tropical, subtropical and temperate vegetables.

# **UNIT III**

Cytological level of various vegetable crops; descriptive keys for important vegetables.

# **UNIT IV**

Importance of molecular markers in evolution of vegetable crops; molecular markers as an aid in characterization and taxonomy of vegetable crops.

# **Practical**

Identification, description, classification and maintenance of vegetable species and varieties; survey, collection of allied species and genera locally available; preparation of keys to the species and varieties; methods of preparation of herbarium and specimens.

# **Suggested Readings**

# VSC 507 PRODUCTION TECHNOLOGY OF UNDEREXPLOITED VEGETABLE CROPS 1+1

# **Objective**

To educate production technology of underutilized vegetable crops.

# **Theory**

Introduction, botany and taxonomy, climatic and soil requirements, commercial varieties/hybrids, sowing/planting times and methods, seed rate and seed treatment, nutritional and irrigation requirements, intercultural operations, weed control, mulching, physiological disorders, harvesting, post harvest management, plant protection measures and seed production of:

# **UNIT I**

Asparagus, artichoke and leek

# **UNIT II**

Brussels's sprout, Chinese cabbage, broccoli, kale and artichoke.

# **UNIT III**

Amaranth, celery, parsley, parsnip, lettuce, rhubarb, spinach, basella, bathu (chenopods) and chekurmanis.

# **UNIT IV**

Elephant foot yam, lima bean, winged bean, vegetable pigeon pea, jack bean and sword bean.

# **UNIT V**

Sweet gourd, spine gourd, pointed gourd, Oriental pickling melon and little gourd (kundru).

# **Practical**

Identification of seeds; botanical description of plants; layout and planting; cultural practices; short-term experiments of underexploited vegetables.

# **Suggested Readings**

Bhat KL. 2001. Minor Vegetables - Untapped Potential. Kalyani.

lndira P & Peter KV. 1984. *Unexploited Tropical Vegetables*. Kerala Agricultural University, Kerala.

# VSC 508 ORGANIC VEGETABLE PRODUCTION TECHNOLOGY 1+1 Objective

To educate principles, concepts and production of organic farming in vegetable crops.

# **Theory**

#### UNIT I

Importance, principles, perspective, concept and component of organic production of vegetable crops.

# **UNIT II**

Organic production of vegetables crops, *viz.*, solanaceous crops, cucurbits, cole crops, root and tuber crops.

# **UNIT III**

Managing soil fertility, pests and diseases and weed problems in organic farming system; crop rotation in organic horticulture; processing and quality control for organic foods.

# **UNIT IV**

Methods for enhancing soil fertility, mulching, raising green manure crops. Indigenous methods of compost, Panchagavvya, Biodynamics, preparation etc Pest and disease management in organic farming; ITK's in organic farming. Role of botanicals and bio-control agents.

# **UNIT V**

GAP and GMP- Certification of organic products; organic production and export - opportunity and challenges.

# **Practical**

Method of preparation of compost, vermicomposting, biofertilizers, soil solarization, bio pesticides in horticulture, green manuring, mycorrhizae and organic crop production, water management, organic soil amendment for root disease, weed management in organic horticulture. Visit to organic fields and marketing centers.

# **Suggested Readings**

# VSC 509 FUNDAMENTALS OF PROCESSING OF VEGETABLES 2+1

# **Objective**

To educate principles and practices of processing of vegetable crops.

# **Theory**

# **UNIT I**

History of food preservation. Present status and future prospects of vegetable preservation industry in India.

#### UNIT II

Spoilage of fresh and processed horticultural produce; biochemical changes and enzymes associated with spoilage of horticultural produce; principal spoilage organisms, food poisoning and their control measures. Role of microorganisms in food preservation.

# **UNIT III**

Raw materials for processing. Primary and minimal processing; processing equipments; Layout and establishment of processing industry, FPO licence. Importance of hygiene; Plant sanitation.

# **UNIT IV**

Quality assurance and quality control, TQM, GMP. Food standards – FPO, PFA, etc. Food laws and regulations.

#### UNIT V

Food safety – Hazard analysis and critical control points (HACCP). Labeling and labeling act, nutrition labeling.

# **UNIT VI**

Major value added products from vegetables. Utilization of byproducts of vegetable processing industry; Management of waste from processing factory.

# **UNIT VII**

Investment analysis. Principles and methods of sensory evaluation of fresh and processed vegetables.

# **Practical**

Study of machinery and equipments used in processing of horticultural produce; Chemical analysis for nutritive value of fresh and processed vegetables; Study of different types of spoilages in fresh as well as processed horticultural produce; Classification and identification of spoilage organisms; Study of biochemical changes and enzymes associated with spoilage; Laboratory examination of vegetable products; Sensory evaluation of fresh and processed vegetables; Study of food standards – National, international, CODEX Alimentarius; Visit to processing units to study the layout, equipments, hygiene, sanitation and residual / waste management.

# VSC 601 ADVANCES IN VEGETABLE PRODUCTION 2+1 Objective

To keep abreast with latest developments and trends in production technology of vegetable crops.

# **Theory**

Present status and prospects of vegetable cultivation; nutritional and medicinal values; climate and soil as critical factors in vegetable production; choice of varieties; nursery management; modern concepts in water and weed management; physiological basis of growth, yield and

quality as influenced by chemicals and growth regulators; role of organic manures, inorganic fertilizers, micronutrients and biofertilizers; response of genotypes to low and high nutrient management, nutritional deficiencies, disorders and correction methods; different cropping systems; mulching; containerized culture for year round vegetable production; low cost polyhouse; net house production; crop modeling, organic gardening; vegetable production for pigments, export and processing of:

# **UNIT I**

Tomato, brinjal, chilli, sweet pepper and potato

#### **UNIT II**

Cucurbits, cabbage, cauliflower and knol-khol

# **UNIT III**

Bhendi, onion, peas and beans, amaranthus and drumstick

# **UNIT IV**

Carrot, beet root and radish

# **UNIT V**

Sweet potato, tapioca, elephant foot yam and taro

# **Practical**

Seed hardening treatments; practices in indeterminate and determinate vegetable growing and organic gardening; portrays and ball culture; diagnosis of nutritional and physiological disorders; analysis of physiological factors like anatomy; photosynthesis; light intensity in different cropping situation; assessing nutrient status, use of plant growth regulators; practices in herbicide application; estimating water requirements in relation to crop growth stages, maturity indices; dryland techniques for rainfed vegetable production; production constraints; analysis of different cropping system in various situation like cold and hot set; vegetable waste recycling management; quality analysis; marketing survey of the above crops; visit to vegetable and fruit mals and packing houses.

# VSC 602 ADVANCES IN BREEDING OF VEGETABLE CROPS 2+1

# **Objective**

To update knowledge on the recent research trends in the field of breeding of vegetable crops with special emphasis on tropical, subtropical and temperate crops grown in India.

# **Theory**

Evolution, distribution, cytogenetics, genetic resources, genetic divergence, types of pollination and fertilization mechanisms, sterility and incompatibility, anthesis and pollination, hybridization, inter-varietal, interspecific and inter-generic hybridization, heterosis breeding, inheritance pattern of traits, qualitative and quantitative, plant type concept and selection indices, genetics of spontaneous and induced mutations, problems and achievements of mutation breeding, ploidy breeding and its achievements, *in vitro* breeding; breeding techniques for improving quality and processing characters; breeding for stresses, mechanism and genetics of resistance, breeding for salt, drought; low and high temperature; toxicity and water logging resistance, breeding for pest, disease, nematode and multiple resistance of:

# **UNIT I**

Tomato, brinjal, chilli, sweet pepper and potato

# **UNIT II**

Cucurbits, Cabbage, cauliflower and knol-khol

# **UNIT III**

Bhindi/okra, onion, peas and beans, amaranthus and drumstick

#### **UNIT IV**

Carrot, beet root and radish

# **UNIT V**

Sweet potato, tapioca, elephant foot yam and taro

#### **Practical**

Designing of breeding experiments, screening techniques for abiotic stresses, screening and rating for pest, disease and nematode resistance, estimation of quality and processing characters, screening for-quality improvement, estimation of heterosis and combining ability, induction and identification of mutants and polyploids, distant hybridization and embryo rescue techniques.

# VSC 603 PROTECTED CULTIVATION OF VEGETABLE CROPS 1+1 Objective

To impart latest knowledge in growing of vegetable crops under protected environmental condition.

# **Theory**

Crops: Tomato, capsicum, cucumber, melons and lettuce

#### **UNIT I**

Importance and scope of protected cultivation of vegetable crops; principles used in protected cultivation, energy management, low cost structures; training methods; engineering aspects.

# **UNIT II**

Regulatory structures used in protected structures; types of greenhouse/polyhouse/nethouse, hot beds, cold frames, effect of environmental factors, *viz.* temperature, light, CO<sub>2</sub> and humidity on growth of different vegetables, manipulation of CO<sub>2</sub>, light and temperature for vegetable production, fertigation.

#### UNIT III

Nursery raising in protected structures like poly-tunnels, types of benches and containers, different media for growing nursery under cover.

# **UNIT IV**

Regulation of flowering and fruiting in vegetable crops, technology for raising tomato, sweet pepper, cucumber and other vegetables in protected structures, training and staking in protected crops, varieties and hybrids for growing vegetables in protected structures.

# **UNIT V**

Problem of growing vegetables in protected structures and their remedies, insect and disease management in protected structures; soil-less culture, use of protected structures for seed production.

#### **Practical**

Study of various types of structures, methods to control temperature, CO<sub>2</sub> light, media, training and pruning, maintenance of parental lines and hybrid seed production of vegetables, fertigation and nutrient management, control of insect-pests and disease in greenhouse; economics of protected cultivation, visit to established green/polyhouse/net house/shade house in the region.

# VSC 604 BIOTECHNOLOGY IN VEGETABLE CROPS 2+1

# **Objective**

To teach advances in biotechnology for improvement of vegetable crops.

# **Theory**

Crops: Tomato, eggplant, hot and sweet pepper, potato, cabbage, cauliflower, tapioca, onion, cucurbits.

# **UNIT I**

In vitro culture methods and molecular approaches for crop improvement in vegetables, production of haploids, disease elimination in horticultural crops, micro grafting, somoclones and identification of somaclonal variants, in vitro techniques to overcome fertilization barriers, in vitroproduction of secondary metabolites.

# **UNIT II**

Protoplast culture and fusion; construction, identification and characterization of somatic hybrids and cybrids, wide hybridization, embryo rescue of recalcitrant species, *in vitro* conservation.

# **UNIT III**

*In vitro* mutation for biotic and abiotic stresses, recombinant DNA methodology, gene transfer methods, tools, methods, applications of rDNA technology.

# **UNIT IV**

Quality improvement, improvement for biotic and abiotic stresses, transgenic plants.

# **UNIT V**

Role of molecular markers in characterization of transgenic crops, fingerprinting of cultivars etc., achievements, problems and future thrusts in horticultural biotechnology.

# **Practical**

Establishment of axenic explants, callus initiation and multiplication, production of suspension culture, cell and protoplast culture, fusion, regeneration and identification of somatic hybrids and cybrids; Identification of embryonic and non-embryonic calli, development of cell lines; *in vitro* mutant selection for biotic and abiotic stresses, *In vitro* production and characterization of secondary metabolites, isolated microspore culture, isolation and amplification of DNA, gene transfer methods, molecular characterization of transgenic plants.

Williamson R. 1981-86. Genetic Engineering. Vols. I-V.

# **Objective**

To educate the recent trends in the certification, processing and storage of vegetable crops.

# **Theory**

#### **UNIT I**

Seed certification, objectives, organization of seed certification, minimum seed certification standards of vegetable crops, field inspection, specification for certification.

