

Plantation programme organized at Agricultural Research Station, Sansoli

There are many environmental benefits of planting trees. Strategically [planting trees](#) will bring life to area, improve quality of life, reduce soil erosion and help climate change. Trees also come with tons of other benefits such as reducing noise, protecting us from harmful ultraviolet rays, lowering frost in agricultural areas, improving our health, and reducing stress. There is more room for sustainable companies that aim at creating products that cause less damage to the environment. Whether is adding another seedling to a forest or adding one in your garden, planting a tree is always a good idea.

Plantation programme organized at Agricultural Research Station, Sansoli. Dr. D. B. Prajapati, Associate Research Scientist and Head, Dr. B. N. Thakker, Assistant Extension Educationist, Dr. M. B. Zala, Assistant Research Scientist, Dr. Tarak Patel Research Associate and other staff participated in the programme.