#### **UNIT II**

Seed processing, study of seed processing equipments seed cleaning and upgrading, Seed packing and handling, equipment used for packaging of seeds, procedures for allocating lot number.

# **UNIT III**

Pre-conditioning, seed treatment, benefits, types and products, general principles of seed storage, advances in methods of storage, quality control in storage, storage containers, seed longevity and deterioration, sanitation, temperature and relative humidity control.

#### **UNIT IV**

Seed testing; ISTA rules for testing, moisture, purity germination, vigor test, seed sampling, determination of genuineness of varieties, seed viability, seed health testing; seed dormancy and types of dormancy, factors responsible for dormancy.

# **UNIT V**

Seed marketing, demand forecast, marketing organization, economics of seed production; farmers' rights, seed law enforcement, seed act and seed policy.

# **Practical**

Seed sampling, purity, moisture testing, seed viability, seed vigor tests, seed health testing, seed cleaning, grading and packaging; handling of seed testing equipment and processing machines; seed treatment methods, seed priming and pelleting; field and seed inspection, practices in rouging, seed storage, isolation distances, biochemical tests, visit to seed testing laboratories and processing plants, mixing and dividing instruments, visit to seed processing unit and warehouse visit and know about sanitation standards.

# VSC 606 ABIOTIC STRESS MANAGEMENT IN VEGETABLE CROPS 2+1 Objective

To update knowledge on the recent research trends in the field of breeding of vegetable crops with special emphasis on tropical, subtropical and temperate crops grown in India.

# **Theory**

# **UNIT I**

Environmental stress and its types, soil parameters including pH, classification of vegetable crops based on susceptibility and tolerance to various types of stress; root stock, use of wild species, use of antitranspirants.

# **UNIT II**

Mechanism and measurements of tolerance to drought, water logging, soil salinity, frost and heat stress in vegetable crops.

# **UNIT III**

Soil-plant-water relations under different stress conditions in vegetable crops production and their management practices.

# **UNIT IV**

Techniques of vegetable growing under water deficit, water logging, salinity and sodicity.

# **UNIT V**

Techniques of vegetable growing under high and low temperature conditions, use of chemicals in alleviation of different stresses.

#### **Practical**

Identification of susceptibility and tolerance symptoms to various types of stress in vegetable crops, measurement of tolerance to various stresses in vegetable crops, short term experiments on growing vegetable under water deficit, water-logging, salinity and sodicity, high and low temperature conditions, and use of chemicals for alleviation of different stresses.

# FLORICULTURE AND LANDSCAPE ARCHITECTURE Course Contents

# FLA 501 BREEDING OF FLOWER CROPS AND ORNAMENTAL PLANTS 2+1 Objective

To impart comprehensive knowledge about the principles and practices of breeding of flower crops and ornamental plants.

# **Theory**

# **UNIT I**

Principles -- Evolution of varieties, origin, distribution, genetic resources, genetic divergence- Patents and Plant Variety Protection in India.

# **UNIT II**

Genetic inheritance -- of flower colour, doubleness, flower size, fragrance, post harvest life.

# **UNIT III**

Breeding methods suitable for sexually and asexually propagated flower crops and ornamental plants-- introduction, selection, domestication, polyploid and mutation breeding for varietal development, Role of heterosis, Production of hybrids, Male sterility, incompatibility problems, seed production of flower crops.

# **UNIT IV**

Breeding constraints and achievements made in commercial flowers - rose, jasmine, chrysanthemum, marigold, tuberose, crossandra, carnation, dahlia, gerbera, gladioli, orchids, anthurium, aster, heliconia, liliums, nerium, gaillardia.

# **UNIT V**

Breeding constraints and achievements made in ornamental plants – petunia, hibiscus, bougainvillea, Flowering annuals (zinnia, cosmos, dianthus, snapdragon, pansy) and ornamental foliages— Introduction and selection of plants for waterscaping and xeroscaping.

#### **Practical**

Description of botanical features— Cataloguing of cultivars, varieties and species in flowers, floral biology, selfing and crossing, evaluation of hybrid progenies, seed production-Induction of mutants through physical and chemical mutagens, induction of polyploidy, screening of plants for biotic, abiotic stresses and environmental pollution, *in vitro* breeding in flower crops and ornamental plants.

# **Suggested Readings**

# FLA 502 PRODUCTION TECHNOLOGY OF CUT FLOWERS 2+1

# **Objective**

To impart basic knowledge about the importance and production technology of cut flowers grown in India.

# **Theory**

#### UNIT I

Scope of cut flowers in global trade, Global Scenario of cut flower production, Varietal wealth and diversity, area under cut flowers and production problems in India- Patent rights, nursery management, media for nursery, special nursery practices.

# **UNIT II**

Growing environment, open cultivation, protected cultivation, soil requirements, artificial growing media, soil decontamination techniques, planting methods, influence of environmental parameters, light, temperature, moisture, humidity and CO<sub>2</sub> on growth and flowering.

# **UNIT III**

Flower production – water and nutrient management, fertigation, weed management, rationing, training and pruning, disbudding, special horticultural practices, use of growth regulators, physiological disorders and remedies, IPM and IDM, production for exhibition purposes.

# **UNIT IV**

Flower forcing and year round flowering through physiological interventions, chemical regulation, environmental manipulation.

# **UNIT V**

Cut flower standards and grades, harvest indices, harvesting techniques, post-harvest handling, Pre-cooling, pulsing, packing, Storage & transportation, marketing, export potential, institutional support, Agri Export Zones.

# **Crops:**

Cut rose, cut chrysanthemum, carnation, gerbera, gladioli, tuberose, orchids, anthurium, aster, liliums, bird of paradise, heliconia, alstroemeria, alpinia, ornamental ginger, bromeliads, dahlia, gypsophilla, limonium, statice, stock, cut foliages and fillers.

# **Practical**

Botanical description of varieties, propagation techniques, mist chamber operation, training and pruning techniques, practices in manuring, drip and fertigation, foliar nutrition, growth regulator application, pinching, disbudding, staking, harvesting techniques, post-harvest handling, cold chain, project preparation for regionally important cut flowers, visit to commercial cut flower units and case study.

# FLA 503 PRODUCTION TECHNOLOGY FOR LOOSE FLOWERS 2+1 Objective

To impart basic knowledge about the importance and management of loose flowers grown in India.

# **Theory**

# **UNIT I**

Scope of loose flower trade, Significance in the domestic market/export, Varietal wealth and diversity, propagation, sexual and asexual propagation methods, propagation in mist chambers, nursery management, pro-tray nursery under shadenets, transplanting techniques

# **UNIT II**

Soil and climate requirements, field preparation, systems of planting, precision farming techniques.

# **UNIT III**

Water and nutrient management, weed management, rationing, training and pruning, pinching and disbudding, special horticultural practices, use of growth regulators, physiological disorders and remedies, IPM and IDM.

# **UNIT IV**

Flower forcing and year round flowering, production for special occasions through physiological interventions, chemical regulation.

# **UNIT V**

Harvest indices, harvesting techniques, post-harvest handling and grading, packing and storage, value addition, concrete and essential oil extraction, transportation and marketing, export potential, institutional support, Agri Export Zones.

**Crops:** Jasmine, scented rose, chrysanthemum, marigold, tuberose, crossandra, nerium, hibiscus, barleria, celosia, gomphrena, nontraditional flowers (Nyctanthes, Tabernaemontana, ixora, lotus, lilies, tecoma, champaka, pandanus).

#### **Practical**

Botanical description of species and varieties, propagation techniques, mist chamber operation, training and pruning techniques, practices in manuring, drip and fertigation, foliar nutrition, growth regulator application, pinching, disbudding, staking, harvesting techniques, post-harvest handling, storage and cold chain, project preparation for regionally important commercial loose flowers, visits to fields, essential oil extraction units and markets.

# **Suggested Readings**

# FLA 504 LANDSCAPING AND ORNAMENTAL GARDENING 2+1

# **Objective**

Familiarization with principles and practices of landscaping and ornamental gardening.

# **Theory**

# **UNIT I**

Scope and Importance of landscape gardening, principles of landscape gardening, Landscape designs, types of gardens, English, Mughal, Japanese, Persian, Spanish, Italian, Vanams, Buddha garden; Styles of garden, formal, informal and free style gardens.

#### UNIT II

Urban landscaping, Landscaping for specific situations, institutions, industries, residents, hospitals, roadsides, traffic islands, dam sites, IT parks, corporates.

#### **UNIT III**

Garden plant components, arboretum, shrubbery, fernery, palmatum, arches and pergolas, edges and hedges, climbers and creepers, bulbous plants, trees, cacti and succulents, herbs, annuals, flower borders and beds, ground covers, carpet beds, bamboo groves; Production technology for selected ornamental plants.

# **UNIT IV**

Lawns, Establishment and maintenance, special types of gardens, vertical garden, roof garden, bog garden, sunken garden, rock garden, clock garden, colour wheels, temple garden, sacred groves.

# **UNIT V**

Bio-aesthetic planning, eco-tourism, theme parks, indoor gardening, therapeutic gardening, non-plant components, water scaping, xeroscaping, hardscaping.

# **Practical**

Selection of ornamental plants, practices in preparing designs for home gardens, industrial gardens, institutional gardens, corporates, avenue planting, practices in planning and planting of special types of gardens, burlapping, lawn making, planting herbaceous and shrubbery borders, project preparation on landscaping for different situations, visit to parks and botanical gardens, case study on commercial landscape gardens.

# **Suggested Readings**

Bose TK, Maiti RG, Dhua RS & Das P. 1999. Floriculture and Landscaping. Naya Prokash.

Valsalakumari et al. 2008. Flowering Trees. New India Publ. Agency.

# FLA 505 PROTECTED FLORICULTURE 2+1

# **Objective**

Understanding the principles, theoretical aspects and developing skills in protected cultivation of flower crops.

# **Theory**

#### UNIT I

Prospects of protected floriculture in India; Types of protected structures – Greenhouses, polyhouses, shade houses, rain shelters etc., Designing and erection of protected structures; Low cost/Medium cost/High cost structures – economics of cultivation; Location specific designs; Structural components; Suitable flower crops for protected cultivation.

# **UNIT II**

Environment control – management and manipulation of temperature, light, humidity, air and CO<sub>2</sub>; Heating and cooling systems, ventilation, naturally ventilated greenhouses, fan and pad cooled greenhouses, light regulation.

# **UNIT III**

Containers and substrates, media, soil decontamination, layout of drip and fertigation system, water and nutrient management, weed management, physiological disorders, IPM and IDM.

# **UNIT IV**

Crop regulation by chemical methods and special horticultural practices (pinching, disbudding, deshooting, deblossoming, etc.); Staking and netting, Photoperiod regulation.

# **UNIT V**

Harvest indices, harvesting techniques, post-harvest handling techniques, Precooling, sorting, grading, packing, storage, quality standards.

#### **Practical**

Study of various protected structures, practices in design, layout and erection of different types of structures, practices in preparatory operations, soil decontamination techniques, practices in environmental control systems, practices in drip and fertigation techniques, special horticultural practices, determination of harvest indices and harvesting methods, postharvest handling, packing methods, project preparation, visit to commercial greenhouses.

# FLA 506 VALUE ADDITION IN FLOWERS 2+1

# **Objective**

To develop understanding of the scope and ways of value addition in flowers.

# Theory

#### UNIT I

Prospects of value addition, National and global scenario, production and exports, Women empowerment through value added products making, supply chain management.

# **UNIT II**

Types of value added products, value addition in loose flowers, garlands, *veni*, floats, floral decorations, value addition in cut flowers, flower arrangement, styles, Ikebana, morubana, free style, bouquets, button-holes, flower baskets, corsages, floral wreaths, garlands, etc.; Selection of containers and accessories for floral products and decorations.

# **UNIT III**

Dry flowers— Identification and selection of flowers and plant parts; Raw material procurement, preservation and storage; Techniques in dry flower making — Drying, bleaching, dyeing, embedding, pressing; Accessories; Designing and arrangement — dry flower baskets, bouquets, pot-pourri, wall hangings, button holes, greeting cards, wreaths; Packing and storage.

# **UNIT IV**

Concrete and essential oils; Selection of species and varieties (including non-conventional species), extraction methods, Packing and storage, Selection of species and varieties, Types of pigments, carotenoids, anthocyanin, chlorophyll, betalains; Significance of natural pigments,

# Extraction methods; Applications.

# **Practical**

Practices in preparation of bouquets, standard patterns of Western styles, button-holes, flower baskets, corsages, floral wreaths, Ikebana, garlands

with fresh flowers; Techniques in flower arrangement; Techniques in floral decoration; Identification of plants for dry flower making; Practices in dry flower making; Preparation of dry flower baskets, bouquets, pot-pourri, wall hangings, button holes, greeting cards, wreaths, etc.; Visit to florist shop and dry flower units, concrete and essential oil extraction units.

# **Suggested Readings**

Bhattacharjee SK. 2006. *Advances in Ornamental Horticulture*. Vols. I-VI. Pointer Publ.

Chadha KL.1995. *Advances in Horticulture*. Vol.XII. Malhotra Publ. House.

# FLA 507 TURFING AND TURF MANAGEMENT 2+1

# **Objective**

To develop understanding of the principles and management of turfing. **Theory** 

#### **UNIT I**

Prospects of landscape industry; History of landscape gardening, site selection, basic equirements, site evaluation, concepts of physical, chemical and biological properties of soil pertaining to turf grass establishment.

# UNIT II

Turf grasses - Types, species, varieties, hybrids; Selection of grasses for different locations; Grouping according to climatic requirement-Adaptation; Turfing for roof gardens.

# **UNIT III**

Preparatory operations; Growing media used for turf grasses – Turf establishment methods, seeding, sprigging/dibbling, plugging, sodding/turfing, turf plastering, hydro-seeding, astro-turfing.

# **UNIT IV**

Turf management – Irrigation, nutrition, special practices, aerating, rolling, soil top dressing, use of turf growth regulators (TGRs) and micronutrients, Turf mowing -- mowing equipments, techniques to minimize wear and compaction, weed control, biotic and abiotic stress management in turfs.

# **UNIT V**

Establishment and maintenance of turfs for playgrounds, viz. golf, football, hockey, cricket, tennis, rugby, etc.

# **Practical**

Identification of turf grasses, Preparatory operations in turf making, Practices in turf establishment, Layout of macro and micro irrigation systems, Water and nutrient management; Special practices — mowing, raking, rolling, soil top dressing, weed management; Biotic and abiotic stress management; Project preparation for turf establishment, visit to IT parks, model cricket and golf grounds, airports, corporates, Govt. organizations; Renovation of lawns; Turf economics.

# **Suggested Readings**

# FLA 508 CAD FOR OUTDOOR AND INDOORSCAPING 2+1

# **Objective**

To impart basic knowledge about the operation of Computer Aided Designing (CAD) in landscape garden designing.

# **Theory**

# **UNIT I**

Exposure to CAD (Computer Aided Designing) – Applications of CAD in landscape garden designing, 2D drawing by AUTOCAD, 3D drawing by ARCHICAD, 3D drawing by 3D MAX software, Creating legends for plant and non-plant components, Basics of Photoshop software in garden designing.

# **UNIT II**

2D drawing methods, AUTOCAD Basics, Coordinate systems in AUTOCAD LT 2007, Point picking methods, Toolbars and Icons, File handling functions, Modifying tools, Modifying comments, Isometric drawings, Drafting objects.

# **UNIT III**

Using patterns in AUTOCAD drawing, Dimension concepts, Hyperlinking, Script making, Using productivity tools, e-transmit file, making sample drawing for outdoor and indoor garden by AUTOCAD 2D Drawing techniques, Drawing web format design, Making layout.

# **UNIT IV**

3D drawing methods, ARCHICAD file system, Tools and Infobox, modification tools, structural elements, GDL objects (Grid Dimensional Linking), Creation of garden components through ARCHICAD.

# **UNIT V**

ARCHICAD organization tools, Dimensioning and detailing of designs, Attribute settings of components, Visualization tools for landscape preview, Data management, plotting and accessories for designing, Inserting picture using photoshop, Making sample drawing for outdoor and indoor gardens.

# **Practical**

Identification of various software for CAD, Practices in point picking methods, Using tool bars and icons, Using modifying tools and modifying comments, Isometric drawings, Using productivity tools, Drawing designs by AUTOCAD for home garden, institutional garden and special types of garden, Using tools and info-box for 3D drawing, Creation of garden components with ARCHICAD, Organization, dimensioning, detailing and visualization tools with ARCHICAD, Using Photoshop package for 3D picture insertion, Drawing designs with ARCHICAD for home garden, interior garden designing, IT parks, Corporates, Theme parks and Ecotourism spots.

# FLA 601 ADVANCES IN BREEDING OF FLOWER CROPS 2+1

# **Objective**

To update knowledge on the recent research trends in the field of breeding of flower crops with special emphasis on crops grown in India.

# **Theory**

#### **UNIT I**

Origin and evolution of varieties, distribution, Genetic resources, genetic divergence, Plant introduction, selection and domestication, Inheritance of important characters, Genetic mechanisms associated with flower colour and flower size, doubleness, fragrance and post-harvest life, Plant Variety Protection Act.

# **UNIT II**

Specific objectives of breeding in flower crops, Methods of breeding suited to seed and vegetatively propagated flower crops, Introduction, selection, polyploidy and mutation breeding in the evolution of new varieties, Exploitation of heterosis, utilization of male sterility-Incompatibility problems. *In Vitro* breeding.

#### **UNIT III**

Breeding for resistance to pests, diseases, nematodes and other biotic and abiotic stresses in flower crops.

# **UNIT IV**

Specific breeding problems and achievements made in rose, jasmine, chrysanthemum, marigold, tuberose, crossandra, carnation, gerbera, gladioli, orchids and anthurium.

# **UNIT V**

Specific breeding problems and achievements made in aster, petunia, liliums, heliconia, bird of paradise, hibiscus and bougainvillea.

# **Practical**

Description of crops and cultivars; Cataloguing of species and cultivars, floral biology, selfing and crossing, evaluation of hybrid progenies; Induction of mutants; Physical and chemical mutagens; Induction of polyploidy; Screening of plants for biotic and abiotic stresses and environmental pollution; *in-vitro* breeding in flower crops.

# **Suggested Readings**

Choudhary RC.1993. *Introduction to Plant Breeding*. Oxford & IBH. Singh BD.1990. *Plant Breeding*. Kalyani.

# FLA 602 ADVANCES IN FLOWER PRODUCTION TECHNOLOGY 2+1

# **Objective**

To keep abreast with latest developments and trends in production technology of flower crops.

# **Theory**

# **UNIT I**

Commercial flower production; Scope and importance; Global Scenario in cut flower production and trade, varietal wealth and diversity; Soil and Environment; Special characteristics and requirements; cut flower, loose flowers, dry flowers and floral oil trade.

# **UNIT II**

Propagation and multiplication; IPR issues related to propagation of materials; Greenhouse management; Soil/media decontamination techniques; Micro-irrigation; nutrition and fertigation; slow release fertilizers and bio-fertilizers; influence of environmental parameters, light, temperature, moisture, humidity and CO<sub>2</sub> on growth and flowering; regulation for quality flowers.

# **UNIT III**

Flower forcing and year-round flowering through physiological interventions; Chemical regulation; Environmental manipulation; Harvest indices; Harvesting techniques; Post-harvest handling; Pre-cooling, pulsing, packing, marketing; Export potential; Agri Export Zones.

# **UNIT IV**

Crop specific practices – rose, anthurium, orchids, carnation, gladioli, gerbera, liliums, heliconia, bird of paradise, *Jasminum* sp., marigold, tuberose, crossandra, spider lily, gaillardia, chrysanthemum

# **UNIT V**

Floral oil industry, floral concrete production, extraction methods, recent advances.

# **Practical**

Varietal wealth in flower crops; Greenhouse management; Soil decontamination techniques; Microirrigation; Nutrition and fertigation. Special practices- Pinching, netting, disbudding, defoliation and chemical pruning; Photoperiodic and chemical induction of flowering; Assessing harvest indices; Post-harvest handling; Tissue analysis; Preparation of floral decoratives; Extraction of floral concrete and oils; case studies; visit to commercial cut flower units.

# **Suggested Readings**

# FLA 603 ADVANCES IN PROTECTED AND PRECISION FLORICULTURE 1+1

# **Objective**

Appraisal on the advances in protected and precision farming of flower crops.

# **Theory**

#### UNIT I

Prospects of protected floriculture in India, growing structures, basic considerations in establishment and operation of green houses, functioning and maintenance.

# **UNIT II**

Environmental control systems in greenhouse, containers, substrate culture, soil decontamination techniques.

# **UNIT III**

Water and nutrient management, crop regulation, special horticultural practices under protected cultivation of rose, chrysanthemum, carnation, orchids, anthurium, gerbera, liliums, heliconia, cut foliage; Harvest indices – harvesting, PH handling, marketing, export.

# **UNIT IV**

Precision floriculture, Principles and concepts, Enabling technologies of precision farming, GPS, GIS, Remote sensing, sensors.

# **UNIT V**

Variability management in precision farming, mapping, variable rate technology, precision equipments, computers and robotics in precision farming, post-harvest process management in floriculture using precision farming.

#### **Practical**

Growing structures, basic considerations in establishment and operation of greenhouses, Environmental control systems in greenhouse, containers, substrate culture, soil decontamination techniques, Crop regulation, special horticultural practices under protected cultivation, precision equipments, computers and robotics in precision farming, post-harvest process management in floriculture using precision farming.

# **Suggested Readings**

# FLA 604 ADVANCES IN LANDSCAPE ARCHITECTURE 1+2

# **Objective**

To update knowledge on the recent trends in the field of landscape architecture and developing practical skills.

# **Theory**

# **UNIT I**

Commercial landscape gardening- History, Plant identification and ecology, Materials of garden design, Design making by different garden styles and types, different basic design elements land, plant material, water, buildings, pavements, etc.

# **UNIT II**

Expenses to model landscaping units of all category, Creativity and communication skills for landscape architect, Way of designing a commercial landscape project.

# **UNIT III**

Assessing site and plants adaptability for different locations, Landscape engineering (Topographical) survey and designing concept), special techniques in garden landscaping (Burlaping, waterscaping, hardscaping, lawn making, topiary styles specializing, bioaesthetic planning).

# **UNIT IV**

Preparation and drawing of site plan, Learning the basics in computer aided design (CAD) for developing a garden landscape plan, Handling soft landscape materials (AUTOCAD & ARCHICAD), GIS as a tool for spatial designing.

# **UNIT V**

Contemporary landscaping, Environmental landscaping, Industrial and institutional landscaping, Public and private garden making, play ground landscaping, Case study with the successful landscapist, Budget / Project cost estimating, Execution strategies, Assessing a successful design in site.

#### **Practical**

Commercial landscaping, Plant identification, Materials of garden design, Design making by different garden styles and types. Way of designing a commercial landscape project, visit to model ornamental nursery. Assessing site and plants adaptability for different locations, Landscape engineering (Topographical survey and designing concept), special techniques in garden landscaping (Burlaping, waterscaping, hardscaping, lawn making, topiary styles specializing, bioaesthetic planning). Preparation and drawing of site plan, Learning the basics in computer aided design (CAD) for developing a garden landscape plan, Handling soft landscape materials (AUTOCAD & ARCHICAD), GIS as a tool for spatial designing. Contemporary landscaping, Environmental landscaping, Industrial and institutional landscaping, Public and private garden making, play ground landscaping, Case study with the successful landscapist, Budget/Project cost estimating, Execution.

Nambisan KMP. 1992. Design Elements of Landscape Gardening. Oxford & IBH.

#### FLA 605 ADVANCES IN BIOCHEMISTRY AND BIOTECHNOLOGY OF FLOWERS

2+1

# **Objective**

Appraisal on the advances in biochemistry of flowers and application of biotechnology in flower crops.

# **Theory**

# UNIT I

Biochemistry of flowers: Principle involved in the formation of pigments – chlorophyll, xanthophyll, carotenoids, flavonoids and anthocyanins. Chemistry and importance of secondary metabolites in rose, jasmine, marigold, tuberose, carnation, orchids, liliums and bougainvillea.

Biochemistry and utilization commercial products (select items).

# **UNIT II**

Recent trends- Extraction of biocolours and their value addition, uses in food and textile industries. Biochemistry of post harvest management of cut flowers.

# **UNIT III**

Biotechnology – tools techniques and role in floriculture industry, physical factors and chemical factors influencing the growth and development of plant cell, tissue and organs, cyto-differentiation, organogenesis, somatic embryogenesis.

# **UNIT IV**

In vitro lines for biotic and abiotic stress – Meristem culture for disease elimination, production of haploids through anther and pollen culture – embryo and ovule culture, micrografting, wide hybridization and embryo rescue techniques, construction of somatic hybrids and cybrids, regeneration and characterization of hybrids and cybrids, in vitro pollination and fertilization, hardening media, techniques and establishment of tissue culture plants in the primary and secondary nursery.

# **UNIT V**

Somoclonal variation and its applications – variability induction through *in vitro* mutation, development of cell suspension cultures, types and techniques, *in vitro* production of secondary metabolites, role of bioreactors in production of secondary metabolites, quantification and quality analysis of secondary metabolites using HPLC, *in vitro* conservation and cryo-preservation techniques.

# **UNIT VI**

Gene cloning, genetic engineering: vectors and methods of transformation – electroporation, particle bombardment, *Agrobacterium* mediated, transgenic plants in flower crops, medicinal and aromatic crops, isolation of DNA, RNA, quantification, Polymerase Chain Reaction for amplification; AGE & PAGE techniques; identification of molecular markers.

# **UNIT VII**

Construction of c- DNA library, DNA fingerprinting technique in economic flower crop varieties, molecular approaches to control ethylene response, improving shelf life, improving resistance for environmental stress, approaches to improve flower development, pigment production, secondary metabolite production, post harvest biotechnology of flowers, ornamental plants, achievements of bio-technology in flower crops.

# **Practical**

Extraction of flower pigments – xanthophylls, carotenoids and anthocyanins. Plant nutrient stock- growth regulators- media preparation and sterilization- *In vitro* seed germination- callus culture and organ culture- Cell suspension culture – cell plating and regeneration- clonal propagation through Meristem culture, induction of multiple shoots-

Anther- Pollen- Ovule and Embryo culture- Synthetic seed production, *in vitro* mutation induction, *in vitro* rooting — hardening at primary and secondary nurseries, Project preparation for establishment of low, medium and high cost tissue culture laboratories, DNA isolation from economic flower crop varieties — Quantification and amplification, DNA and Protein profiling — molecular markers for economic flower crops, restriction enzymes, vectors for cloning and particle bombardment, DNA fingerprinting of flower crop varieties.

# PLANTATION, SPICES, MEDICINAL & AROMATIC CROPS Course Contents

# PSMA 501 PRODUCTION OF PLANTATION CROPS 2+1

# **Objective**

To impart basic knowledge about the importance and production technology of plantation crops grown in India.

## **Theory**

Role of plantation crops in national economy, export potential, IPR issues, clean development mechanism, classification and varietal wealth. Plant multiplication including *in vitro* multiplication, systems of cultivation, multitier cropping, photosynthetic efficiencies of crops at different tiers, rainfall, humidity, temperature, light and soil pH on crop growth and productivity, high density planting, nutritional requirements, physiological disorders, role of growth regulators and macro and micro nutrients, water requirements, fertigation, moisture conservation, shade regulation, weed management, training and pruning, crop regulation, maturity indices, harvesting. Cost benefit analysis, organic farming, management of drought, precision farming.

# **Crops**

**UNIT I:** Coffee and tea

**UNIT II:** Cashew and cocoa

**UNIT III:** Rubber, palmyrah and oil palm

**UNIT IV:** Coconut and arecanut **UNIT V:** Wattle and betel vine

#### **Practical**

Description of botanical and varietal features, selection of mother palms and seedlings in coconut and arecanut, soil test crop response studies and manuring practices, pruning and training, maturity standards, harvesting, Project preparation for establishing plantations, Visit to plantations.

#### PSMA 502 PRODUCTION TECHNOLOGY OF SPICE CROPS 2+1

### **Objective**

To impart basic knowledge about the importance and production technology of spices grown in India.

#### Theory

Introduction, importance of spice crops-historical accent, present status - national and international, future prospects, botany and taxonomy, climatic and soil requirements, commercial varieties/hybrids, site selection, layout, sowing/planting times and methods, seed rate and seed treatment, nutritional and irrigation requirements, intercropping, mixed cropping, intercultural operations, weed control, mulching, physiological disorders, harvesting, post harvest management, plant protection measures and seed planting material and micro-propagation, precision farming, organic resource management, organic certification, quality control, pharmaceutical significance and protected cultivation of:

### UNIT I

Black pepper, cardamom

#### UNIT II

Clove, cinnamon and nutmeg, allspice

### **UNIT III**

Turmeric, ginger and garlic

#### **UNIT IV**

Coriander, fenugreek, cumin, fennel, ajowain, dill, celery

## **UNIT V**

Tamarind, garcinia and vanilla

#### **Practical**

Identification of seeds and plants, botanical description of plant; preparation of herbarium, propagation, nursery raising, field layout and method of planting, cultural practices, harvesting, drying, storage, packaging and processing, value addition; short term experiments on spice crops.

### **Suggested Readings**

# PSMA 503 PRODUCTION TECHNOLOGY FOR MEDICINAL AND AROMATIC CROPS 2+1

# **Objective**

To impart comprehensive knowledge about the production technology of medicinal and aromatic crops.

# **Theory**

#### **UNIT I**

History of *Ayurveda*, *Siddha* and *Unani* medicines, present status and future scope, Herbal industry, WTO scenario, Export and import status, Indian system of medicine, Indigenous Traditional Knowledge, IPR issues, Classification of medicinal crops, Systems of cultivation, Organic production, Role of institutions and NGO's in production and marketing, GAP in medicinal crop production. Role of importance of spices as medicines.

#### **UNIT II**

Production technology for Senna, Periwinkle, Coleus, Aswagandha, Glory lily, Sarpagandha, *Dioscorea* sp., *Aloe vera*, *Phyllanthus amarus*, *Andrographis paniculata*, *Phyllanthus emblica (aonla)*, *Terminellia chebula (Harde) and Terminellia bellirica(Baheda)*. *Piper longum (pippali)*,

#### **UNIT III**

Production technology for Medicinal solanum, Isabgol, Poppy, Safed musli, *Stevia rebaudiana*, *Mucuna pruriens*, *Ocimum sp*.

#### **UNIT IV**

Post harvest handling – Drying, Processing, Grading, Packing and Storage, processing and value addition; GMP and Quality standards in herbal products.

#### **UNIT V**

Influence of biotic and abiotic factors on the production of secondary metabolites, Regulations for herbal raw materials, Phytochemical extraction techniques.

### **UNIT VI**

Importance and classification, Aromatic industry, WTO scenario, Export and import status, Indian perfumery industry, History, Advancements in perfume industry. Information on aroma therapy.

### **UNIT VII**

Production technology for palmarosa, lemongrass, citronella, vetiver, geranium, artemisia, mentha, ocimum, eucalyptus, rosemary, thyme, patchouli, lavender, marjoram, oreganum. Rose, tuberose and jasmine.

### **UNIT VIII**

Post-harvest handling, Distillation methods, advanced methods, Solvent extraction process, steam distillation, Perfumes from non-traditional plants, Quality analysis, Value addition, Aroma chemicals, quality standards and regulations, problems in oil extraction.

# **UNIT IX**

Institutional support and international promotion of essential oil and perfumery products.

#### **Practical**

Botanical description, Propagation techniques, Maturity standards, Digital documentation, Extraction of secondary metabolites, Project preparation for commercially important medicinal crops, Visit to medicinal crop fields, Visit to herbal extraction units. Extraction of Essential oils, Project preparation for commercially important Aromatic crops, Visit to distillation and value addition units – Visit to CIMAP.

#### PSMA 504 BREEDING OF PLANTATION CROPS AND SPICES 2+1

#### **Objective**

To impart comprehensive knowledge about the principles and practices of breeding of plantation crops and spices.

#### **Theory**

Species and cultivars, cytogenetics, survey, collection, conservation and evaluation, blossom biology, breeding objectives, approaches for crop improvement, introduction, selection, hybridization, mutation breeding, polyploid breeding, improvement of quality traits, resistance breeding for biotic and abiotic stresses, molecular aided breeding and biotechnological approaches, marker-assisted selection, bioinformatics, IPR issues, achievements and future thrusts.

#### **Crops**

**UNIT I:** Coffee and tea

UNIT II: Cashew and cocoa

UNIT III: Rubber, palmyrah and oil palm

UNIT IV: Coconut and arecanut

**UNIT V:** Black pepper and cardamom

**UNIT VI:** Ginger and turmeric

UNIT VII: Fenugreek, coriander, fennel, celery and ajwoain

**UNIT VIII:** Nutmeg, cinnamon, clove and allspice

#### **Practical**

Characterization and evaluation of germplasm accessions, Blossom biology, studies on pollen behaviour, practices in hybridization, ploidy breeding, mutation breeding, evaluation of biometrical traits and quality traits, screening for biotic and abiotic stresses, haploid culture, protoplast culture and fusion- induction of somaclonal variation and screening the variants. Identification and familiarization of spices; floral biology anthesis; fruit set; selfing and crossing techniques; description of varieties. Salient features of improved varieties and cultivars from public and private sector, bioinformatics, visit to radiotracer laboratory, national institutes for plantation crops and plant genetic resource centers, genetic transformation in plantation crops for resistance to biotic stress/quality improvement etc.

#### PSMA 505 BREEDING OF MEDICINAL AND AROMATIC CROPS

### **Objective**

To impart comprehensive knowledge about the principles and practices of breeding of plantation crops and spices.

### **Theory**

### **UNIT I**

Plant bio-diversity, conservation of germplasm, IPR issues, Major objectives of breeding of Medicinal and Aromatic Crops, Scope for introduction; cytogenetic background of important Medicinal and Aromatic Crops; Scope for improvement of Medicinal and Aromatic Crops through

selection, intra and interspecific hybridization, induced autotetraploidy, mutation breeding and biotechnological approaches.

#### **UNIT II**

Breeding for yield and quality improvement in medicinal plants, Breeding for high herbage yield, essential oil and quality components, secondary metabolites in medicinal and aromatic crops; Genetics of active principles and assay techniques useful in evaluation of breeder's material. Breeding problems in seed and vegetatively propagated medicinal and aromatic crops.

#### **UNIT III**

Achievements and prospects in breeding of medicinal crops, viz. Cassia angustifolia, Catharanthus roseus, Gloriosa superba, Coleus forskohlii, Stevia, Withania somnifera, Papaver somniferum, Plantago ovata, Dioscorea sp.

#### **UNIT IV**

Prospects in breeding of medicinal crops, viz. Chlorophytum sp, Rauvolfia serpentina, Aloe vera, Ocimum sp, Phyllanthus amarus, Solanum sp.

#### **UNIT V**

Prospects in breeding of aromatic crops viz., Geranium, vettiver, Lemon grass, Palmarosa, citronella, Rosemary, Patchouli, Eucalyptus, Artemisia and Mint.

#### **Practical**

Description of Botanical features, Cataloguing of cultivars, varieties and species in medicinal and aromatic crops, Floral Biology, Selfing and crossing, Evaluation of hybrid progenies, Induction of economic mutants, High alkaloid and high essential oil mutants, evolution of mutants through physical and chemical mutagens, Introduction of polyploidy, Screening of plants for biotic and abiotic stress and environmental pollution, *in-vitro* breeding in medicinal and aromatic crops.

# **Suggested Readings**

# PSMA 506 PROCESSING OF PLANTATION CROPS, SPICES MEDICINAL AND AROMATIC PLANTS

# **Objective**

To facilitate deeper understanding on principles and practices of post harvest technology of plantation crops, spices, medicinal and aromatic crops.

# **Theory**

#### UNIT I

Commercial uses of spices and plantation crops. Processing of major spices - cardamom, black pepper, ginger, turmeric, chilli and paprika, vanilla, cinnamon, clove, nutmeg, allspice, coriander, fenugreek, curry leaf. Extraction of oleoresin and essential oils.

#### UNIT II

Processing of produce from plantation crops, *viz*. coconut, arecanut, cashewnut, oil palm, palmyrah, date palm, cocoa, tea, coffee, rubber etc.

### **UNIT III**

Processing of medicinal plants— dioscorea, gloriosa, stevia, coleus, ashwagandha, tulsi, isabgol, safed musli, senna, aloe, catharanthus, etc. Different methods of drying and storage. Microbial contamination of stored product. Influence of temperature and time combination on active principles.

# **UNIT IV**

Extraction and analysis of active principles using TLC / HPLC / GC. Distillation, solvent extraction from aromatic plants— davana, mint, rosemary, rose, citronella, lavender, jasmine, etc. Study of aroma compounds and value addition. Nano-processing technology in medicinal and aromatic plants.

#### **Practical**

Study of processing of different spices and plantation crops. Study of processing of medicinal plants, their drying and storage. Extraction of active ingredients from different spices and herbs using TLC, HPLC, GC/CG-MS technology. Distillation, solvent extraction from aromatic plants – davana, mint, rosemary, citronella, lavender, jasmine, etc. Identification of different odoriferous factors in essential oil with GLC/GCMS. Physico-chemical and sensory evaluation of oils and oleoresin. Value added products from spices and plantation crops.

# PSMA 507 ORGANIC SPICE AND PLANTATION CROP PRODUCTION TECHNOLOGY

2+1

#### **Objective**

To educate principles, concepts and production of organic farming in spice and plantation crops.

#### Theory

#### **UNIT I**

Importance, principles, perspective, concept and component of organic production of spice and plantation crops.

#### **UNIT II**

Organic production of spice crops and plantation crops, *viz.* pepper, cardamom, turmeric, ginger, cumin, vanilla, coconut, coffea, cocoa, tea, arecanut.

#### **UNIT III**

Managing soil fertility, pests and diseases and weed problems in organic farming system; crop rotation in organic horticulture; processing and quality control for organic foods.

## **UNIT IV**

Methods for enhancing soil fertility, mulching, raising green manure crops. Indigenous methods of compost, Panchagavvya, Biodynamics, preparation etc.; Pest and disease management in organic farming; ITK's in organic farming. Role of botanicals and bio-control agents.

#### **UNIT V**

GAP and GMP- Certification of organic products; organic production and export - opportunity and challenges.

#### **Practical**

Method of preparation of compost, vermicomposting, biofertilizers, soil solarization, bio pesticides in horticulture, green manuring, mycorrhizae and organic crop production, waste management, organic soil amendment for root disease, weed management in organic horticulture. Visit to organic fields and marketing centers.

#### PSMA 508 UNDEREXPLOITED MEDICINAL AND AROMATIC CROPS 1+1

## **Objective**

To facilitate understanding on the importance, conservation and cultivation of medicinal and aromatic crops.

# **Theory**

#### **UNIT I**

Introduction, importance, present status and future prospects, origin, distribution, species, varieties, economic parts and their uses in different diseases, Biodiversity and conservation, RET (Rare, Endangered and Threatened) and MPCAs (Medicinal Plants Conservation Areas).

#### **UNIT II**

Underutilized species – importance, traditional usage, ISM, TCM, Functional foods.

# **UNIT III**

Production technology of underutilized medicinal crops— *Morinda* citrifolia, Caesalpinia sappan, Caralluma, Terminalia chebula, Strychnos nuxvomica, Solanum trilobatum, Physalis, Aegle marmelos, Alpinia sp., Anthocephalus kadamba, Costus.

#### **UNIT IV**

Production technology of underutilized aromatic crops— Curcuma aromatica, C. caesia, Coleus aromaticus, Ocimum kilimanjaricum, Bursera.

### **UNIT V**

National and international conservation network, IPR issues, Promotion of under utilized species, Processing and value addition, Marketing.

#### **Practical**

Case studies.

# PSMA 601 ADVANCES IN PRODUCTION OF PLANTATION CROPS 2+1

# **Objective**

To keep abreast with latest developments and trends in production technology of plantation crops.

# **Theory**

Plantation crops – area and production, export potential - varietal wealth and appraisal on the crop improvement in plantation crops. Mass multiplication techniques, High density planting, systems of cultivation,multitier cropping, companion cropping, studies of on canopy and root management, photosynthetic efficiencies of crops at different tiers, Biotic and abiotic factors on growth and productivity, nutritional requirements, role of macro and micro nutrients, Nutrient deficiency symptoms, growth regulators, water requirement, fertigation, soil and

moisture conservation practices, Drought management, permanent vegetation management, Basin management, training and pruning, maturity indices, harvesting, curing, processing and value addition, grading, packing and storage, role of commodity boards in plantation crop development, Production of plantation crops through GAP, GMP, HACCP.

# **Crops**

**UNIT I:** Coffee and tea

UNIT II: Cashew and cocoa

**UNIT III:** Rubber, palmyrah and oil palm

**UNIT IV:** Coconut and arecanut **UNIT V:** Wattle and betelvine

#### **Practical**

Description of botanical and varietal features-selection of mother palms and elite clones, Clonal fidelity testing, nursery techniques and propagation methods, High density planting, training and pruning practices, fertigation and foliar nutrition, shade regulation, maturity standards, harvesting, curing, processing and grading, project preparation for establishing new plantations, visit to plantation gardens, commodity boards and plantation based industries.

#### PSMA 602 ADVANCES IN SPICE PRODUCTION

2+1

#### **Objective**

To educate advances in production technology of spice crops.

#### **Theory**

Spices- current status on area and production, state, national and global scenario of spices, global trade, problems encountered in spices productivity, systems of cultivation, varieties, soil and climate, propagation techniques and nursery management, planting systems and methods, cropping pattern, permanent floor management concepts in mulching and weed management, canopy and root studies under different spice-based cropping systems, shade and basin management, INM practices, irrigation and fertigation techniques, chemical regulation of crop productivity, IPM, clean cultivation strategies, harvesting, Post-harvest and quality management for value added spices, quality standards, GAP and GMP for spices production, quality control and certification. Protected cultivation of high value spice crops. Value addition and byproduct utilization. Pricision farming and organic farming in spice crops. Commodity Boards in spices development.

**UNIT I:** Pepper and cardamom

UNIT II: Nutmeg, clove, cinnamon and allspice

**UNIT III:** Turmeric, ginger, garcinia, tamarind and garlic **UNIT IV:** Coriander, fenugreek, fennel, cumin and vanilla

**UNIT V:** Paprika and important herbal spices

# PSMA 603 ADVANCES IN MEDICINAL AND AROMATIC CROP PRODUCTION TECHNOLOGY 2+1

# **Objective**

To keep abreast with latest developments and trends in production technology of medicinal and aromatic crops.

#### **Theory**

#### UNIT I

Genetic biodiversity of medicinal plants, Conservation networks, Global initiatives on medicinal plants conservation and development, World history on usage of medicinal plants, Preference to natural products, Advanced research in biomedicines, Nutraceuticals and natural drugs, American, European and Asian legislations on plant drugs, Intellectual Property Rights, Patents.

# UNIT II

Indian traditional wisdom and Heritage- Indian herbal wealth, Documentations, Databases, Scientific validation, Production Problems of Medicinal and Aromatic plants, Export and import status. WTO scenario - Principles and guidelines for GAP, GCP and GMP in medicinal crops.

### **UNIT III**

Climate, Soil and substrate culture, Improved varieties, Organic production, Nutrition and irrigation requirements, inter culture, mulching, Weed control, Maturity indices and Harvesting, Post-harvest handling, Drying, Processing, Grading, Packing and Storage, Quality standards in medicinal plants, Biotechnological approaches for advances in phyto-chemical extraction technologies, Separation of Bio-molecules, Distillation methods, Essential oil extraction and value addition in aromatic plants, Phytochemicals and drug development.

#### **UNIT IV**

Medicinal crops: Coleus forskohlii, Glory liliy, Senna, Periwinkle, Stevia rebaudiana, Aswagandha, Sarpagandha, Aloe vera, Dioscorea sp, Phyllanthus amarus, Andrographis paniculata, Medicinal solanum, Isabgol, Poppy, Digitalis sp, Commiphora sp, Ipecac, Henbane, Ocimum sp., Centella, Bacopa, Saraca indica and Bael. Alkaloidal properties of above plants.

### **UNIT V**

Aromatic crops: Palmarosa, Lemongrass, citronella, vetiver, Geranium, Artemisia, Mentha, Ocimum, Eucalyptus, Rosemary, Thyme, patchouli.

#### **Practical**

Identification and documentation- propagation in medicinal crops, Maturity standards, Harvesting and Drying techniques, Processing and grading, Analysis of bio-molecules, Extraction of secondary metabolites, identification and characterization of - secondary metabolites, Essential oils, Visit to commercial medicinal plants field, Visit to GMP phytochemical extraction and value addition unit.

#### PSMA 604 ADVANCES IN BREEDING OF PLANTATION CROPS AND SPICES

2+1

### **Objective**

To update knowledge on the recent research trends in the field of breeding of plantation crops and spices.

## **Theory**

Evolutionary mechanisms, adaptation and domestication, genetic resources, genetic divergence, cytogenetics, variations and natural selection, types of pollination and fertilization mechanisms, sterility and incompatibility system, recent advances in crop improvement efforts, introduction and selection, chimeras, clonal selections, intergeneric, interspecific and intervarietal hybridization, heterosis breeding, mutation and polyploidy breeding, resistance breeding to biotic and abiotic stresses, breeding for improving quality, genetics of important traits and their inheritance pattern, molecular and transgenic approaches and other biotechnological tools in improvement of selected spice and plantation crops.

### **Crops**

UNIT I: Coffee and tea
UNIT II: Cashew and cocoa

**UNIT III:** Rubber, palmyrah and oil palm

**UNIT IV:** Coconut and arecanut **UNIT V:** Pepper and cardamom

UNIT VI: Nutmeg, clove, cinnamon and allspice

**UNIT VII:** Turmeric, ginger, garcinia, tamarind and garlic **UNIT VIII:** Coriander, fenugreek, fennel, cumin and vanilla

#### **Practical**

Description and cataloguing of germplasm, pollen viability tests, pollen germination, survey and clonal selection, screening techniques for abiotic stresses, screening and rating for pest, disease and stress resistance in inbreds and hybrids, estimation of quality and processing characters for quality improvement, use of mutagenes and colchicine for inducing mutation and ploidy changes, practices in different methods of breeding and *in vitro* breeding techniques.

# PSMA 605 ADVANCES IN BREEDING OF MEDICINAL AND AROMATIC CROPS 2+1

### **Objective**

To update knowledge on the recent research trends in the field of breeding of medicinal and aromatic crops with special emphasis on tropical, subtropical and temperate crops grown in India.

### **Theory**

#### UNIT I

Origin and evolution of varieties, distribution- Genetic resources, genetic divergence, Plant introduction, selection and domestication - Inheritance of important characters, Genetic mechanisms associated with alkaloids and secondary metabolites.

#### **UNIT II**

Methods of breeding suited to seed and vegetative propagated crops. Polyploidy and mutation breeding in the evolution of new varieties, Exploitation of heterosis, utilization of male sterility. Breeding for resistance to pests, diseases, nematodes in medicinal and aromatic crops.

#### **UNIT III**

Specific breeding objectives in medicinal and aromatic crops, Genetic bio diversity, Breeding problems and improvements in Senna, Periwinkle, Aswagandha, Isabgol, Sarpagandha, Poppy, Glory lily, *Coleus, Mucuna and Ocimum*, Centella, Bacopa, Dioscorea, Solanum, Andrographis, *Aloe vera*, Phyllanthus, Eucalyptus, Bael, Cinchona.

#### **UNIT IV**

Specific breeding objectives in medicinal and aromatic crops, Genetic bio diversity, Breeding problems and improvements in Henbane aromatic grasses, Geranium, Patchouli, Artemisia, Rosemary, Thyme, Sage, Marjoram, Fever few.

# UNIT V

Biotechnological approaches for crop improvement of medicinal and aromatic crops.

#### **Practical**

Description of crops and cultivars, Cataloguing of species and cultivars, floral biology, selfing and crossing, evaluation of hybrid progenies, Induction of economic, colour mutants, Increased alkaloid content in medicinal crops, high essential oil content in aromatic plants, Physical and chemical mutagens, Induction of polyploidy, Screening of plants for biotic and abiotic stresses and environmental pollution, *in-vitro* breeding in flower crops, medicinal and aromatic crops.

### PSMA 606 BIOTECHNOLOGY IN PLANTATION CROPS AND SPICES 1+1

# **Objective**

To teach advances in biotechnology for improvement of plantation crops and spices.

#### **Theory**

**Crops**: Coconut, oil palm, coffee, tea, cocoa, pepper, cardamom, turmeric, ginger, vanilla

#### **UNIT I**

*In vitro* culture methods and molecular approaches for crop improvement in plantation crops and spices, production of haploids, disease elimination in horticultural crops, micro grafting; somoclones and identification of somaclonal variants, *in vitro* techniques to overcome fertilization barriers, *in vitro* production of secondary metabolites.

# **UNIT II**

Protoplast culture and fusion, construction, identification and characterization of somatic hybrids and cybrids, wide hybridization, embryo rescue of recalcitrant species, *in vitro* conservation of spices and plantation crops.

### **UNIT III**

*In vitro* mutation for biotic and abiotic stresses, recombinant DNA methodology, gene transfer methods, tools, methods, applications of rDNA technology.

#### **UNIT IV**

Quality improvement; improvement for biotic and abiotic stresses; transgenic plants.

### **UNIT V**

Role of molecular markers in characterization of transgenic crops, fingerprinting of cultivars etc., achievements, problems and future thrusts in horticultural biotechnology.

#### **Practical**

Establishment of axenic explants, callus initiation and multiplication; production of suspension culture, cell and protoplast culture, fusion, regeneration and identification of somatic hybrids and cybrids, Identification of embryonic and non-embryonic calli, development of cell lines; *in vitro* mutant selection for biotic and abiotic stresses, *In vitro* production and characterization of secondary metabolites, isolated microspore culture, isolation and amplification of DNA, gene transfer methods; molecular characterization of transgenic plants.

# PSMA 607 POST-HARVEST PROCESSING AND EXTRACTION IN MEDICINAL AND AROMATIC PLANTS 2+1

# **Objective**

To teach advances in post harvest processing and extraction of economically important medicinal and aromatic crops.

### **Theory**

#### **UNIT I**

Post-harvest handling of plant material, preparation of plant material for packaging and extraction. Methods of extraction of secondary metabolites from medicinal crops like sarpagandha, steroid-bearing solanums, ashwagandha, henbane, periwinkle, senna, costus, coleus, etc.

#### UNIT II

Procedures and equipments used for extraction of active principles. Principles and practices of different types of chromatographs - paper, thin layer, column, gas and high performance liquid chromatography and mass spectroscopy. Preservation of plant extracts and their trade mechanisms.

#### **UNIT III**

Harvesting, drying, handling and preparation of different aromatic crops - jasmine, tuberose, oil-bearing rose, scented geranium, patchouli, davana, mints, basils, etc., for essential oil extraction.

#### **UNIT IV**

Principles and practices of different types of extraction - distillation, solvent extraction, supercritical fluid extraction, etc. Fine flavour and perfume extraction. Qualitative determination of essential oils. *In vitro* production of biomass and organic extraction of oils. Quality analysis and characterization through chromatographs.

#### **UNIT V**

Commercial uses of essential oils, aromatherapy, etc. Commercial utilization of spent material. Storage of essential oils.

#### **Practical**

Identification of different economic parts of medicinal and aromatic crops. Preparation of plant material for extraction. Study of different extraction methods. Study of solvents used in extraction of concrete and absolutes. Extraction of crude drugs and essential oils from different medicinal and aromatic crops respectively. Handling of different chromatographs. Quality analysis of essential oils - both physical and chemical, determination of phenol values, acid values, alcohol values, etc. Sensory evaluation of essential oils. Storage studies in essential oils. Visit to commercial extraction and product development units.

# PSMA 608 ENVIRONMENTAL HORTICULTURE 2+1

# **Objective**

To teach advances in environmental management of horticultural crops.

# **Theory**

#### UNIT I

Environmental complex, interaction of ecological factors in horticultural crop production, interaction of physiographic factors in horticultural crop production. Geo-chemical and hydrological cycles and their impact on ecosystems.

#### **UNIT II**

Global warming- carbon trading role of green house gases, elevated CO<sub>2</sub> and its impact on productivity of horticultural systems. Habitat ecology, changes in habitats and its impact on horticultural production, Habitat analysis, conservation biology, domestication. Forest ecosystem and its evolution to a hort-ecosystem.

## **UNIT III**

Phytogeography. changes in land use pattern and its impact on horticultural crop production. Natural resource management in horti-systems. Subsistence farming systems of the world, threat and challenges.

#### **UNIT IV**

Envoronmental pollution in horti systems, chemicals, fertilizers, etc. Waste management in processing industry, phytoremediation. Alternate farming systems, horticultural therapy Environmental policy& legislation in India, International treatise and Summit, Biodiversity Board, Act, etc.

#### **Practical**

Phyto-sociological analysis, assessment of plant associations in natural and domestic systems, productivity assessment of various ecosystems, analysis and assessment of various phytogeographic zones, assessment of land use changes and its impact on horticultural systems, assessment of biodiversity, pesticide residue analysis in horticultural produce.

# PHT: 501 PRINCIPLES OF POST- HARVEST MANAGEMENT FOR PRISHABLE HORTICULTURAL PRODUCE (1+1)

Structure and composition of fruits and vegetable; Role of fruits and vegetables including mushrooms in nutritional security. Maturity indices, harvesting, grading methods; Physicochemical change during ripening and storage; physiological processes - respiration, transpiration and ethylene biosynthesis and their influence on storage quality and senescence; Pre- storage treatments for quality retention and regulation of ripening using chemicals, Skin coatings, Growth regulators, fungicides; Irradiation; Packages and packing house operations; Storage systems. Pre - cooling, Low temperature controlled Atmosphere (CA), Modified Atmosphere (MA) and Hypobaric storage; On- farm storage; Storage requirements of different fruit, vegetables and mushrooms; Processing of mushrooms, storage disorders; Spoilage and their control; Transportation, marketing and export requirement.

### **Practical**

Determination of maturity indices for fruits and vegetables; Postharvest treatments with waxes, growth regulators; fungicides and their effect on storage behaviors; Storage methods and quality evaluation during storage; Studies on storage disorders; Determination of respiration rates, ethylene evolution, practices in packaging; Visit to cold storage and other institution engaged in post harvest handling and marketing of fruit, vegetables and mushrooms.

# **Suggested Books:**

- 1. Agrawal, R.K. and C.L.Jandaik, 1986.Mushroom Cultivation in India. Official Publication of Indian Mushroom Growers Association, Solan, H.P.
- 2. Burton, W.G. (1982).Post harvest technology of fruits and vegetables. Blackwell Science Ltd., Oxford, U.K.
- 3. Chadha.K.L.and O.P.Pareek 1993.(Eds.).Advances in Horticulture. Vol 1-4. Malhotra Publishing House. New Delhi.
- 4. Chadha, K.L and G. Kallo (Eds.).1993.Advances of Horticulture. Vol.5-6. Malhotra Publishing House. New Delhi.

# PHT:502 FUNDAMENTALS OF PROCESSING OF FRUIT AND VEGETABLES (1+1)

Importance of processing in horticulture development. History of preservation. Nutritive value of processed fruits and vegetables. Role of micro- organisms, enzymes and water activity in preservation, principles

and methods of preservation by heat, chemical, drying, radiation, freezing and fermentation. Modern methods of drying and dehydration. Drying equipment. Intermediate moisture foods. Role of fermentation for different fermented products. Methods of preparation of confectionery and tomato products. Canning of fruits and vegetables. Preserving of fruit juices, beverages and concentrates. Fundamentals of freezing of fruits and vegetables. Packaging and storage of processed fruit and vegetable products Management of different processed wastes. Food processing and nutrition. Importance of hygiene and sanitation. Food laws. hazard analysis and critical control points (HACCP), TQM, GMP, Investment analysis.

#### **Practical**

Blanching and its effect on enzymes. Preparation of different products as per food laws and regulations. Extraction of pectin and its evaluation. Dehydration, canning, freezing, chemical preservation and fermentation. Evaluation of food nutrients. Visit to fruit and vegetable processing plants. HACCP.

# **Suggested Books:**

- 1. Cruss, W.V.1958.Commercial Fruit and Vegetable Products.Mc Grew Hill Book Company, Inc., New York.
- 2. Desrossier, N.W.1970.The Technology of food preservation.3<sup>rd</sup> Ed; AVI Publishing Co. Westport.
- 3.Lal,G.,G.S.Siddappa and G.L.Tondon.1986.Preservation of Fruits and Vegetables.ICAR,,New Delhi.
- 4. Luh, B.S. and J.G.Woodroof.1975.Commercial Vegetable Processing.AVI Pub.Co., Westport.

# PHT:503 LABORATORY ANALYSIS AND QUALITY ASSURANCE TECHNIQUES OF FRESHAND PROCESED HORTICULTURAL PRODUCE (1+1)

Objectives and importance; Functions and methods of quality assessment of fruit and vegetable products; Specification of finished products; Food laws and regulation Acts viz., F.P.O., PFA, Codex Alimentarius etc. Principles and techniques of analysis of proximate composition of fruit and vegetables and their products; Interpretation of laboratory analysis in relation to product quality; Chemical and physical nature of food additives, sensory evaluation of food, estimation of food additives, colour evaluation with respect to the value, hue and chrome; Texture, tenderness and consistency evaluation; Laboratory examinations of canned products - drained weight, vacuum/pressure, head space, water activity, pH, vitamins and microbial quality. Sampling

techniques, Statistical Quality Control, Modeling, Total quality management, HACCP. Microbial spoilage of fresh and processed horticultural produce.

#### **Practical**

Demonstration of measurement of vacuum/pressure, head space, field weight, drained weight, cut-out analysis and chemical additives; Estimation of chemical constituents like 0 Brix, vitamins, etc.; Evaluation of typical products according to food laws. HACCP exercise, problem solving techniques, Group discussion.

# **Suggested Books:**

- 1.AOAC 1970.Official Methods of Analysis, Washington DC.
- 2.Kramer, A. and B.A.Jurigg, 1970. Quality control for the food Industry. AVI pub. Co., Westport.
- 3.Plummer,D.T.1990.An introduction to practical biochemistry.Tata Mc Graw Hill Publication co;New Delhi.
- 4.Ranganna,S.1986.handbook of Analysis and Quality control for Fruit and Vegetable products. Tata Mc Graw Hill Publication co; New Delhi.

# PHT:504 TECHNIQUES FOR SENSORY ANALYSIS OF PROCESSED PRODUCE (1+1)

Importance and methods for sensory analysis. Panel selection and training. Requirements of sensory evaluation laboratory. Analysis for appearance, taste, aroma, colour, texture and flavour. Designing of experiments. Handling and interpretation of data. Role of sensory evaluation in product optimization. Sensory analysis for consumer evaluation.

#### **Practical**

Procedure for sensory analysis. Identification of basic taste, odour, texture and colour. Determination of the threshold activity. Hedonic testing. Testing of individual and overall quality by ranking. Selection of panel. Optimising a product by sensory analysis.

### **Suggested Books:**

- 1. Amerine, M.A.1965.Methods in Sensory Analysis.AVI Pub.Co., Westport.
- 2. O'Mahony, 1985.Sensory Analysis of Foods: Statistical Methods. Marcel Dekker, Basal.
- 3. Piggot, J.R.1985.Sensory Analysis.Elsevier, Netherlands

# PHT: 505 PRE-HARVEST PRACTICES AFFECTING POST- HARVEST LIFE OF PERISHABLE HORTICULTURAL PRODUCE (2+0)

Influence of pre-harvest crop management viz. Fertigation, irrigation, growth regulators, environmental, varietals and cultural operation on post harvest quality of horticultural produces. Effect of organic farming and eco - friendly crops management on quality of horticultural produce.

# **Suggested Books:**

- 1. Bose, T.K. and S.K.Mitra (Eds.).1996.Fruits: Tropical and subtropical.Nayaprokash Pub., Calcutta.
- 2. Pantastico, Er.B. (Eds.) 1975.Postharvest physiology, handling and Utilization of Tropical and Sub-tropical Fruits and Vegetables.AVI Pub. Co. Westport.
- 3. Ryall, A.L.and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and Vegetables Vol.1, Vegetables and Melons, AVI Pub.Co., Westport.
- 4. Ryall, A.L.and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and VegetablesVol.2, Fruits and Tree Nuts. AVI Pub.Co., Westport

# PHT:506 PRINCIPLES OF POST-HARVEST MANAGEMENT OF SPICES AND PLANTATION CROPS (1+1)

Role of plantation crops and spice on economic upliftment of society. Importance and scope; Nature, structure and composition of plantation crops and spices; Maturity indices and harvesting; physiochemical changes after harvest and during postharvest handling, marketing and storage. Quality assurance methods; Packages and packing house operations; Methods of storage precooking, refrigerated, controlled atmosphere, modified atmosphere and hypobaric storage; Storage disorders; Spoilage and its control; Transportation, marketing and storage requirement.

#### **Practical**

Harvesting indices and harvesting methods for different plantation crops and spice crops; postharvest treatments; Packages and Packing; Storage methods and their influence on quality; Study of storage disorders; Visit to cold storage and other institutions engaged in postharvest handling and marketing of plantation crops and spices.

# **Suggested Books:**

- 1. Anonymous, 1985.Rubber and Its Cultivation.the Rubber Board of India, Kottayam.
- 2. Bavappa, K.V.A.1992.Monograph on Aracenut.CPCRI, Kasargod.
- 3. Chadha K.L.and P.Rethinam (Eds.) 1994.Advances in Horticulture.Vol. 9-10.malhotra Publishing House. New Delhi.

4. Patel, I.S.1938.The coconut.A Monograph.Govt.Press, Mardas. 5. The Oil Palm IInd Ed. By C.W.S.Hartley (1977) chapter. 13 & 14

# PHT:507 PRINCIPLES OF POST-HARVEST MANAGEMENT OF ORNAMENTAL, MEDICINAL AND AROMATIC PLANTS (1+1)

Importance and scope; Post harvest physiological and biochemical changers in ornamental, aromatic and medicinal plants; Maturity selection at harvest; Harvesting, grading, bunching of cut flowers; Post-harvest handling of aromatic and medicinal plants; Factors affecting cut flower longevity; Pre-treatments for extending vase life of cut flowers - pre- cooling, use of preservative solution and other chemicals; Recommended storage techniques and condition for ornamental, aromatic and medicinal plants; Importance of cold chain; Storage disorders and their control; preparation of cut flowers for marketing; Transportation, marketing and export requirement.

#### **Practical**

Harvesting indices and equipment; Grading, sorting, cleaning and preparation for marketing; Pre- storage/ packaging treatments to enhance shelf life; Packages and packaging methods; Storage methods and their effect on quality; Storage disorders; Visit to cold storage and other institutions.

### **Suggested Books:**

- 1. Bose, T.K.and P.Yadav. (Eds.) 1989.Commercial Flowers.Naya prokash, Calcutta.
- 2. Bose, T.K. and S.K. Bhattarchjee. 1980. Orchids of India. Naya prokash, Calcutta.
- 3. Chadha, K.L. and B.Choudhry.1986.ornamental Horticulture in india.ICAR, New Delhi.
- 4. Chadha,K.L. and S.K. Bhattarchjee (Eds.)1995.advances in horticulture.Vol.12.Part I-II.Malhotra Publishing House, New Delhi.

# PHT:508 PROCESSING OF PLANTATION CROPS, SPICES, MEDICINAL AND AROMATIC PLANTS (1+1)

Classification of spices and medicinal plants. Commercial uses of spices. Processing of major spices: capsicum, cardamom, ginger, pepper and turmeric, minor spices - coriander, clove, nutmeg, all spice, leafy spices- bay, mint, thyme and curry leaves. Seed spices - fenugreek, mustard and sesame. Dioscorea, liquorice, coleus, ashwagandha, tulsi, isabgol, brahmi. Different methods of drying and storage. Influence of

temperature and time combination on active principles, extraction and analysis of active principle using TLC and HPLC technology of essential oil extraction. Distillation, solvent extraction, super critical fluid extraction from davana, mints, rosemary, rose, citronella, lavender, jasmine, fennel dill. Identification of different odour factors with GLC/GC- MS in essential oil. Processing of plantation produce of plantation crops, viz. Coconut, oilpalm, Cocoa, tea, coffee, rubber etc for value added products.

## **Practical**

Extraction of active ingredients from different spices and herbs. Physico- chemical and sensory evaluation of oils and oleoresin.

# **Suggested Books:**

- 1. Anonymous.Indian Herbal Pharmacopia-AJoint publications of Regional research laboratory, Jammu Tawi and India manufacture Association, Mumbai.
- 2. Chadha, K.L.and Rajendra Gupta (Eds.) 1995.Advances in Horticulture.Vol. 11. Medicinal and Aromatic Plants.Malhotra Publishing house, New Delhi.
- 3. Guenlther, E.1949.The Essential Oils.D.vanNostrand Co., Demonstration.
- 4. Masada, Yoshiro.1986.Analysis of Essential Oil by gas Chromatography and mass Spectrometry.A Halsted Press Book, John Wiley &Sons, New Delhi.

# PHT:509 PACKAGINGS FOR PERISHABLE HORTICULTURAL PRODUCE (1+1)

Importance, package design and package type: bags, wooven baskets, field containers, plastic crates, palletization, utilization. Fiberboard boxes, nature of packaging material, MAP, cooling of produce in package dimension. storage, package testing, consumer packaging.

#### **Practical**

Survey of packages, effect of packaging on storage life and quality, precooling, Map, consumer packaging, testing of package and packaging materials.

# **Suggested Books:**

- 1. Pantastico, Er.B. (Ed.), 1975.Postharvest Physiology, Handling and Utilization of Tropical and Subtropical Fruits and Vegetables.AVI Pub.Co.,Westport.
- 2.Ryall,A.L. and W.J. Lipton,1979.handling,Trasportation and Storage of Fruits and Vegetables,Vol.1,vegetables and Melons,AVI Pub. Co.Westport.

- 3. Ryall, A.l. and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and Vegetables, Vol.1, vegetables and Melons, AVI Pub. Co.Westport.
- 4. Thompson, A.k.1996.Post-harvest technology of Fruits and Vegetables. Blackwell Sci.Ltd., Oxford.

# PHT:510 PACKAGING TECHNOLOGY OF PROCESSED HORTICULTURAL PRODUCE (2+1)

Introduction, history, evolution, function and scope of packaging. Packaging materials- paper based packaging, plastic, glass containers, metal packaging, natural material. Graphics and package design. Packaging machinery - bottling, canning operations, wrapping, operations, bag manufacturing, filling and closing, cartoning, fill and seal machines, and labeling. Organization of packaging lines. Packaging for physical distribution. Packaging needs for marketing of heat-processed, refrigerated and frozen foods, and fruit juices. Bulk Packaging .Specifications and quality control. Future thrusts and scope of packaging technology.

#### **Practical**

Demonstration of different packaging systems. Evaluation of different packaging materials, Exercises in packing of fresh fruit and vegetables and their products. Visit to package fabrication industries. Visit to supermarkets for familiarization with existing packages and innovative trends.

# **Suggested Books:**

- 1. Pantastico, Er.B. (Ed.), 1975.Postharvest Physiology, Handling and Utilization of Tropical and Subtropical Fruits and Vegetables.AVI Pub.Co.,Westport.
- 2.Ryall,A.L. and W.J. Lipton,1979.handling,Trasportation and Storage of Fruits and Vegetables,Vol.1,vegetables and Melons,AVI Pub. Co.Westport.
- 3. Ryall, A.l. and W.T.Pentzer, 1982. Handling, Transportation and Storage of Fruits and Vegetables, Vol.1, vegetables and Melons, AVI Pub. Co. Westport.
- 4. Thompson, A.k.1996.Post-harvest technology of Fruits and Vegetables. Blackwell Sci.Ltd., Oxford.

#### PHT:511 PROCESS ENGINEERING IN HORTICULTURAL CROPS (2+1)

Importance and scope, conveying and elevating equipment, physical and thermal properties of horticultural commodities; Rheological and textural properties; Heating processes; Thermal process calculation; Heating equipment applied to processing viz., jacketed pan, plate and tubular heat exchanger; Evaporator in food industries, multiple effect and multistage evaporator, size reduction; Features and design specification; Planning for domestic as well as commercial storage and processing facilities; Drying equipment; Classification of filtration equipment and outline; Equipment in cannery; Kinetics of growth and enzyme reactions; Fermentation; Equipment and product recovery; Discharge of industrial waste; Freezing equipment. Unit operations of processing.

#### **Practical**

Handling of harvesting equipment; Determination of physical and thermal properties, thermal process calculations; Particle size analysis; Storage structure design; Numerical problems in freezing, drying, conveying and calculations pertaining to texture and rheology; Handling of heating equipment, pulper, juice extractor, deaerator, juice filters; Processing industries waste treatment; Working of a canning unit; Visit to commercial processing units and storage units.

#### **Suggested Books:**

- 1. Earle, R.L.1966.unit Operation and Food Processing.Pergamon Press, Oxford, U.K.
- 2. Paleg and Bagley.1987.Physical Properties of Foods.AVI Pub.Co.,Westport.
- 3. Stumbo, 1965. Thermobacteriology in Food Processing. Academic Press, New York

### PHT:512 IN - PLANTS TRAINING (NON CREDIT COMPULSORY COURSE)

The student will be attached to a commercial ware-house, packing yard or processing plants where he will receive practical training in various aspects of post- harvest handling viz., harvesting, sorting and grading, pre- storage treatments, packing, storing, transport, marketing, processing etc. In the processing plants, he will attend to various unit operations involved in the processing of different fruit and vegetable products. He will maintain daily production schedule of finished products and utilisation of raw material. He will be required to submit a detailed report of his training along with a layout plan of the unit attended by him.

# PHT:601 ADVANCES IN POST - HARVEST MANAGEMENT OF FRESH HORTICULTURAL PRODUCE (2+0)

Respiration and ripening, climacteric phenomenon, ethylene factor, ripening process. Biosynthesis of ethylene and its regulation. Ethylene action and metabolism. Physiology of CA and MA packaging and storage. Gas exchange. Enzymes and textural changes during ripening. Molecular biology of ripening. Polyphenol oxidases, peroxidase and catalyses in fruits and vegetables. Anthocyanins and other pigments in fruits and vegetables. Active packaging, Irridiation technology, vapour heat treatment technology etc.

# **Suggested Books:**

- 1. Pantastico, Er.B. (Eds.) 1975.Postharvest physiology, handling and Utilization of Tropical and Sub-tropical Fruits and Vegetables.AVI Pub. Co. Westport.
- 2. Ryall, A.L.and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and VegetablesVol.1, Vegetables and Melons, AVI Pub.Co., Westport.
- 3. Ryall, A.L.and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and VegetablesVol.2, Fruits and Tree Nuts. AVI Pub.Co., Westport

# PHT:602 IN LABORATORY TECHNIQUES AND RESEARCH METHODOLOGY IN POST HARVEST TECHNOLOGY (1+2)

Advances in techniques of food analysis for carbohydrate, organic acids, vitamins, polyphenols, flavonoids, minerals, anthocyanins, enzymes; Rheological techniques and instrumentation used in food industry; Determination of browning and associated reaction in processed foods and their implication; Pesticide residues; Sprout inhibitors; principles of chromatography (GC, GC-MS, HPLC), spectrophotometer (Atomic absorption spectrophotometer, ICAP spectrophotometer), NMR, ESR, amino acid analyser, flame photometry, electrophoresis, colour measurements in foods, IRGA, Radio - isotopic techniques.

#### **Practical**

Handling and working of food analysis equipment viz., GC, HPLC, spectrophotometer (AAS, ICAP spectrophotometer), NMR, flame

photometer, electrophoresis; Energy calculation, Sample calculations, Rheological behavior of different foods.

# **Suggested Books:**

- 2.Kramer, A. and B.A.Jurigg, 1983. Quality control for the food Industry. AVI pub. Co., Westport.
- 3.Plummer,D.T.1990.An Introduction to practical biochemistry.Tata Mc Graw Hill Publication co;New Delhi.
- 4.Ranganna,S.1986.Handbook of Analysis and Quality control for Fruit and Vegetable products. Tata Mc Graw Hill Publication co; New Delhi.

# PHT:603 ADVANCES IN PROCESSING TECHNOLOGY OF HORTICULTURAL CROPS (3+0)

World food problems and preservation; Cryobiology; Recent trends in thermal processing; Ultra high temperature processing; Aseptic packaging; Microwave energy in processing; Use of ultrasonic waves in technology; High pressure processing; Membrane Extrusion cooking; Irradiation; Intermediate moisture Concentrated foods; Split processing; Developments in food additives; Natural colourants: Flavour stabilization and encapsulation: Enzymes in food processing; Immobilization of enzymes and microbes; Trends in food fermentation; Biotechnology in post-harvest management. Aerated foods; Food fortification; genetically modified foods. Probiotics; Bacteriocins; Health and formulated foods and fast food technology; Problems associated with new technologies.

# **Suggested Books:**

- 1. Earle, R.L.1966.unit Operation and Food Processing.Pergamon Press, Oxford, U.K.
- 2. Paleg and Bagley.1987.Physical Properties of Foods.AVI Pub.Co., Westport.
- 3. Stumbo, 1965. Thermobacteriology in Food Processing. Academic Press, New York

# PHT: 604 PACKING HOUSE OPERATIONS AND TRANSPORTION OF FRESH HORTICULTURAL PRODUCE (2+0)

Quality, losses and production factors, harvest maturity and methods, post harvest treatments, pack house operations - loading and unloading of produce, pre-treatments, grading, post-grading treatments, packaging methods.

# **Suggested Books:**

- 1. Pantastico, Er.B. (Ed.), 1975.Postharvest Physiology, Handling and Utilization of Tropical and Subtropical Fruits and Vegetables.AVI Pub.Co., Westport.
- 2.Ryall,A.L. and W.J. Lipton,1979.handling,Trasportation and Storage of Fruits and Vegetables,Vol.1,vegetables and Melons,AVI Pub. Co.Westport.
- 3. Ryall, A.l. and W.T.Pentzer, 1982.Handling, Transportation and Storage of Fruits and Vegetables, Vol.1, vegetables and Melons, AVI Pub. Co.Westport.
- 4. Thompson, A.k.1996.Post-harvest technology of Fruits and Vegetables. Blackwell Sci.Ltd., Oxford.

# PHT:605 COMMERCIAL ASPECTS OF POST- HARVEST TECHNOLOGY OF HORTICULTURAL PRODUCE (2+0)

Design and layout of fruit and vegetable processing industry; packing station for handling of fresh commodities, cool chain; marketing channels, import- export trade; investment analysis; concept of marketing. List of equipments.

# **Suggested Books:**

1.Chadha, K.L.and Others.(Eds.)1993-1995.Advances in Horticulture.Vol 1-3.Malhotra Publishing house.New Delhi.

2.lal,G.,G.S. Siddappa and G.L. Tondon,1986.Preservation of Fruits and Vegetables.ICAR,New Delhi.

3.Luh B.S.and J.G.Woodroof,1982.Commercial Vegetable Processing.AVI Publ.Co.,Westport.

4. J.G.Woodroof,and Luh B.S.1982.Commercial Fruit Processing.AVI Publ.Co., Westport.

#### PHT:606 DEHYDATION TECHNOLOGY OF HORTICULTURAL PRODUCE(2+1)

Introduction - principles, importance, history and scope of drying. Equilibrium relative humidity (ERH), water activity and food stability. Methods of drying (foam mat, osmotic and reverse osmotic drying, Freeze drying, accelerated freeze drying, dehydro- freezing) and equipment. Home scale and commercial drying of perishables including flowers. Fruit juice concentration and powders. Drying of commercial fruits and vegetables. Effect of drying on product quality and storability. FPO and ISI specifications for dried products.

#### **Practical**

Drying of some important fruits and vegetables. Drying rates and dehydration rations. Determination of water activity. Evaluation of dried products. Visit to dehydration industries.

# **Suggested Books:**

- 1. Cruss, W.V. 1958. Commercial Fruit and Vegetable Products.Mc Graw Hill Book Company,Inc.,New York.
- 2.Lal, G., G.S. Siddappa and G.L. Tondon, 1986. Preservation of Fruits and Vegetables.ICAR,New Delhi.
- 3. Luh B.S. and J.G. Woodroof, 1982. Commercial Vegetable Processing. AVI Publ.Co., Westport.
- 4. J.G.Woodroof, and Luh B.S. 1982. Commercial Fruit Processing. AVI Publ.Co., Westport

# PHT:607 FREEZING TECHNOLOGY OF HORTICULTURAL PRODUCE (2+1)

Introduction, cryobiology, principles of freezing, equipment, methods of freezing. IQF, quality of thawed products, spoilage of frozen products, Numerical problems on specific food freezing. Effect of freezing on nutritive value. Quality control, sensory evaluation, cryogenic preservation of products. Problems associated with food freezing.

#### **Practical**

Slow and fast freezing of fruits/ vegetables. Quality of frozen foods. Numerical problems. Visit to a food freezing unit.

# **Suggested Books:**

1.Tressler, D.K., W.B. van Arsdel and M.J. Copley, 1968. Freezing Preservation of Foods. Vol. I-IV. AVI Pub. Co., Westport.

# PHT:608 FRUIT AND VEGETABLE FERMENTATION TECHNOLOGY (2+1)

Introduction-definition, history, importance and scope. Role of fermentation in preservation. Nutritive value of wines, beers, distilled liquors and fermented vegetables. Yeast and its requirements. General methods of fermentation. Types and methods of preparation of wines, beer, cider, vermouth, brandy and their role in human health. Vinegar and lactic acid fermentation and their uses. Fermentation technology for waste treatment. Equipment and machinery used in a brewery or alcohol manufacturing plant. Quality attributes of alcoholic and other fermented products. Spoilage of fermented products and their control measures. Biochemical changes caused by fermentation and factors affecting fermentation types.

#### **Practical**

Isolation and culture of yeast and lactic acid micro-flora. Preparation of wines, brandy, cider and fermented pickles. Analysis for alcohol, acidity (total and volatile), TSS, pH, sugars and sensory attributes.

# **Suggested Books:**

- 1. Amerine et al. 1980. technology of Wine Making. AVI Publ. Co., Westport.
- 2.Potter, N.1978.Food Science. AVI Publ. Co., Westport.
- 3.Reed,G.1999.Prescott and Dunn's Industrial Microbilogy.CBS Publ. and Distributers.new Delhi.
- 4. Vine, R.P. 1981. Commercial wine Making. AVI Publ. Co. Inc. Westport.

# PHT:609 WASTE MANAGEMENT FROM HORTICULTURE PROCESSING INDUSTRIES (2+1)

Need for waste management. Waste Characteristics - sampling methods, analysis, and standards for waste discharge. Survey and nature of waste from processing industry. Methods for waste and waste water reduction. In plants modifications and innovative processes. Recovery of useful materials from waste viz., colour, essence, pectin, oils etc. Utilization of waste - new products, animal feed, and single cell protein. Technology of treatments of waste effluent from fruit and vegetable industries. Immobilized bioreactor in waste treatment. Anaerobic bioreactor and energy production. Economics of effluent management.

#### **Practical**

Analysis of waster. Waste utilization from recovery of useful material. Commercial products from waste. Visit to fruit and vegetable industries equipped with waste disposal system.

# **Suggested Books:**

- 1.Green and Kumar,1979.Waste Management Technology.AVI Publ.Co.,Westport.
- 2.Joshi, V.K. and A.pandey, 1999. Biotechnology: Food Fermentation. Vols. I & II, educational Publisher and Distrivbuter, new delhi.
- 3.Pandey, A.1998. Advances in Biotechnology: Educational Publisher and Distributor. New Delhi.
- 4.Salunkhe, D.K. and S.S.kadam. 1995. A handbook of fruit Science. Marcel dekker, Basal.

### POST HARVEST TECHNOLOGY

### **List of Journals**

- Journal of American Society of Horticulture Sciences
- Haryana Journals of Horticulture Science
- Journal of Food Science and Technology
- Journal of Post Harvest Biology and Technology
- Journal of Spices Crops
- Indian Journal of Agricultural science
- Journal of Spices and Aromatic Plants
